## Abstract

The Hall-symbols for describing unambiguously the generators of space groups have been extended to describe whatever setting of the 1651 types of magnetic space groups (Shubnikov groups). A computer program called MHALL has been developed for parsing the Hall symbols, generate the full list of symmetry operators and identify the transformation to the standard setting.

## Introduction

The international symbols for crystallographic space groups (CSG) are based in the Hermann-Mauguin (HM) symbols containing information about the Bravais lattice of the translation subgroup and the nature and orientation of the symmetry elements. However, as pointed out by S.R. Hall (Hall, 1981), there is no explicit information about the position of the origin determining partially the translational part of the symmetry operators. This has, consequently, an important drawback: the impossibility of generating the full set of symmetry operators from the symmetry elements appearing in the symbol, in the general case, coinciding with the lists of the *International Tables for Crystallography* (ITC). The computer programs, not using a database, doing that task have always some special code to handle special cases in order to generate strictly the same set of operators. The proposal by S.R. Hall (Hall, 1981) solves this problem in an elegant way allowing, at the same time, the possibility of describing reasonable arbitrary settings of CSG. The word “reasonable” is used here to emphasize the fact that the symmetry operators (with rotational part described by an integer matrix) may be very complicated (with rotational part described by a rational matrix) if a unit cell setting, for instance, is selected in which a three-fold axis is along an arbitrary [uvw] direction. However, even in these cases, the Hall-symbol, as treated in (S. R. Hall and R. W. Grosse-Kunstleve, 2010, hereafter referred as HG-K) can be written by using the standard symbols described below followed by a setting change included at the end of the symbol.

In this document, we propose to modify slightly the original Hall-symbols in order to extend them for describing magnetic space groups (MSG). For that, we had to change the original symbol “'” to “^”. The reason is that the prime symbol “'” is reserved for the time reversal operator to be consistent with the currently used symbols in Belov-Neronova-Smirnova (BNS) and Opechowski-Guccione (OG) notations for MSG. Here we will not discuss the derivation of MSG or their relation with families of CSG that may be found in literature (see, for instance, D. Litvin, 2001); we shall be concentrated in the new proposed nomenclature aspects.

The aim of the Hall-symbols is to have an unambiguous descriptor of a CSG or MSG and not to substitute the HM, BNS or OG (or whatever new proposal that may be adopted) symbols used for a standard setting. Once we have a correspondence with the standard setting of CSG or MSG, an appropriate computer program can parse the symbols and generate the full set of symmetry operators. We have to keep in mind that two different Hall-symbols may represent the same space group type in a particular setting. This is

obvious by the fact that we can use different generators to obtain the same full representative operators of the group type.

## New proposed Hall-symbols

This section summarises the notation described in HG-K, and the modifications we propose. The Hall-symbols try to describe a CSG or a MSG using a short set of generators. Each generator corresponds to a Seitz operator acting on atom positions or on magnetic moments. The action of the operator  $S=\{R, \theta|t\}$  (where  $R$  is a proper or improper rotation matrix,  $t$  is a translation vector and  $\theta$  is an integer representing the time reversal operation) on the atom position  $r$  having a magnetic moment  $m$  is given by:

$$r' = \{R, \theta|t\} r = R r + t \quad (1)$$

The corresponding magnetic moment (axial vector) is obtained as:

$$m' = \{R, \theta|t\} m = \theta \det(R) R m \quad (2)$$

The integer  $\theta$  is equal to -1 if the operator is “primed” (combined with time reversal operator 1') and equal to 1 in the “non-primed” case;  $\det(R)$  stands for determinant of matrix  $R$ . The Hall-symbol is the combination of a series of Seitz operators with a lattice symbol and the presence or not of a centre of symmetry at the origin. Each operator is constituted by a particular notation for the operator  $S$  that describes unambiguously the matrix  $R$ , the value of  $\theta$  and the translation vector  $t$ . The operator  $S$  may be represented as a Seitz matrix or in the extended form (see below) of Jones faithful notation. For instance, a Seitz matrix representing a primed two-fold screw rotation along the b-axis is given by:

$$2_1^{y'} = \{2'_0 | 0, \frac{1}{2}, 0\} = \begin{pmatrix} R & t \\ 0 & 1 \end{pmatrix}^\theta = \begin{pmatrix} -1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1/2 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & 1 \end{pmatrix}'$$

Notice that we have no way to explicitly writing the time reversal operator within the matrix; only the knowledge of the presence of time reversal is used in applying effectively the equations (1) and (2). The same operator in Jones faithful notation (extended with 1 or -1 in the last position representing  $\theta$ ) can be written as:  $-x, y+1/2, -z, -1$ , which is more compact than the full matrix. We will use this last representation instead of matrices hereafter.

The newly proposed Hall-symbols have the general form (compare to equation A1.4.2.4 in HG-K):

$$\mathbf{L} [N_t^{A\theta}]_1 [N_t^{A\theta}]_2 \dots [N_t^{A\theta}]_p \mathbf{V} \quad (3)$$

The symbol  $\mathbf{L}$  is the lattice symbol,  $\mathbf{L}=P, A, B, C, I, R, H, F, X$ . The symbol may include a preceding minus sign for indicating that a centre of symmetry exists at the origin. The  $X$  symbol is used for non-

conventional lattice centring, in such a case the explicit generators of the lattice must be provided within the  $p$  provided operators. The operators related with the **L** symbols are described in Table 1.

**Table 1: Lattice symbols **L**** (similar to table A1.4.2.2. in HG-K)

The lattice symbol **L** implies the following generators in Jones' faithful notation. The identity is always implied even if not provided, the time reversal operator is provided as the last item, the different generators are separated by “;”. In the general case, X, we have used the notation  $1\mathbf{t} \equiv x+t_1, y+t_2, z+t_3$ , 1 where  $\mathbf{t} = (t_1, t_2, t_3)$ , with  $t_i$  rational numbers.

P: $x, y, z, 1$	-P: $-x, -y, -z, 1$
A: $x, y+1/2, z+1/2, 1$	-A: $-x, -y, -z, 1; x, y+1/2, z+1/2, 1$
B: $x+1/2, y, z+1/2, 1$	-B: $-x, -y, -z, 1; x+1/2, y, z+1/2, 1$
C: $x+1/2, y+1/2, z, 1$	-C: $-x, -y, -z, 1; x+1/2, y+1/2, z, 1$
I: $x+1/2, y+1/2, z+1/2, 1$	-I: $-x, -y, -z, 1; x+1/2, y+1/2, z+1/2, 1$
R: $x+2/3, y+1/3, z+1/3, 1; x+1/3, y+2/3, z+2/3, 1$	-R: $-x, -y, -z, 1; x+2/3, y+1/3, z+1/3, 1; x+1/3, y+2/3, z+2/3, 1$
H: $x+2/3, y+1/3, z, 1; x+1/3, y+2/3, z, 1$	-H: $-x, -y, -z, 1; x+2/3, y+1/3, z, 1; x+1/3, y+2/3, z, 1$
F: $x+1/2, y+1/2, z, 1; x, y+1/2, z+1/2, 1; x+1/2, y, z+1/2, 1$	-F: $-x, -y, -z, 1; x+1/2, y+1/2, z, 1; x, y+1/2, z+1/2, 1; x+1/2, y, z+1/2, 1$
X: $1\mathbf{t}_1 ; 1\mathbf{t}_2; \dots 1\mathbf{t}_p$	-X: $-x, -y, -z, 1; 1\mathbf{t}_1 ; 1\mathbf{t}_2; \dots 1\mathbf{t}_p$

The symbol  $N$  is 1, 2, 3, 4 or 6 for proper rotations and  $\bar{1}, \bar{2}, \bar{3}, \bar{4}$  or  $\bar{6}$  (or in text-only characters -1, -2, -3, -4 or -6) for improper rotations (the symbol -2 corresponds to mirror or glide planes depending on the associated translation). The symbol  $\theta$  is “ ‘ ” when the operator is associated with time reversal or it is absent otherwise. The symbol  $A$  indicates the direction of the rotation axis. The possible values of  $A$  are  $x, y, z, ^, *$  and  $*$ , for rotation axis along **a**, **b**, **c**, **a-b** (or alternatively **b-c** or **c-a**), **a+b** (or alternatively **b+c** or **c+a**) and **a+b+c**, respectively. The  $t$  translation symbols are 1, 2, 3, 4, 5, 6,  $a, b, c, n, u, v, w, d$ . They are described in Table A1.4.2.3 of HG-K. This table is reproduced below as Table 2. Even if not explicit in Table 2, the symbols of screw axes  $4_2$  and  $6_3$  (with translation of  $1/2$  along the axis  $A$ ) are legal Hall symbols and may be written as  $4_c$  and  $6_c$  if they are oriented along the **c**-axis. These translations apply additively [e.g.  $ad$  signifies a  $(3/4, 1/4, 1/4)$  translation]. Notice that we can use, for anti-translations, a lattice symbol instead of two translation symbols. For instance, the following symbols are equivalent:  $1'_{bc} = 1'_A, 1'_{ac} = 1'_B, 1'_{ab} = 1'_C, 1'_n = 1'_I$

Examples of valid symbols for the  $[N_t^{A\theta}]$  generators are:  $4_a^x, -2_n^z, 3_1^*, \bar{1}_{avw}, 1_{ad}'$ ; representing respectively the operators (in Seitz notation, see Glazer *et al.*, 2014):

$$\{4_{100}^+ | \frac{1}{2}, 0, 0\}, \{m_{001} | \frac{1}{2}, \frac{1}{2}, \frac{1}{2}\}, \{3_{111}^+ | \frac{1}{2}, \frac{1}{2}, \frac{1}{2}\}, \{\bar{1}' | \frac{1}{2}, \frac{1}{4}, \frac{1}{4}\}, \{1 | \frac{3}{4}, \frac{1}{4}, \frac{1}{4}\}$$

The change of basis operator  $\mathbf{V}$  is optional and may be used as described in HG-K; however, we propose an alternative change of notation that is more clearly related to its purpose: a change of reference frame,

**Table 2: Translation symbols  $\mathbf{t}$**  (same as table A1.4.2.3. in HG-K)

Alphabetical symbols (given in the first column) specify translations along a fixed direction. Numerical symbols (given in the third column) specify translations as a fraction of the rotation order  $|N|$  and in the direction of the implied or explicitly defined axis. Putting several symbols together means the addition of the translation vectors corresponding to the given symbols.

Translation Symbol	Translation Vector	Subscript Symbol	Fractional Translation
$a$	$1/2, 0, 0$	1 in $3_1$	$1/3$
$b$	$0, 1/2, 0$	2 in $3_2$	$2/3$
$c$	$0, 0, 1/2$	1 in $4_1$	$1/4$
$n$	$1/2, 1/2, 1/2$	3 in $4_3$	$3/4$
$u$	$1/4, 0, 0$	1 in $6_1$	$1/6$
$v$	$0, 1/4, 0$	2 in $6_2$	$1/3$
$w$	$0, 0, 1/4$	4 in $6_4$	$2/3$
$d$	$1/4, 1/4, 1/4$	5 in $6_5$	$5/6$

**Table 3: Operators  $[N^A]$**  (similar to table A1.4.2.4. in HG-K)

Jones faithful operators for proper rotations along the three principal unit-cell directions are given below. For improper rotations (-2, -3, -4 and -6) the symbols are identical except that all signs are reversed. The identity 1 ( $x,y,z$ ) and inversion centre -1 ( $-x,-y,-z$ ) are omitted because they do not depend on the axis. The same holds for time reversal.

Rotation Axis	A-symbol	Rotation order and Jones faithful symbol			
		2	3	4	6
<b>a</b>	$x$	$x, -y, -z$	$x, -z, y-z$	$x, -z, y$	$x, y-z, y$
<b>b</b>	$y$	$-x, y, -z$	$z-x, y, -x$	$z, y, -x$	$z, y, z-x$
<b>c</b>	$z$	$-x, -y, z$	$-y, x-y, z$	$-y, x, z$	$x-y, x, z$

involving the basis vectors and origin, to which refer the symmetry operators.

### Default axes from the positional order of operators

The superscripts indicating the direction of rotation axes may be suppressed by adopting the following rules (see section A1.4.2.3.1. in HG-K) for the symbol given in expression (3):

(i) The first rotation (or roto-inversion) axis direction is always along **c**

(ii) The second rotation (if  $|N|$  is 2) axis direction is along **a** if preceded by an  $|N|$  of 2 or 4, it is along **a-b** if preceded by an  $|N|$  of 3 or 6

(iii) The third rotation (if  $|N|$  is 3) has an axis direction of **a + b + c**

This implies that in the major part of cases the symbol “ $\wedge$ ” is not needed. If we ignore these rules, the superscript of the provided operators should be explicitly written. The rotational part of  $[N_t^{A\theta}]$  operators ( $[N^A]$ ) are given explicitly in Tables 3, 4 and 5.

Another additional convention is that anti-translations ( $1_t^-$ ) should appear after the rotational operators and non-conventional lattice translations ( $1_x^-$ ).

**Table 4: Operators  $[N^A]$**  (similar to table A1.4.2.5. in HG-K)

Jones faithful operators for proper two-fold rotations along the diagonal unit-cell directions.

Preceding rotation	Rotation symbol	Axis	Jones faithful symbol
$N^x$	$2^\wedge$	<b>b-c</b>	$-x, -z, -y$
	$2''$	<b>b+c</b>	$-x, z, y$
$N^y$	$2^\wedge$	<b>a-c</b>	$-z, -y, -x$
	$2''$	<b>a+c</b>	$z, -y, x$
$N^z$	$2^\wedge$	<b>a-b</b>	$-y, -x, -z$
	$2''$	<b>a+b</b>	$y, x, -z$

**Table 5: Operator  $3^*$**  (similar to table A1.4.2.6. in HG-K)

Operator for proper three-fold rotation along the body diagonal unit-cell direction.

Rotation symbol	Axis	Jones faithful symbol
$3^*$	<b>a+b+c</b>	$z, x, y$

## New change of basis operator **V**

In HG-K, the authors extend the original shift of origin symbol to a complete change of basis; however, they use a vector form in which a symbol close to Jones faithful representation of symmetry operators is used to represent this time a change of basis. Symmetry operators are implicitly referred to a reference frame  $\{O, \mathbf{a}, \mathbf{b}, \mathbf{c}\}$ , where  $O$  represents a point in 3D space and  $\mathbf{a}, \mathbf{b}, \mathbf{c}$  are the basis vectors. In previous

forms of the Hall-symbol (see HG-K), the operator  $\mathbf{V}$  is represented in vectorial form  $\mathbf{V} = (v_1, v_2, v_3)$  with  $v_i = r_{i1}X + r_{i2}Y + r_{i3}Z + t_i$ , where  $r_{ij}$  and  $t_i$  are rational numbers. The operator can be written as a Seitz matrix as given in HG-K:

$$\mathbf{V} = \begin{pmatrix} r_{11} & r_{12} & r_{13} & t_1 \\ r_{21} & r_{22} & r_{23} & t_2 \\ r_{31} & r_{32} & r_{33} & t_3 \\ 0 & 0 & 0 & 1 \end{pmatrix} \quad (4)$$

In case of a simple change of origin,  $r_{ij}=0$  if  $i \neq j$  and  $r_{ii}=1$ , we conserve the same notation as proposed in (Hall, 1981) and HG-K, where the Hall-symbol finishes with an integer vector in parenthesis of the form  $(n_1, n_2, n_3)$ , meaning  $t_1=n_1/12$ ,  $t_2=n_2/12$  and  $t_3=n_3/12$ .

The meaning of the change of basis operator  $\mathbf{V}$  is the following: the new basis vectors  $\mathbf{a}'$ ,  $\mathbf{b}'$ ,  $\mathbf{c}'$  are obtained as:

$$(\mathbf{a}' \quad \mathbf{b}' \quad \mathbf{c}') = (\mathbf{a} \quad \mathbf{b} \quad \mathbf{c}) \begin{pmatrix} r_{11} & r_{21} & r_{31} \\ r_{12} & r_{22} & r_{32} \\ r_{13} & r_{23} & r_{33} \end{pmatrix} \quad (5)$$

Notice that the  $3 \times 3$  submatrix is transposed to that of  $\mathbf{V}$ . The new origin  $O'$  have coordinates  $(t_1, t_2, t_3)$  with respect to the original  $\{O, \mathbf{a}, \mathbf{b}, \mathbf{c}\}$  basis.

The symmetry operators provided in the Hall-symbol (generators) should be transformed, if the operator  $\mathbf{V}$  is provided, according to the equation:

$$\mathbf{S}'_n = \mathbf{V} \mathbf{S}_n \mathbf{V}^{-1} \quad (6)$$

Where the new operators  $\mathbf{S}'_n$  are now implicitly referred to the basis  $\{O', \mathbf{a}', \mathbf{b}', \mathbf{c}'\}$ .

We maintain the original convention for change of origin but, in order to be compatible with this form, we propose to use the colon ":" as separator between the first part of the symbol and  $\mathbf{V}$  to tell the parsing program that we use the new symbolic form for the  $\mathbf{V}$  operator. So the expression (3), in the general case of basis change, is written as:

$$\mathbf{L} [N_t^{A\theta}]_1 [N_t^{A\theta}]_2 \dots [N_t^{A\theta}]_p : r_{11}a + r_{12}b + r_{13}c, r_{21}a + r_{22}b + r_{23}c, r_{31}a + r_{32}b + r_{33}c; t_1, t_2, t_3 \quad (7)$$

Notice the semicolon separating the "rotational" part of the matrix (4) from the coordinates of the new origin  $(t_1, t_2, t_3)$ .

### Detailed examples

The header "ASCII" given in the examples below means that we use characters from the ASCII character set available in computers and coded with 1 byte (8 bits), so subscripts and superscripts are not used. Instead, the translation symbols are just juxtaposed to the rotational symbols. When using the text (ASCII) form of the Hall-symbols we use one or more spaces between symbols as in:

$$\mathbf{L} \quad [N_t^{A\theta}]_1 \quad [N_t^{A\theta}]_2 \quad \dots \quad [N_t^{A\theta}]_p \quad \mathbf{V}$$

When writing Hall symbol in text-only mode the operator  $[N_t^{A\theta}]$  should be written in the form:

$N'At$ ,  $NA't$  or  $NAt'$  with the axis symbol preceding the translation part. Notice that the prime symbol commutes with the axis and translation symbols.

An example of legal Hall-symbol for a magnetic group is  $P6_c\bar{2}1'$  that in ASCII form is represented as

`P 6c -2 1'c`

or

`P 6c -2 1c'`

The above Hall-symbol corresponds to the MSG  $P_c6_3cm$  (in BNS notation) in the standard setting. We can also use the symbol (see comment above about Table 2): `P 63 -2 1'c` in which the traditional form of a screw axis  $6_3$  is explicitly given.

One can create a Hall-symbol without knowing to which MSG standard type corresponds. A computer program can identify the standard MSG type and calculate the change of basis to obtain the standard setting. For instance, a symbol like  $-P 4n' 1u' (\bar{P}4_n'1_u')$  corresponds to the group  $P_C4_2/m$  ( $P_C4_2/m$ ) in a particular setting. To obtain the standard setting one has to apply the following basis change:  $-\mathbf{a}/4, -\mathbf{b}/4, \mathbf{a}/4, -\mathbf{b}/4, \mathbf{c}; -1/8, -1/8, 0$ .

Let us consider conventional settings of MSG as examples. MSG are usually divided in four types:

**Type-1** MSG, also called colourless groups, are those having  $\theta=1$  for all operators. They are isomorphous to the 230 CSG. The BNS and OG symbols coincide in this case with the HM symbols of CSG. The Hall-symbols are the same as those of the CSG. Examples of the symbols can be found in Table A1.4.2.7 of HG-K.

**Type-2** MSG, also called paramagnetic groups, are those having two set of operators. The first set is the same as those of Type-1 groups and in the second set the operators have  $\theta = -1$  combined with all operators of the first set. Their number is also 230 and the BNS and OG symbols are those of the corresponding CSG followed by the time reversal operator. The Hall-symbols are obtained from the Hall-symbols of Type-1 groups by putting the time reversal operator as the last generator.

Examples:

BNS/OG symbol	BNS/OG ASCII	Compact ASCII	Hall symbol	Hall ASCII
$P4_12_121'$	<code>P 41 21 2 1'</code>	<code>P4_12_121'</code>	$P4_{abw}2_{nw}1'$	<code>P 4abw 2nw 1'</code>
$P4_2/mmcl'$	$P 42/m m c 1'$	$P4_2/mmcl'$	$\bar{P}4_c21'$	$-P 4c 2 1'$

The full set of operators for the first group ( $P4_12_121'$ ) can be obtained by the generators:  $-y+1/2, x+1/2, z+1/4, 1 (4_{abw})$ ;  $x+1/2, -y+1/2, -z+3/4, 1 (2_{nw})$ ;  $x, y, z, -1 (1')$

The full set of operators for the second group ( $P4_2 / mmc1'$ ) can be obtained by the generators:  $-x, -y, -z, 1 (-1); -y, x, z+1/2, 1 (4_c); x, -y, -z, 1 (2); x, y, z, -1 (1')$

**Type-3 MSG**, also called type-1 black and white (BW1) groups, are those having the same lattice as that of the paramagnetic group, but half of operators are associated with time reversal. Their number is 674 and the BNS and OG symbols are the same.

Examples:

BNS/OG symbol	BNS/OG ASCII	Compact ASCII	Hall symbol	Hall ASCII
$Pc'cn'$	$P_c' c_n'$	$Pc'cn'$	$\bar{P}2_{ab}'2_{ac}'$	$-P 2_{ab}' 2_{ac}'$
$P6_2'22'$	$P 62' 2 2'$	$P6_2'22'$	$P6_2'2_e'(001)$	$P 62' 2c' (0 0 1)$

The full set of operators for the first group ( $Pc'cn'$ ) can be obtained by the generators:  $-x+1/2, -y+1/2, z, -1 (2_{ab}'); x+1/2, -y, -z+1/2, -1 (2_{ac}'); -x, -y, -z, 1 (-1)$

The full set of operators for the second group ( $P6_2'22'$ ) can be obtained by the generators:  $x-y, x, z+1/3, -1 (6_2'); -y, -x, -z+2/3, -1 (2c')$ . Notice that the second operator without taking into account the change of origin would have the form:  $-y, -x, -z+1/2, -1$  according to the rule (ii) and Table 4.

**Type-4 MSG**, also called type-2 black and white (BW2) groups, are those containing anti-translations: lattice translations associated with time reversal. Of course, these anti-translations are not lattice vectors. Their number is 517 and the BNS and OG symbols are different. Here we have conserved the columns concerning the ASCII representations of the BNS and OG in compact form.

Examples:

BNS symbol	OG symbol	BNS ASCII	OG ASCII	Hall symbol	Hall ASCII
$F_s dd2$	$P_i nn2$	$F_S dd2$	$P_I nn2$	$F\bar{2}\bar{2}_d1_n'$	$F 2 -2d 1'n$
$P_c bcn$	$C_p m'mm$	$P_C bcn$	$C_p m'mm$	$\bar{P}2_n2_{ab}1_c'$	$-P 2n 2ab 1'c$
$P_c 6_3 cm$	$P_{2c} 6'm'm$	$P_{2c} 6_3 cm$	$P_{2c} 6'm'm$	$P6_c\bar{2}1_c'$	$P 6c -2 1'c$
$F_s d\bar{3}$	$P_F n\bar{3}$	$F_S d\bar{3}$	$P_F n\bar{3}$	$\bar{F}2_{uv}2_{vw}31_n'$	$-F 2uv 2vw 3 1n'$

The full set of operators for the first group ( $F_s dd2$ ) can be obtained by the generators:  $-x, -y, z, 1 (2); -x+1/4, y+1/4, z+1/4, 1 (\bar{2}_d); x+1/2, y+1/2, z+1/2, -1 (1_n')$  and the F-centring translations  $x, y+1/2, z+1/2, 1; x+1/2, y, z+1/2, 1$  and  $x+1/2, y+1/2, z, 1$ .

The full set of operators for the second group ( $P_c bcn$ ) can be obtained by the generators:  $-x+1/2, -y+1/2, z+1/2, 1 (2_n)$ ;  $x+1/2, -y+1/2, -z, 1 (2_{ab})$ ;  $-x, -y, -z, 1 (\bar{1})$ ;  $x+1/2, y+1/2, z, -1 (1'_c)$ .

The full set of operators for the third group ( $P_c 6_3cm$ ) can be obtained by the generators:  $-x-y, x, z+1/2, 1 (6_c)$ ;  $y, x, z, 1 (\bar{2})$ ;  $x, y, z+1/2, -1 (1'_c)$ .

The full set of operators for the fourth group ( $F_s d\bar{3}$ ) can be obtained by the generators:  $-x+1/4, -y+1/4, z, 1 (2_{zuv})$ ,  $x, -y+1/4, -z+1/4, 1 (2_{xuv})$ ;  $z, x, y, 1 (3 \text{ along } \mathbf{a}+\mathbf{b}+\mathbf{c}, \text{ the star symbol in } 3^* \text{ is not needed according to the rule (iii) and Table 5})$ , the centre of symmetry  $-x, -y, -z, 1$  and the F-centring translations.

We provide in the Appendix-I all the standard MSG that are listed together with the Hall-symbols. The newly proposed International symbols (to be discussed in the Commission for Magnetic Structures of the IUCr) for the standard settings are also in the list.

### A console program for calculating symmetry operators from Hall-symbols

We have developed a console program (**MHALL**) that is able to interpret Hall-symbols as described in this document. The program is based in the new version of the CRYSFML library (Gonzalez-Platas *et al.*, 2020) handling general space groups (crystallographic, magnetic and superspace groups). The source code of the library as well as the program is written in the Fortran-2008 standard. The program asks for a Hall-symbol (or a set of generators in Jones faithful notation) as input and produces the full list of operators as well as the corresponding geometric symmetry element symbols (international notation) and the transformation to the standard setting as defined in (Stokes *et al.* 2013). The geometric symmetry element symbols are only provided for not too much involved settings. Two examples of running the program from a Windows console are provided in the Appendix-II. The installation of the program and examples are provided in the supplementary document (Supp-2).

The program is currently available at: <https://code.ill.fr/scientific-software/crysfml-/blob/master/BinariesDistributions/Windows/MHall.zip>

### Conclusions

The extension of the Hall symbols to MSG has been straightforward to implement from the already existing definitions with a minimal change in one axis symbol. The use of the list of standard Hall symbols for the 1651 MSG allows generating, in a faster and compact way, the full list of symmetry operators of these groups. A further extension of Hall symbols is projected for general superspace groups (crystallographic and magnetic) just adding the modulation vectors followed by the phase symbols, commonly used in the current symbols, indicating the translation component for each generator in the additional dimensions.

One of us, N.A.K., acknowledges the financial support by the FILL2030 initiative, a European Union project within the European Commission's Horizon 2020 Research and Innovation program under grant agreement N°731096.

## Appendix-I

List of the standard setting Hall symbols for the 1651 MSG and their correspondence with the conventional BNS and OG symbols. The provided symbols are ordered as in (Litvin, D.B., 2013, *Magnetic Space Group Types*, IUCr e-book). The new ordering, proposed by some member of the Commission for Magnetic Structures of the IUCr, is also provided.

## Appendix-II

### Procedure for installing and running the program **MHALL**

The program **MHALL** is distributed within the file **MHall.zip**. It contains the executable program **MHall.exe** for Windows (64 bits) and **MHall.x** for Linux. For working with the program, the following steps should be respected (this is for Windows, for Linux is similar):

- 1: Extract the files of **MHall.zip** in the directory of your choice
- 2: Open a Windows terminal (using cmd.exe) and go to the previous directory.
- 3: Type **MHall** in the terminal followed by the <Enter> key.
- 4: Introduce the Hall symbol of your choice (or a set of generators in Jones faithful notation separated by semicolons)
- 5: Type the <Enter> key
- 6: For exiting the program you should enter a void Hall symbol.

Notice that the database **magnetic\_data.txt**, by Stokes & Campbell, is provided with the program. If you have already this database in another directory, you may define the environment variable **CRYSFML\_DB** pointing to the directory where **magnetic\_data.txt** is.

The program may be run also by entering the input information in the command line (do not forget to put the information within double quotes). For instance, we can run the program and redirect the standard output to the file **output.txt**:

```
MyPrompt> MHall "x,-y,z+1/4,-1;-x,-y,-z,1;x+1/2,y+1/2,z,1" > output.txt  
MyPrompt> MHall "-F 2yw' -1'n" >> output.txt
```

This allows the preparation of a batch file for testing many examples at the fly. The standard output is sent to **output.txt**

### Examples without entering the input in the command line

*First example:* MSG P\_C4\_2/m using a strange setting (Hall symbol **-P 4n' 1u'**) followed by a change of basis putting back the operators in the standard setting.

```
-----  
MHall: Testing Hall symbols  
-----  
=> Enter the magnetic Hall symbol or a list of generators in Jones'faithful notation:  
  -P 4n' 1u' : -a/4-b/4,a/4-b/4,c;-1/8,-1/8,0  
=> Obtained generators: -y+1/2,x+1/2,z+1/2,-1;x+1/4,y,z,-1;-x,-y,-z,1  
=> Followed by a change of basis: -a/4-b/4,a/4-b/4,c;-1/8,-1/8,0  
=> Newly obtained generators: -y+1/2,x+1/2,z+1/2,-1;x+1/2,y+1/2,z,-1;-x,-y,-z,1

Complete list of symmetry operators and symmetry symbols

SymmOp	1: x,y,z,1	Symbol: 1
SymmOp	2: -x,-y,z,1	Symbol: 2 0,0,z
SymmOp	3: -y,x,z,-1	Symbol: 4+' 0,0,z
SymmOp	4: y,-x,z,-1	Symbol: 4-' 0,0,z
SymmOp	5: x+1/4,y,z,1	Symbol: t (1/4,0,0)
SymmOp	6: -x+1/4,-y,z,1	Symbol: 2 1/8,0,z
SymmOp	7: -y+1/4,x,z,-1	Symbol: 4+' 1/8,1/8,z
SymmOp	8: y+1/4,-x,z,-1	Symbol: 4-' 1/8,-1/8,z
SymmOp	9: x+1/2,y,z,1	Symbol: t (1/2,0,0)
SymmOp	10: -x+1/2,-y,z,1	Symbol: 2 1/4,0,z
SymmOp	11: -y+1/2,x,z,-1	Symbol: 4+' 1/4,1/4,z
SymmOp	12: y+1/2,-x,z,-1	Symbol: 4-' 1/4,-1/4,z
SymmOp	13: x+3/4,y,z,1	Symbol: t (3/4,0,0)
SymmOp	14: -x+3/4,-y,z,1	Symbol: 2 3/8,0,z
SymmOp	15: -y+3/4,x,z,-1	Symbol: 4+' 3/8,3/8,z
SymmOp	16: y+3/4,-x,z,-1	Symbol: 4-' 3/8,-3/8,z
SymmOp	17: x,y+3/4,z,1	Symbol: t (0,3/4,0)
SymmOp	18: -x,-y+3/4,z,1	Symbol: 2 0,3/8,z
SymmOp	19: -y,x+3/4,z,-1	Symbol: 4+' -3/8,3/8,z
SymmOp	20: y,-x+3/4,z,-1	Symbol: 4-' 3/8,3/8,z
SymmOp	21: x,y+1/4,z,1	Symbol: t (0,1/4,0)
SymmOp	22: -x,-y+1/4,z,1	Symbol: 2 0,1/8,z
SymmOp	23: -y,x+1/4,z,-1	Symbol: 4+' -1/8,1/8,z
SymmOp	24: y,-x+1/4,z,-1	Symbol: 4-' 1/8,1/8,z
SymmOp	25: x+1/4,y+3/4,z,1	Symbol: t (1/4,3/4,0)
SymmOp	26: -x+1/4,-y+3/4,z,1	Symbol: 2 1/8,3/8,z
SymmOp	27: -y+1/4,x+3/4,z,-1	Symbol: 4+' -1/4,1/2,z
SymmOp	28: y+1/4,-x+3/4,z,-1	Symbol: 4-' 1/2,1/4,z
SymmOp	29: x,y+1/2,z,1	Symbol: t (0,1/2,0)
SymmOp	30: -x,-y+1/2,z,1	Symbol: 2 0,1/4,z
SymmOp	31: -y,x+1/2,z,-1	Symbol: 4+' -1/4,1/4,z
SymmOp	32: y,-x+1/2,z,-1	Symbol: 4-' 1/4,1/4,z
SymmOp	33: x+3/4,y+3/4,z,1	Symbol: t (3/4,3/4,0)
SymmOp	34: -x+3/4,-y+3/4,z,1	Symbol: 2 3/8,3/8,z
SymmOp	35: -y+3/4,x+3/4,z,-1	Symbol: 4+' 0,3/4,z
SymmOp	36: y+3/4,-x+3/4,z,-1	Symbol: 4-' 3/4,0,z
SymmOp	37: x+1/4,y+1/4,z,1	Symbol: t (1/4,1/4,0)
SymmOp	38: -x+1/4,-y+1/4,z,1	Symbol: 2 1/8,1/8,z

SymmOp	39: -y+1/4,x+1/4,z,-1	Symbol: 4+' 0,1/4,z
SymmOp	40: y+1/4,-x+1/4,z,-1	Symbol: 4-' 1/4,0,z
SymmOp	41: x+3/4,y+1/4,z,1	Symbol: t (3/4,1/4,0)
SymmOp	42: -x+3/4,-y+1/4,z,1	Symbol: 2 3/8,1/8,z
SymmOp	43: -y+3/4,x+1/4,z,-1	Symbol: 4+' 1/4,1/2,z
SymmOp	44: y+3/4,-x+1/4,z,-1	Symbol: 4-' 1/2,-1/4,z
SymmOp	45: x+1/2,y+3/4,z,1	Symbol: t (1/2,3/4,0)
SymmOp	46: -x+1/2,-y+3/4,z,1	Symbol: 2 1/4,3/8,z
SymmOp	47: -y+1/2,x+3/4,z,-1	Symbol: 4+' -1/8,5/8,z
SymmOp	48: y+1/2,-x+3/4,z,-1	Symbol: 4-' 5/8,1/8,z
SymmOp	49: x+1/4,y+1/2,z,1	Symbol: t (1/4,1/2,0)
SymmOp	50: -x+1/4,-y+1/2,z,1	Symbol: 2 1/8,1/4,z
SymmOp	51: -y+1/4,x+1/2,z,-1	Symbol: 4+' -1/8,3/8,z
SymmOp	52: y+1/4,-x+1/2,z,-1	Symbol: 4-' 3/8,1/8,z
SymmOp	53: x+3/4,y+1/2,z,1	Symbol: t (3/4,1/2,0)
SymmOp	54: -x+3/4,-y+1/2,z,1	Symbol: 2 3/8,1/4,z
SymmOp	55: -y+3/4,x+1/2,z,-1	Symbol: 4+' 1/8,5/8,z
SymmOp	56: y+3/4,-x+1/2,z,-1	Symbol: 4-' 5/8,-1/8,z
SymmOp	57: x+1/2,y+1/4,z,1	Symbol: t (1/2,1/4,0)
SymmOp	58: -x+1/2,-y+1/4,z,1	Symbol: 2 1/4,1/8,z
SymmOp	59: -y+1/2,x+1/4,z,-1	Symbol: 4+' 1/8,3/8,z
SymmOp	60: y+1/2,-x+1/4,z,-1	Symbol: 4-' 3/8,-1/8,z
SymmOp	61: x+1/2,y+1/2,z,1	Symbol: t (1/2,1/2,0)
SymmOp	62: -x+1/2,-y+1/2,z,1	Symbol: 2 1/4,1/4,z
SymmOp	63: -y+1/2,x+1/2,z,-1	Symbol: 4+' 0,1/2,z
SymmOp	64: y+1/2,-x+1/2,z,-1	Symbol: 4-' 1/2,0,z
