Abstract

A Mendelsohn triple system of order $v$ (or MTS($v$)) is a decomposition of the complete graph into directed 3-cycles. We denote the directed 3-cycle with edges $(x, y)$, $(y, z)$ and $(z, x)$ by $(x, y, z)$ or $(y, z, x)$ or $(z, x, y)$.

An $\ell$-good sequencing of a MTS($v$) is a permutation of the points of the design, say $[x_1 \cdots x_v]$, such that, for every triple $(x, y, z)$ in the design, it is not the case that $x = x_i$, $y = x_j$ and $z = x_k$ with $i < j < k$ and $k - i + 1 \leq \ell$; or with $j < k < i$ and $i - j + 1 \leq \ell$; or with $k < i < j$ and $j - k + 1 \leq \ell$.

In this report we provide a maximum $\ell$-good sequencing for each MTS($v$), $v \leq 10$.

1 Introduction

It is in \cite{4} that $\ell$-good sequencings of Mendelsohn triple systems are first introduced and this paper is where we direct the interested reader to find definitions, fundamental results and constructions. In particular, it is well

known that an MTS\((v)\) exists if and only if \(v \equiv 0\) or 1 (mod 3), \(v \neq 6\). In [4], it is shown that, if an MTS\((v)\) has an \(\ell\)-good sequencing, then \(\ell \leq \left\lfloor \frac{v-1}{2} \right\rfloor\).

In Table 1, we report, for \(v \leq 10\), the number of nonisomorphic MTS\((v)\) that have an \(\ell\)-good sequencing. If each triple \((x, y, z)\) in a Mendelsohn triple system is replaced with the 3-element subset \(\{x, y, z\}\), a twofold triple system of order \(v\) (i.e., a TTS\((v)\)) is obtained. This is a decomposition of \(2K_v\), the double of the complete graph, into triangles. Alternatively, starting with a TTS\((v)\), it may be possible to orient each of the triangles to obtain a MTS\((v)\). Such TTS\((v)\) are said to be orientable. The numbers of nonisomorphic TTS\((v)\), orientable TTS\((v)\) and nonisomorphic MTS\((v)\) were previously reported in [1]. We confirm their results.

In the following sections, we denote the \(i\)-th orientable TTS\((v)\) by \(\mathcal{T}_v.i\). The \(j\)-th MTS\((v)\) whose underlying TTS\((v)\) is \(\mathcal{T}_v.i\), is denoted by \(\mathcal{M}_v.i.j\).
2 Orientable TTS(7)s

There are 3 TTS(7) that are orientable. They are listed in Section 2.1. The MTS(7) that can be obtained by orienting the TTS(7) are listed in Section 2.2.

4 Orientable TTS(10)\text{s}

There are 134 TTS(10), that are orientable. They are listed in Section 4.1 and labeled $\mathcal{T}_{10i}$, $i = 1, 2, \ldots, 134$. Following label $\mathcal{T}_{10i}$ in brackets is the label of the same twofold triple system found in [2] and [3]. The MTS(10) that can be obtained by orienting the TTS(10) are listed in Section 4.2. The five MTS(10) that do not have a 4-good sequencing are $\mathcal{M}_{101161}$, $\mathcal{M}_{101162}$, $\mathcal{M}_{101181}$, $\mathcal{M}_{101341}$ and $\mathcal{M}_{101342}$. If any triple is omitted from one of these five MTS(10), then the resulting “partial” MTS(10) having 29 triples turns out to have a 4-good sequencing. These 4-good sequencings are reported in Section 4.3.

4.1 Orientable TTS(10).

4.3 The five special MTS(10).

In this section we provide a 4-good sequencing for the “partial” MTS(10) obtained by deleting a triple from one of the five MTS(10), that do not have a 4-good sequencings.
