

HELP ME THINK: A Simple Prompting Strategy for Non-experts to Create Customized Content with Models

Swaroop Mishra^{2*} Elnaz Nouri¹

¹Microsoft Research ²Arizona State University

Abstract

Controlling the text generated by language models and customizing the content has been a long-standing challenge. Existing prompting techniques proposed in pursuit of providing control are task-specific and lack generality; this provides overwhelming choices for non-expert users to find a suitable method for their task. The effort associated with those techniques, such as in writing examples, explanations, instructions, etc. further limits their adoption among non-expert users. In this paper, we propose a simple prompting strategy HELP ME THINK where we encourage large language models (such as GPT3 and ChatGPT) to help non-expert users by asking a set of relevant questions and leveraging user answers to execute the task. We demonstrate the efficacy of our technique HELP ME THINK on a variety of tasks. Specifically, we focus on tasks that are hard for average humans and require significant thinking to perform. We hope our work will encourage the development of unconventional ways to harness the power of large language models.

1 Introduction

Large language models (LLM) like GPT3, ChatGPT (Brown et al., 2020) and PaLM (Chowdhery et al., 2022) have excelled in many NLP tasks, however creating customized content in the form of long text generation using these models is a challenge (Figure 1), as (1) models have not been reliable in following a list of instructions, (2) correcting model’s output post generation by providing negative instructions (e.g. Don’t do this) in the form of dialogue has also not worked consistently. More importantly, significant effort is required for non-expert users to write instructions containing the important ingredients of a task; for example, in order to create instructions for models to write

the bio of a user, the user needs to think and provide various personal information. Travel & event plan generation are similar to such tasks where a non-expert user has to think and find out various information necessary to make a plan, such as ‘number of attendees’, ‘venue selection’, ‘budget’, ‘special arrangements’, etc.

We introduce HELP ME THINK: a simple prompting strategy for non-experts to write customized content with models. On a broader level, the goal of HELP ME THINK is similar to Make-A-Scene (Gafni et al., 2022); the application area, however, is vastly different as we focus on diverse applications that do not involve images and are purely based on text data. HELP ME THINK involves prompting models to ask relevant questions that reduce the thinking burden of users in identifying key information specific to that task. This application is in contrast to the dominant application of LLMs where various prompting techniques have been developed to enable LLMs in answering a question (Liu et al., 2021). We hypothesize that knowing the right question to ask is often more important than answering it, especially in the context of personalized content generation.

We experiment with six customized content generation tasks¹: (1) bio generation, (2) travel plan generation, (3) dialogue generation, (4) poem generation, (5) event summary generation, and (6) story generation. We prompt GPT3 and collect 68 questions corresponding to these tasks. We find that 100% of the generated questions are valid and relevant. We use crowd-sourcing to collect answers; we leverage these question-answer pairs to prompt GPT3 again and get task-specific outputs e.g. bio, event plan, story, etc. With the HELP ME THINK prompting, we construct a dataset of ~ 2k question-answer pairs with 180 task specific outputs spanning over the 6 tasks. We develop

*Work done while interning at Microsoft Research.

¹We also explore an additional set of 57 tasks in Appendix H.

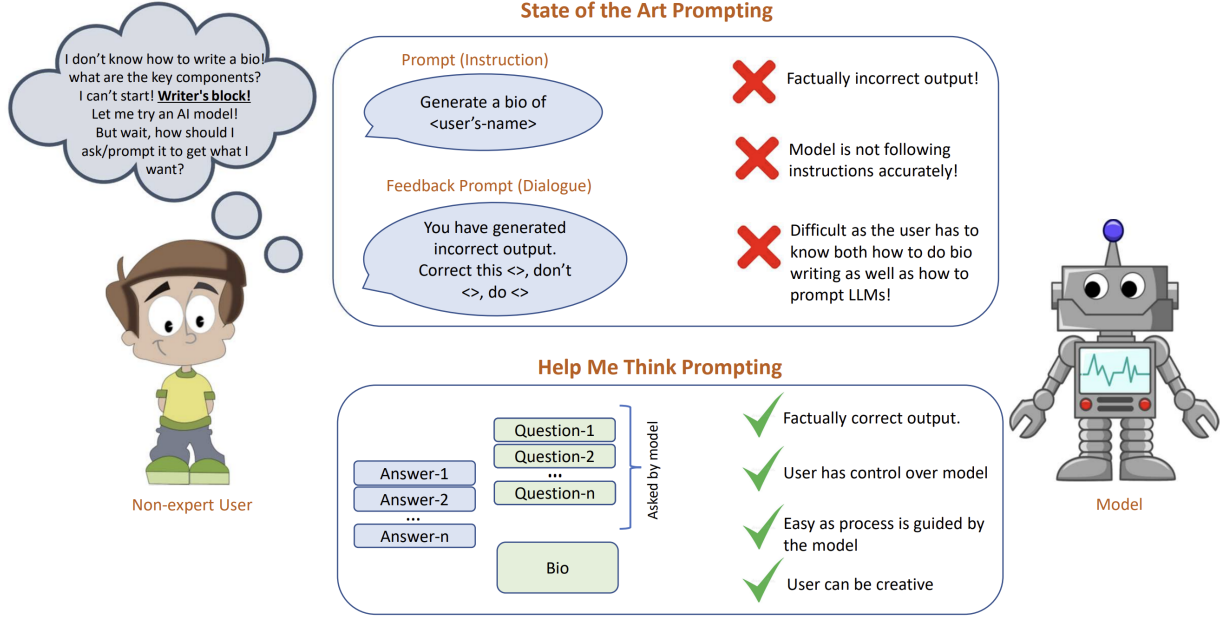

Figure 1: Illustration of HELP ME THINK prompting for a non-expert user on the bio generation task: detailed description of the example in Appendix B

a questionnaire-based human evaluation scheme for crowdworkers to evaluate the quality of model generations: (1) questions and (2) task-specific outputs.

Our results show that 100% of task-specific outputs generated by GPT3 are valid (e.g. valid bio) and $\sim 94\%$ of them do not contain any extra and irrelevant information. Moreover, we observe that, in $\sim 83\%$ of cases, GPT3 corrects typos/grammatical issues/invalid answers present in the crowdworkers' answers. GPT3 also adds appropriate context and generates coherent sentences for $\sim 99\%$ of cases. In 70% of cases, GPT3 performs accurate knowledge transfer² by transferring all information from input question-answer pairs to task-specific outputs. We hope the HELP ME THINK prompting and our focus on tasks hard for average humans will encourage the development of unconventional ways to harness the power of LLMs and bring more attention to the under-explored tasks.

2 HELP ME THINK

In this section, we introduce the HELP ME THINK prompting. We first present the algorithm behind HELP ME THINK. Next, we describe the prompts

²With a tolerance level of 1 question-answer pair for tasks with 4 questions (poem and dialogue tasks) and 2 question-answer pairs for tasks with more than 4 questions.

I am an expert *task-executer*. I will ask some questions to collect information and then I will use the information to *do the task*.
Question:

Figure 2: Prompt given to the model to generate question. *task-executer* and *do the task* are 'bio generator' and 'generate a bio for you' for the bio generation task. They vary across tasks.

used in HELP ME THINK³ and explain the role of non-expert users in this prompting process.

Prompt: Figure 2 illustrates the prompt given to the model that generates a question specific to the task of interest. Figure 3 shows that **model generates** a question and an answer, in response to the prompt. Figure 4 shows how we generate multiple questions in this process. Figure 5 shows where users fill in their answers. Figure 6 shows the prompt that is attached with the question-answer pairs which finally gives rise to the **model-generated task-specific output**.

3 Experiments

We have conducted experiments with HELP ME THINK on a diverse set of novel tasks. In this section, we describe these tasks and provide the

³Related work and detailed algorithm of HELP ME THINK are presented in Appendix A and B respectively.

details of the data collection and our evaluation setup.

3.1 Tasks

We experiment with six customized content generation tasks⁴: (1) bio generation, (2) travel plan generation, (3) dialogue generation, (4) poem generation, (5) event summary generation and (6) story generation.

3.2 Data Collection

We prompt GPT3 (Figure 4) to generate task-specific questions automatically. We set up a crowdsourcing task to get answers to the questions. We use a private group of crowdworkers that leverages a set of internal tools specific to the anonymous organization; they are instructed to write diverse outputs while collecting answers⁵. GPT3 is prompted with question-answer pairs and a task-specific prompt (Figure 6) to generate task-specific outputs.

3.3 Statistics

We collect a total of $\sim 2k$ QA pairs. Table 1 shows some key statistics in our collected data.

3.4 Evaluation

We use human evaluation since content generation tasks are open-ended and are hard to be captured by

⁴Examples of each of the tasks are in Appendix D

⁵More details of crowdsourcing is in Appendix G

I am an expert *\$task-executer\$*. I will ask some questions to collect information and then I will use the information to *\$do the task.\$*

Figure 6: A task-specific prompt is added after the model generated question-answer pairs. <model generates task-specific-output> in response to the prompt. *\$task-specific-output\$* for the bio generation task is ‘a long bio about John’. *\$task-specific-instruction\$* is optional, e.g. ‘Introduce names to represent characters.’ for the story generation task.

automated evaluation metrics. Each question associated with each task is evaluated by 3 annotators. The annotators evaluate various aspects of generated text by answering the associated questions.

3.4.1 Evaluation of Model Generated Questions

The annotators evaluate the following two aspects of the questions generated by models. Each question is evaluated by three annotators.

Validity *Is it a question? (and not a statement or any other text.)*

Relevance *Is it relevant to the underlying task?*
 E.g. bio, travel plan, story, etc.

category	# of instances
task	6
questions	68
question-answer pair	2040
task outputs	180

Table 1: Key statistics of our collected data.

category	bio	travel plan	dialogue	poem	event summary	story	avg.
Validity	100	100	100	100	100	100	100
Relevance	100	100	100	100	100	100	100

Table 2: Evaluation (majority voting of 3 annotators) of model generated questions for each task.

category	bio	travel plan	dialogue	poem	event summary	story	avg.
Validity	100	100	100	100	100	100	100
Knowledge Absorption	86.66	3.33	70	90	86.66	83.33	70
Relevance	100	93.33	76.67	96.67	96.67	100	93.89
Robustness	96.67	50	71.42	100	77.78	100	82.65
Coherence	100	100	96.15	100	100	100	99.36

Table 3: Model performance on different evaluation aspects for each task (majority voting of 3 annotators). For the ‘Knowledge Absorption’ category, a tolerance level of 1 question-answer pair for tasks with 4 questions (poem and dialogue tasks) and 2 question-answer pairs for tasks with more than 4 questions are taken.

3.4.2 Evaluation of Model Generated Task-specific Outputs:

Furthermore, each task-specific output (e.g. bio, story, etc.) generated by GPT3 and its corresponding input (generated by GPT3 and answered by the user) is evaluated by three annotators. Each annotator is asked to answer a question that covers a specific part of the evaluation as follows:

Validity: *Is the output a valid task-specific output? E.g. is it a valid bio? (for the bio-generation task).*

Knowledge Absorption: *Does the output incorporate all the facts and information from the input?*

Relevancy: *Does the output have unrelated information that is not present in the input?*

Robustness: *Has the output fixed any typos or grammatical errors or invalid answers present in the input, instead of copying the same?*

Coherence: *Can you find any example of output having additional related and contextual information written as a coherent sentence in addition to what was already present in the input?*

4 Results

We report the task-wise performance of GPT3 and analyze its variation across different aspects of evaluation.

Insights: *We observe that 100% of the questions generated by GPT3 are valid and relevant to the task (Table 2). Table 3 shows the performance of GPT3 in producing task-specific outputs. We observe that (1) 100% of the generations are valid*

task-specific outputs, (2) 93.89% of the generations do not contain irrelevant content, and (3) 99.36% times, GPT3 improves the coherence of text over the information presented to it in the form of input-output examples. (4) 82.65% times, GPT3 fixes typo/grammatical issues present in the user-written answers. However, we see that the knowledge absorption is low (70%), which we analyze further.

We also ask crowdworkers to write explanations; we analyze those to better understand the knowledge absorption in the task specific output generated by GPT3. We understand that for certain tasks like travel plan generations, some question-answer pairs are not important; they are not always necessary to be part of the plan⁶.

Extension to Other Tasks: We apply HELP ME THINK on 57 additional tasks (Appendix H) and find that HELP ME THINK is effective in generating valid and relevant questions. This shows the generalization of HELP ME THINK beyond the six tasks we have analyzed (Section 3.1).

Qualitative Comparison to Conversational Language Models:

HELP ME THINK can also be used for customized content creation with conversational models such as ChatGPT and Bard. Here the "role" parameter can be used as part of the prompts, specifically the prompts in Figure 2-6 can now be reframed from first person to second person since these models are designed to interact and respond to instructions. For example, the prompt in Figure 2 can now be "You are an expert \$task-executer\$.

⁶Additional evaluation and analysis are in Appendix E.

You will ask some questions to collect information and then You will use the information to *\$do the task.\$*." In our qualitative analysis without HELP ME THINK⁷, conversational language models does not show consistent question answering behavior and hallucination is still a major problem. HELP ME THINK fixes this issue along with the knowledge cut off issue of some conversational language models because it collects facts from the user during the interaction. The instruction following capability of conversational language models is better than conventional language models, but the number of instructions needed to correct/customize its generations will probably be higher in regular multi-turn conversations compared to Help-Me-Think. We view Help-Me-Think as a model agnostic approach that can be used and adopted with any of the state of the art models.

5 Conclusion

We introduce HELP ME THINK to help non-expert users prompt models for the relatively under-explored customized content generation tasks. We demonstrate the efficacy of HELP ME THINK on 6 different tasks. Our results show that (1) questions generated by GPT3 are valid and relevant, and (2) task-specific outputs generated by GPT3 are valid, relevant, robust, coherent, and have significant knowledge absorption. We hope this will bring more attention to the development of unconventional applications of LLMs in helping humans perform the tasks that are hard for non-expert users, in contrast to the conventional tasks like question-answering where models chase human baseline.

6 Limitation

HELP ME THINK is a model agnostic approach that allows users to inject facts to accomplish tasks with a variety of large language models through simple Q&A but additional experiments are needed to establish its effectiveness on new language models with different training paradigms and capabilities. The entire study is conducted only with tasks of English language. Expanding the scope of HELP ME THINK to other languages will increase the scope for non-expert users. A large scale evaluation setup is further needed to reach HELP ME THINK to non-expert users.

⁷See Appendix F for examples.

A Related Work

Prompting and Learning from Instructions:

The success of large language models (Brown et al., 2020; Chowdhery et al., 2022) has empowered the development of various prompting techniques (Liu et al., 2021). Instructions, proposed as an extension to prompts, describe tasks in natural language (Efrat and Levy, 2020; Weller et al., 2020) and guide models to generalize to unseen tasks (Mishra et al., 2022b; Wei et al., 2021; Ouyang et al., 2022; Sanh et al., 2021; Zhong et al., 2021; Wang et al., 2022c; Scaria et al., 2023) without requiring task-specific training. Prompts and Instructions are shown to be helpful in low-resource settings (Le Scao and Rush, 2021; Puri et al., 2022). Several variants of prompting such as chain of thought (Wei et al., 2022) or scratchpad (Nye et al., 2021), majority voting (Wang et al., 2022b), reframing (Mishra et al., 2022a), least-to-most prompting (Zhou et al., 2022), question decomposition (Khot et al., 2020; Patel et al., 2022) have been shown to be effective across various tasks. Efficacy of the Prompting/Learning from Instruction techniques has been shown across diverse applications (Wang et al., 2022d) such as dialog (Gupta et al., 2022), NER (Wang et al., 2022a), program synthesis (Kuznia et al., 2022), style transfer (Reif et al., 2021), tabular question answering (Luo et al., 2022), relation extraction (Chen et al., 2021), biomedical applications (Parmar et al., 2022). In contrast to prior works, we (1) focus on a diverse set of creative tasks as our application area, (2) build a non-expert user-centric technique (3) leverage language models for assisting users to think by asking questions (instead of just answering questions posed by humans), and in this process engage users that subsequently helps them learn the thinking process.

Creative Tasks using GPT3: GPT3 has been recently used for creative tasks such as writing a paper⁸, poem⁹, article¹⁰, and book¹¹. However, con-

⁸<https://www.scientificamerican.com/article/we-asked-gpt-3-to-write-an-academic-paper-about-itself-then-we-tried-to-get-it-published/>, <https://hal.archives-ouvertes.fr/hal-03701250/document>

trolling model generation in these creative tasks is a challenge. On a broader level, controlling content in text generated by pretrained language models has been a challenge in NLP (Perez, 2022). The HELP ME THINK framework provides a model-guided approach by generating and asking questions to assist users in thinking through various steps and at the same time controlling the content of the text generated by the model. We further prove the efficacy of the HELP ME THINK approach by applying it to a set of 63 diverse tasks. These tasks are novel and creative and can potentially form a benchmark dataset for future research.

Interactive Learning Interactive question answering has been utilized in several recent works (Zhong et al., 2022; Zhao et al., 2022; Yao et al., 2020) around semantic parsing. In these cases, the target output is code and the task is being decomposed into smaller sub-tasks. A similar approach has also been applied to the robotics domain e.g. SayCan (Ahn et al., 2022). HELP ME THINK is different in two ways (1) the schema in case of semantic parsing tasks and the set of actions in robotics tasks are fixed, whereas in HELP ME THINK, schema is dynamic and is derived from a high level description of the task (2) in the approaches for semantic parsing and robotics tasks, there is a concern if the generated output can be executed on downstream tasks (e.g. in guiding a robot), however that concern is relaxed in HELP ME THINK as the output itself is in natural language.

B HELP ME THINK algorithm and Description

Algorithm: Algorithm 1 illustrates the detailed algorithm behind HELP ME THINK. It has 3 stages: Stage 1 (Generate Questions), Stage 2 (Collect Answers) and Stage 3 (Generate Task-specific Output). We describe each stage in detail below.

Description In figure 1, a non-expert user is asked to write a biography, but this is a hard task for the user since it demands thinking about key and necessary components for a biography which the user might not know about or the user might just simply be dealing with writer’s block when faced with creative writing tasks. The user decides to get help from an AI model. The user wants to try to prompt an AI model (using state-of-the-art instruction prompting paradigms), but the model produces factually incorrect output for him. Next,

the user tries to interact with the model and provide feedback to correct the model prediction (dialogue paradigm), but this approach is also a failure because it is a challenge for models to accurately follow feedback instructions. For the majority of non-expert users, figuring out an effective prompting strategy is a major challenge. Finally, HELP ME THINK helps the user generate the factually correct biography via the model by guiding the user in the process by asking questions, this alleviates the cognitive demand on the user significantly. By removing the hurdles out of the way of the user in writing his biography, HELP ME THINK also allows the user to take a step further and focus on creativity and quality.

Algorithm 1 HELP ME THINK algorithm

- 1: Generate question-generation prompt by replacing task-specific variables in the prompt (figure 2) ▷ Start of Stage 1 (Generate Questions)
 - 2: Setup stop condition (e.g. ?, 'Answer:', new-line) and ask GPT3 to complete with 'Question: ' prompt
 - 3: Repeat Step 2 until the model starts generating repetitive, redundant, or irrelevant content.
 - 4: If default settings are not producing the expected output, then try these (1) control temperature, (2) control max output size, (3) add additional task-specific instruction or (4) add an example question. ▷ End of Stage 1 (Generate Questions)
 - 5: Ask user to answer each of the questions and pose customization requirements (Figure 5) ▷ Stage 2 (Collect Answers)
 - 6: Generate task-specific output generation prompt by replacing task-specific variables in the prompt (figure 6) ▷ Start of Stage 3 (Generate Task-specific Output)
 - 7: If question-answer pairs are dependent on each other, collect all of them to feed them all at once to model, else feed them batch by batch
 - 8: Setup appropriate stop condition and ask GPT3 to complete output after the prompt
 - 9: Concatenate task-specific output if step 6 was done in batches
 - 10: If default settings are not producing valid output, then try these (1) control temperature, (2) control max output size or (3) add additional task-specific instruction. ▷ End of Stage 3 (Generate Task-specific Output)
-

Role of Non-expert User: Figure 1 illustrates the role of a non-context user in performing bio generation tasks. It requires a lot of thinking for the non-expert user to write a bio as it demands the identification of key ingredients corresponding to the bio generation task. HELP ME THINK in contrast to other prompting techniques helps the user perform the task via the model with minimal effort, as they just need to answer the questions generated by the model (Figure 5).

C Detailed Prompts and Hyperparameters

In this section, we describe the initial prompts (Figure 2) we use across tasks. Figures 7, 8, 9, 10, 11, 12 show the prompts for bio, travel plan, dialogue, poem, event summary and story generation tasks respectively.

Figure 4 illustrates all questions generated by GPT3 for various tasks in response to our prompting (Figure 3,4).

Figure 13, 14, 15, 16, 17, 18 show the prompt used to generate task-specific output from GPT3 (as in figure 6).

We use the following hyper-parameters while querying GPT3 for various tasks: `engine=text-davinci-002`, `temperature=0.7`, `max_tokens=512`, `top_p=1`, `frequency_penalty=0`, `presence_penalty=0`.

I am an expert in generating Bio of people. I ask questions to gather information. Then I use these information to generate bio.
Question:

Figure 7: Prompt given to model to generate question about the bio generation task.

I am a famous travel planner. I will ask clarifying question to collect information and then I will write an awesome travel plan and schedule for you.
Question:

Figure 8: Prompt given to model to generate question about the travel plan generation task.

I am a famous dialogue writer. I will ask simple questions to collect information and then I will write a dialogue series specially for you.
Question:

Figure 9: Prompt given to model to generate question about the dialogue generation task.

I am a famous event planner. I will ask clarifying question to collect information and then I will write an awesome event plan for you.
Question:

Figure 11: Prompt given to model to generate question about the event summary generation task.

I am an expert script writer. I will ask some simple questions to collect information and then I will write a story of your choice.
Question:

Figure 12: Prompt given to model to generate question about the story generation task.

I am a famous poet. I will ask clarifying question to collect information and then I will write a poem.
Question:

Figure 10: Prompt given to model to generate question about the poem generation task.

D User Inputs and GPT3 Outputs

For each of the tasks, we illustrate a sample user input and GPT3 output.

Table 5, 6, 7, 8, 9, 10 shows sampler user input and task-specific output generated by GPT3 for bio, travel plan, dialogue, poem, event summary and story generation task respectively.

E Additional Analysis

We also conduct a stricter evaluation where the model gets a score of 1 for sample only if information from all the question-answer pairs are incorporated in the generated task-specific output. Table 12 shows that this happens only in 41.11% of the generated task-specific outputs.

Additionally, we conduct a separate analysis to understand how frequently GPT3 is required to fix typos/grammatical issues (improve robustness) and add appropriate context by expanding user input

I am an expert in generating Bio of people. I ask questions to gather information. Then I use these information to generate bio.
Question: <model generated question>
Answer: user written answer
Question: <model generated question>
Answer: <user written answer>
...
Write a long bio about John using the questions and his answers above.
<model generates task-specific-output>

Figure 13: Prompt given to model to generate task-specific output about the bio generation task.

I am a famous travel planner. I will ask clarifying question to collect information and then I will write an awesome travel plan and schedule for you.
Question: <model generated question>
Answer: user written answer
Question: <model generated question>
Answer: <user written answer>
...
Based on the information provided, I would recommend the following travel schedule and budget for your trip:
<model generates task-specific-output>

Figure 14: Prompt given to model to generate task-specific output about the travel plan generation task.

I am a famous dialogue writer. I will ask simple questions to collect information and then I will write a dialogue series specially for you.
Question: <model generated question>
Answer: user written answer
Question: <model generated question>
Answer: <user written answer>
...
Write a nice dialogue series using all the questions and answers above.
Person 1:
<model generates task-specific-output>

Figure 15: Prompt given to model to generate task-specific output about the dialogue generation task.

I am a famous poet. I will ask clarifying question to collect information and then I will write a poem.
Question: <model generated question>
Answer: user written answer
Question: <model generated question>
Answer: <user written answer>
...
Write a poem using the question and answers above.
<model generates task-specific-output>

Figure 16: Prompt given to model to generate task-specific output about the poem generation task.

I am a famous event planner. I will ask clarifying question to collect information and then I will write an awesome event plan for you.
Question: <model generated question>
Answer: user written answer
Question: <model generated question>
Answer: <user written answer>
...
Write a detailed event plan based on the questions and answers above.
<model generates task-specific-output>

task	questions	answers	task-specific outputs
bio	What are your hobbies?	Cooking	John is a avid hobbyist who loves to cook and ride bikes. His favorite food is pizza, and his favorite color is black. John is a very friendly person who loves to meet new people. He is a very outgoing person and loves to have fun. John is a very hard worker and is always looking to improve himself. He is a very dedicated person and is always willing to help others.
	What is your favorite thing to do?	Riding bikes	
	What is your favorite food?	Pizza	
	What is your favorite color?	Black	
	What is your education?	Bachelor of Commerce	
	What is your work history?	Junior Executive	John is a highly accomplished individual who has made a significant impact in his field. He holds a Bachelor of Commerce from a prestigious university and has worked his way up through the ranks to become a Junior Executive. John has been recognised for his outstanding work with numerous awards, including Employee of the Month. John comes from a strong family background; his family belongs to South Indian origin and he is extremely proud of his heritage. John is a highly motivated individual who always strives to achieve the best possible results. He is a true asset to any organisation and has a bright future ahead of him.
	What are your awards?	Employee of the month	
	What is your family background?	Family belongs to South Indian origin	
	What is your favorite thing to do on a weekend?	Day out with friends	
	What is your favorite thing to wear?	Dress	
	What is your favorite thing to do for fun?	Mimicry	John is a fun-loving guy who loves spending time with his friends. He enjoys doing things like going out for a day, mimicry, and just having a good time. He loves to dress up and look his best, and he enjoys wearing dresses and other fun clothes. When it comes to fun, John is definitely the life of the party!
	What is your favorite thing to do with friends?	Outing	
	What is your favorite thing to do alone?	Dance	
	What is your favorite place to go?	Rome, Italy	
	What is your favorite thing to do on a date?	Go tubing	
	What is your favorite thing to do when you're feeling down?	Rest up	John is a fun-loving guy who loves to dance. When he's feeling down, he likes to rest up and when he's feeling up, he loves to go tubing. Rome is his favorite place to go and he loves to explore new places.
	What is your favorite book?	To Kill a Mockingbird	
	What is your favorite music?	As it was	
	What is your favorite TV show?	The Boys	
	What is your favorite vacation spot?	Bali, Indonesia	
	What is your favorite animal?	Dog	John is a voracious reader, and his favorite book is To Kill a Mockingbird. He loves all genres of music, but his favorite is As it Was. He is a huge fan of The Boys, and his favorite vacation spot is Bali, Indonesia.
	What is your favorite sport?	Cricket	
	What is your favorite team?	Real Madrid, Football	
	What is your favorite movie?	Bhool Bhulaiyaa	
	What is your favorite thing to do when you're happy?	Exercise	
	What is your favorite thing to do when you're bored?	Work on Puzzle	John is a huge animal lover, and his favorite animal is a dog. He's also a big fan of cricket, and his favorite team is Real Madrid. He loves watching Bhool Bhulaiyaa, and it's one of his favorite movies.
	What is your favorite thing to do when you're stressed?	Do some breathing exercise	
	What is your favorite thing to do when you're tired?	Yoga	
	What do you do?	Write	
	What are your interests?	Trekking	
	What are your skills?	Time management	John is an avid exerciser who loves to stay active when he's feeling happy. When bored, he enjoys working on puzzles to keep his mind sharp. And when feeling stressed, he finds that some breathing exercises help him to relax. Yoga is one of his favorite things to do when tired, as it helps him to stretch and wind down after a long day.
	What are your experiences?	Being promoted	
			John is a writer who is interested in trekking and has great time management skills. He has been promoted in the past and is looking to continue his writing career.

Table 5: A sample from the bio generation task containing model generated questions, user written answers and model generated task-specific output.

task	questions	answers	task-specific outputs
travel plan	How many people are in your party?	6	Day 1: Arrive in Mumbai and check into your 7-star hotel. Spend the day relaxing and exploring the hotel amenities.
	What are the ages of the members of your party?	72, 70, 44, 41, 16, 10, 10	Day 2: Head out for a day of sightseeing in Mumbai. Visit the Gateway of India, the Taj Mahal Palace Hotel, and the Elephanta Caves.
	What is the budget for your trip?	60 lacs	Day 3: Take a day trip to Gujarat to explore the state's famous Gujarati cuisine.
	What are your preferred travel dates?	October 1 to December 31	Day 4: Fly to Delhi and check into your 7-star hotel. Spend the day relaxing and exploring the hotel amenities.
	What is your preferred mode of transportation?	Aeroplane	Day 5: Head out for a day of sightseeing in Delhi. Visit the Red Fort, the Gandhi Memorial, and the Jama Masjid.
	What are your preferred accommodation options?	7-star hotel	Day 6: Take a day trip to Agra to see the Taj Mahal.
	What are your preferred activities while on vacation?	Sightseeing	Day 7: Fly back to Mumbai and spend the day relaxing at your hotel.
	What are your preferred food options while on vacation?	Gujarati cuisine	Day 8: Check out of your hotel and head home.

Table 6: A sample from the travel plan generation task containing model generated questions, user written answers and model generated task-specific output.

task	questions	answers	task-specific outputs
dialogue	What is the most important thing in your life?	Education	Person 1: What is the most important thing in your life?
	What are your hopes and dreams for the future?	Enough Wealth	Person 2: Education is the most important thing in my life. It's what helps me get ahead and achieve my dreams.
	What makes you happy?	Movie	Person 1: What are your hopes and dreams for the future?
	What is your favorite thing about life?	Liveliness	Person 2: I hope to achieve great things in my future. I want to be wealthy and successful.
			Person 1: What makes you happy?
			Person 2: I find happiness in many things. I love movies, spending time with my friends and family, and just enjoying life.
			Person 1: What is your favorite thing about life?
			Person 2: My favorite thing about life is its liveliness. There is always something new and exciting happening. It's never dull or boring.

Table 7: A sample from the dialogue generation task containing model generated questions, user written answers and model generated task-specific output.

task	questions	answers	task-specific outputs
poem	What is the occasion?	Golden Jubilee celebration	Golden Jubilee celebration A time to look back On all the happy moments And all the love we've shared
	What is the mood?	Romantic	We've been through good times and bad
	What is the theme?	Retro	But our love has always stayed strong
	What is the tone?	Friendly	As we look back on all we've shared We know that our love will last forever

Table 8: A sample from the poem generation task containing model generated questions, user written answers and model generated task-specific output.

task	questions	answers	task-specific outputs
event summary	What type of event are you looking to plan?	musical	Diwali Musical Marketing Event
	What is the purpose of the event?	to do marketing of musical institute youngsters	Purpose:To market the musical institute to youngsters in the lead up to Diwali.
	Who is the target audience for the event?		Target audience:Youngsters aged between 15-25.
	When is the event taking place?	on Diwali	
	Where is the event taking place?	At musical institute	Date and time:The event will take place on Diwali, from 2pm to 7pm.
	What is the budget for the event?	\$800	
	What is the expected headcount for the event?	400	Location:The event will be held at the musical institute.##Budget:The budget for the event is \$800.
	What is the theme of the event?	casual dressing and musical decoration	
	What activities do you want to include in the event?	Musical competition	Headcount:The expected headcount for the event is 400.
	Do you have any specific requests for the event?	Loud speakers	Theme:The theme of the event is casual dressing and musical decoration.
	What is the timeline for the event?	5 Hrs	Activities:The activities planned for the event include a musical competition.
	What is the expected outcome of the event?	Marketing	Specific requests:Loud speakers are required for the event.
			Timeline:The event will last for 5 hours. Outcome:The expected outcome of the event is increased marketing for the musical institute.

Table 9: A sample from the event details generation task containing model generated questions, user written answers and model generated task-specific output.

task	questions	answers	task-specific outputs
story	What type of story would you like me to write?	on global warming	As the sun began to set, the politician knew he had to act fast. He was in India, a country that was already feeling the effects of global warming. The politician knew that if he didn't act soon, the effects of global warming would only get worse.##The politician knew he had to make a speech that would alert the people of the world to the dangers of global warming. He also knew he had to make a plan to help stop global warming.##The politician got up in front of the crowd and began to speak. He talked about how global warming was affecting India and how it would affect the rest of the world if something wasn't done to stop it. He talked about how the world needed to come together to stop global warming.##The politician's speech was a success. The people of the world were alerted to the dangers of global warming. The politician had given them a plan to help stop global warming.
	What is the main plot of your story?	future warming	
	What is the ending of your story?	alerting	
	What are the main characters in your story?	politician	
	Where does the story take place?	india	
	Why does the story end the way it does?	to convey the message	
	What is the main conflict in your story?	Man vs. Nature	
	What message do you want your story to send?	awareness about future warming	

Table 10: A sample from the story generation task containing model generated questions, user written answers and model generated task-specific output.

I am an expert script writer. I will ask some simple questions to collect information and then I will write a story of your choice.
 Question: <model generated question>
 Answer: user written answer>
 Question: <model generated question>
 Answer: <user written answer>
 ...
 Write a long story using the questions and answers above.
 Introduce names to represent characters.
 <model generates task-specific-output>

Figure 18: Prompt given to model to generate task-specific output about the story generation task.

(improve coherence). The results (Table 11) signify that the number of times GPT3 has to improve robustness is relatively lower as users do not do typos/grammatical incorrectness frequently, however the coherence improvement is more often necessary as users often write short answers which is required to be expanded in the form of a coherent text.

Improving Knowledge Absorption via Decomposition: We observe that *reducing the number of question-answer pairs fed to a model increases knowledge absorption*. For example, in the case of travel plan generation (where the knowledge absorption rate is the least), feeding 8 questions instead of the default 12 questions, increases knowledge absorption significantly. However, there is a trade-off, as decreasing the number of questions decreases the details captured.

F HELP ME THINK Prompting for Conversational Language Models

Prompting a conversational language model such as ChatGPT or Bard with HELP ME THINK is done similar to how we prompt GPT3. Algorithm 1 is used but because of the conversational nature of these models we reframe all first person sentences to second person language. See Figure 19, 20 and 21 for how we use HELP ME THINK to generate a customized poem with ChatGPT. We would like to note that on asking "How do I write a poem?" to ChatGPT (Figure 23) or Google search (Figure 22), we receive a set of instructions that are harder to follow for non-experts.

User: You are a famous poet. You will ask clarifying question to collect information and then you will write a poem.

ChatGPT: Certainly! I would be delighted to assist you in creating a poem. Please provide me with the necessary information or any specific topic you would like the poem to be based on.

User: ask me question please.

ChatGPT: Of course! To begin crafting your poem, could you please share with me a subject or theme you would like the poem to revolve around? It could be something personal to you, a particular emotion, or even a specific setting or event.

User: The poem is about loving every moment of life to the fullest.

ChatGPT: Ah, embracing life's every moment with joy! Before I embark on crafting the poem, Could you kindly elucidate further? What aspects of life do you cherish most? Are there particular experiences or feelings That capture the essence of this philosophy? Share with me the colors and flavors of life, So I may weave them into words of delight. With your insights, let us create a tapestry That celebrates the beauty of existence, And inspires others to embrace life's vibrancy.

User: ask me question please.

ChatGPT: Certainly! To paint a vivid picture in the poem, could you describe some specific moments or activities that embody the idea of embracing life to the fullest? Is it watching a breathtaking sunrise, dancing in the rain, savoring a delicious meal, or perhaps traveling to new and exciting places? Understanding the particular experiences or actions that bring you joy and fulfillment will help me craft a poem that truly captures the essence of embracing life's every moment.

User: My favorite moment is when we won an award for our project this winter.

ChatGPT: Ah, a triumphant moment of achievement! Could you kindly share a few more details? What was the project that brought this award? What emotions and sensations did you experience In that glorious winter's embrace? Tell me about the teamwork, the dedication, And the elation that filled the air, As you basked in the glow of success. With this understanding, I shall fashion A poetic tribute to that cherished moment, A celebration of seizing opportunities and growth.

Figure 19: Prompt given to conversational language model (e.g. ChatGPT) to generate questions for guiding the poem generation task and the generated response (Part 1).

category	bio	travel plan	dialogue	poem	event summary	story	avg.
Robustness	96.67	3.33	50	6.67	46.67	23.34	37.78
Coherence	100	100	83.34	96.67	33.34	100	85.56

Table 11: Model performance without incorporating the ‘not applicable’ option in evaluation. Each sample is evaluated using the majority voting of 3 annotators. The results signify that the number of times GPT3 has to improve robustness is relatively lower as users do not do typos/grammatical incorrectness frequently, however, the coherence improvement is more often necessary as users often write short answers which are required to be expanded in the form of a coherent text.

category	bio	travel plan	dialogue	poem	event summary	story	avg.
Knowledge Absorption	43.33	0	50	73.33	56.67	23.34	41.11

Table 12: Model performance with strict evaluation (model gets a score of 1 for sample only if all question-answer pairs are incorporated in the generated task-specific output). Each sample is evaluated using the majority voting of 3 annotators.

<p>User: ask me question please.</p> <p>ChatGPT: Certainly! To further shape the poem, could you describe the significance of winning the award for your project? How did it make you feel and what impact did it have on your life or the lives of those involved? Additionally, if there were any specific challenges or obstacles you overcame during the project, please share those details as well. Understanding the depth of your experience and the transformative power of this achievement will help me craft a poem that captures the essence of embracing life's moments of success and growth.</p> <p>User: It was special because we had so many difficulties and then we figured it out.</p> <p>ChatGPT: Ah, the sweet taste of victory after overcoming challenges!</p> <p>The resilience and determination you displayed Are vital elements in shaping the poem's narrative. Could you kindly share a glimpse of those difficulties, The hurdles you faced and the obstacles you conquered? What were the emotions that coursed through your veins When you finally found the solution, the breakthrough? And how did this experience transform you, Both individually and as a team, united? With this understanding, I shall commence my art, Crafting a poem that celebrates perseverance, And the fulfillment of conquering life's adversities.</p> <p>User: Generate poem please.</p> <p>ChatGPT: In the realm of trials, we faced our plight, With hearts aflame, igniting the night. Through winding paths and shadows deep, We trudged with hope, our dreams to keep.</p> <p>Obstacles loomed, like mountains high, Threatening to dim our spirits' sky. But we stood strong, hand in hand, A resolute team, a courageous band.</p>	<p>With every challenge that dared defy, We summoned strength, reaching for the sky. Through sleepless nights and weary days, We persevered, seeking brighter ways.</p> <p>And in the depths of that winter's embrace, We found the answer, that saving grace. A flicker of hope, a gleam in our eyes, As the pieces aligned, a brilliant prize.</p> <p>The moment arrived, as if in a dream, The applause echoed, a victorious stream. For we had conquered the storms that came, Emerging stronger, never the same.</p> <p>The award we won, a symbol of might, A testament to our unwavering fight. But the true victory lies in our souls, The growth, the bonds that forever hold.</p> <p>For in the crucible of challenge and strain, We discovered treasures, wisdom to gain. Our spirits forged, our hearts ablaze, Embracing life's moments, in myriad ways.</p> <p>So let us remember, through thick and through thin, That life's trials, though they may begin, Are stepping stones to a greater whole, Where triumph resides in every soul.</p> <p>And as we journey through life's grand scheme, Let us cherish each moment, like a cherished dream. For in the face of difficulties, we find our strength, And embrace the fullness of life, at every length.</p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Figure 20: Prompt given to conversational language model (e.g. ChatGPT) to generate questions for guiding the poem generation task and the generated response (Part 2).

Figure 21: Prompt given to conversational language model (e.g. ChatGPT) to generate questions for guiding the poem generation task and the generated response (Part 3).

<p>User Query on Google Search: how do i write a poem</p> <p>Search Result: <Featured Snippet> How to write a poem</p> <p>1 Decide what you want to write about. Unless you've been assigned to write a poem about a specific topic, the first step in writing a poem is determining a topic to write about. ... 2 Determine the best format for your topic. ... 3 Explore words, rhymes, and rhythm. ... 4 Write the poem. ... 5 Edit what you've written.</p>

Figure 22: Google Search results when a non-expert user searches for "how to write a poem" which is probably not as helpful as HELP ME THINK. Variations of the query yield similar results.

<p>User: how do i write a poem</p> <p>ChatGPT: Writing a poem is a creative and personal process that allows you to express your thoughts, emotions, and observations through the beauty of language. While there are no strict rules to follow, here are some general steps and tips to help you get started:</p> <ol style="list-style-type: none"> 1. Find inspiration: Look for inspiration in your surroundings, experiences, nature, emotions, or any topic that resonates with you. It could be a particular moment, a strong feeling, or a thought-provoking idea. 2. Choose a poetic form or structure: Decide if you want to write in a specific form, such as a sonnet or haiku, or if you prefer a free verse style where there are no set rules for meter or rhyme. The choice is entirely up to you. 3. Brainstorm and jot down ideas: Take a moment to brainstorm and write down any words, phrases, or images that come to mind related to your chosen topic. Let your thoughts flow freely without judgment. 4. Create a structure: Decide on the structure of your poem, including the number of stanzas, lines per stanza, and any rhyme scheme or pattern you want to follow. This will provide a framework for your poem. 5. Express your emotions and thoughts: Start writing! Use your words to convey your emotions, thoughts, and observations. Focus on vivid imagery, sensory details, and evocative language to bring your poem to life. 6. Experiment with poetic devices: Incorporate literary devices such as metaphors, similes, personification, alliteration, or repetition to add depth and musicality to your poem. These devices can enhance the impact of your words. 7. Revise and refine: Once you have a draft of your poem, take some time to review and revise it. Pay attention to the flow, rhythm, and overall coherence of your words. Remove any unnecessary elements and polish your language. 8. Read it aloud: Poetry is meant to be spoken and heard. Read your poem aloud to yourself or to someone else. This will help you identify areas that may need improvement and ensure the words resonate when spoken. 9. Embrace feedback: Consider sharing your poem with trusted friends, fellow writers, or online writing communities. Embrace constructive feedback to further refine your work and gain new perspectives. 10. Keep practicing: Writing poetry is a journey of continuous learning and growth. Keep exploring different styles, themes, and techniques. The more you write, the more you'll develop your own unique voice and style. <p>Remember, there are no right or wrong answers in poetry. It's a beautiful form of self-expression, so embrace your creativity, experiment, and have fun with the process.</p>

Figure 23: Response from ChatGPT on how to write a poem without using HELP ME THINK.

G Crowdsourcing Details

We used crowdsourcing for two purposes: collection of responses to the model questions and for evaluation of the generations by the model.

In the first round of crowdsourcing, we collected responses to the model’s questions. We used a crowdsourcing platform <anonymized>. We recruited English speaking annotators from India. We used an intermediate third party vendor which assures quality of the tasks through management of communication and training of the annotators. We provided 2 rounds of pilot HITs (human intelligence task) to vendor’s annotators and reviewed their responses and made clarifications to the instructions based on the feedback. We assessed the qualification of the crowd workers based on the responses to the pilot hits. In addition to the hourly rate of 12 dollars per hour for annotation work, we also covered vendor’s management and training fees to assure quality of the responses that we receive. A screenshot of the interface for the human intelligence task (HIT) is provided in Figure 24. The questions shown in this Figure are the questions generated by model and previously shown in Table 5. Annotators had the choice of performing the requested tasks only after approving the task’s privacy and consent form. In addition, we provided explicit instructions in the hits that disallowed sharing of any personal and identifiable information when providing responses.

In the second round of crowdsourcing, we asked annotators to review and evaluate the quality of generations by the model. We used the same crowdsourcing platform and vendor for this experiment as well. We used pilot hits to assess the quality of annotations and provided additional explanations and feedback to the annotators. Each generation for each task was evaluated by 3 independent judges.

A screenshot of the interface for the human intelligence task (HIT) is provided in Figure 25.

Annotators again had the choice of performing the requested tasks only after approving to the experiment’s privacy and consent terms. In addition, we provided explicit instructions in the hits that disallowed sharing of any personal and identifiable information.

H Additional Tasks

We also show efficacy of HELP ME THINK on 57 additional tasks. Figure 26 shows the summary of the 57 additional tasks. Table 13,

14,15,16,17,18,19,20,21,22,23,24,25,26,27,28,29, 30,31,32,33,34,35,36,37, 38, 39, 40,41,42,43,44,45,46,47,48,49,50,51,52,53,54, 55,56,57,58,59,60,61,62,63,64, 65, 66, 67,68, 69 illustrate the questions generated by GPT3 for each of the 57 tasks respectively.

element	taskname/input prompt/model predictions
task	cricket team formation
prompt	I am a famous cricket expert. I will ask clarifying question to collect information and then I will build an awesome franchise cricket team for you.
questions	What is your budget for this team? What is your preferred region for this team? What is the level of competition you are looking to compete in? What is your preferred style of play? What kind of players are you looking for? Do you have any specific players in mind? Are you looking to build a team from scratch or do you want to buy an existing team? Do you want to be involved in the day-to-day operations of the team or do you want to delegate that to someone else? What is your timescale for this project? What are your long-term aspirations for this team? Do you have any other requirements that you think are relevant?

Table 13: Generated questions for additional task-1 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	making a cricket bat
prompt	I am a famous cricket bat manufacturer. I will ask clarifying question to collect information and then I will make plan of an awesome cricket bat for you.
questions	What is your budget for the cricket bat? How many cricket bats do you need? What is the preferred size of the cricket bat? What is the preferred weight of the cricket bat? What is the preferred material for the cricket bat? What is the preferred finish for the cricket bat? What is the preferred handle style for the cricket bat? What is the preferred grip for the cricket bat? What is the preferred bat profile for the cricket bat? What is the preferred sweet spot location for the cricket bat? What is the preferred spine profile for the cricket bat? What is the preferred edge profile for the cricket bat? What is the preferred toe profile for the cricket bat? What is the preferred willow grade for the cricket bat? What is the preferred knocking-in method for the cricket bat? What is the preferred bat cover for the cricket bat? What is the preferred bat label for the cricket bat?

Table 14: Generated questions for additional task-2 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	cricket pitch curator
prompt	I am a famous cricket pitch curator. I will ask clarifying question to collect information and then I will make plan of an awesome cricket pitch for you.
questions	What type of cricket are you playing? Test, one-day, or Twenty20? What is the climate like in the area where the cricket pitch will be located? What is the soil type in the area where the cricket pitch will be located? What is the size of the cricket pitch that you need? What type of grass do you want on the cricket pitch? What is your budget for the cricket pitch? What is the timeline for the construction of the cricket pitch? What type of drainage do you want for the cricket pitch? What type of irrigation system do you want for the cricket pitch? Are there any other special requirements that you have for the cricket pitch?

Table 15: Generated questions for additional task-3 along with the prompt fed to GPT3.

Commonsense Question Answering

Instructions

Please answer the questions below. We do **Not** want you to give your personal information in response but rather provide suitable hypothetical response. For each question, provide 5 different responses that are suitable responses to the question. For example, if you get the question "What do you do?" You do not need to answer it with your own actual answer job. Instead think of other ways to provide 5 jobs that make up a suitable response, for example if people normally do them or if you really wanted to do them or you know a lot about them, etc.

Note that, there is one hitapp where there will be questions like "What is the occasion?". Here, hypothetically think of an occasion. Similarly, you have to also hypothetically think of other situations for some other questions.

Question	5 Different Answers
1. What are your hobbies?	1st answer:
	Dance
	2nd answer:
	Drawing
	3rd answer:
	Playing Video Games
	4th answer:
	Watching Tv Shows like Bigg boss
	5th answer:
Baking Cake	
2. What is your favorite thing to do?	1st answer:
	Listening Atif Aslam songs
	2nd answer:
	Try new beauty Products
	3rd answer:
	Drink cold coffee with an ice cream
	4th answer:
	Playing chess
	5th answer:
writing different thoughts on nature.	
3. What is your favorite food?	1st answer:
	Chinese Bhel
	2nd answer:
	Dosa
	3rd answer:
	Samosa
	4th answer:
	Pizza
	5th answer:
Burger	
4. What is your favorite color?	1st answer:
	Red
	2nd answer:
	Blue
	3rd answer:
	Black
	4th answer:
	Pink
	5th answer:
Green	

Submit

Figure 24: Hitapp Full Instructions: Please answer the questions below. We do NOT want you to give your personal information in your response but rather provide suitable hypothetical responses. For each question, provide 5 different responses that are suitable responses to the question. For example, if you get the question "What do you do?" You do not need to answer it with your own actual answer job. Instead think of other ways to provide 5 jobs that make up a suitable response, for example if people normally do them or if you really wanted to do them or you know a lot about them, etc. Similarly, you have to also hypothetically think of other situations for some other questions.

Evaluation

Instructions

In the task we ask you to evaluate the quality of some generated text with a specific **Goal** (1st column). You have to decide about the quality of the **Output (Generated text)**(3rd column) considering the information provided as the Input (2nd column) by answering the questions.

Goal	Input (Context Information provided as input in the form of Question-Answer pairs)	Output (Generated text based on the input)	Evaluation
event plan Generation	Question: What type of event are you looking to plan?#Answer: get-together#Question: What is the purpose of the event?#Answer: Have some fun time#Question: Who is the target audience for the event?#Answer: Family members and close relatives#Question: When is the event taking place?#Answer: October 15, 2022#Question: Where is the event taking place?#Answer: At my home#Question: What is the budget for the event?#Answer: 15 lacs#Question: What is the expected headcount for the event?#Answer: 50#Question: What is the theme of the event?#Answer: Casuals#Question: What activities do you want to include in the event?#Answer: Fun activities and games#Question: Do you have any specific requests for the event?#Answer: Please come in a happy mood and try to make others happy#Question: What is the timeline for the event?#Answer: Full evening#Question: What is the expected outcome of the event?#Answer: Happy and memorable time	-The event will take place on October 15, 2022 at my home.#-The event is a get-together for family members and close relatives.#-The budget for the event is 15 lacs.#-The expected headcount for the event is 50.#-The theme of the event is casuals.#-Activities at the event will include fun activities and games.#-The timeline for the event is the full evening.#-The expected outcome of the event is a happy and memorable time.	Question 1. Is the output a valid event plan? <input checked="" type="radio"/> Yes <input type="radio"/> No <input type="radio"/> Don't Know Question 2. Does the output incorporate all the facts and information from the input? <input checked="" type="radio"/> Yes <input type="radio"/> No <input type="radio"/> Don't Know Question 3. Does the output have unrelated information that is not present in the input? <input type="radio"/> Yes <input checked="" type="radio"/> No <input type="radio"/> Don't Know Question 4. Has the output fixed any typos or grammatical errors or invalid answers present in the input, instead of copying the same? <input checked="" type="radio"/> Yes <input type="radio"/> No <input type="radio"/> Not applicable (no errors in input) <input type="radio"/> Don't Know Question 5. Can you find any example of output having additional related and contextual information written as a coherent sentence in addition to what was already present in the input? <input checked="" type="radio"/> Yes, the new information is related and coherent <input type="radio"/> No, the new information is not coherent or related <input type="radio"/> Not applicable, there is no new information <input type="radio"/> Don't Know

Submit

Figure 25: Evaluation Hitapp Full Instructions: In the task we ask you to evaluate the quality of some generated text with a specific Goal (1st column). You have to decide about the quality of the Output (Generated text)(3rd column) considering the information provided as the Input (2nd column) by answering the questions.

cricket team formation	making a cricket bat	cricket pitch curator	cricket stadium builder	scheduling cricket world cup	managing cricket team
designing jersey for a cricket team	managing relocation	booking flight	verifying packing for a trip	booking hotel for a trip	wedding planning

Figure 26: Summary of 57 additional tasks.

element	taskname/input prompt/model predictions
task	cricket stadium builder
prompt	I am a famous cricket stadium builder. I will ask clarifying question to collect information and then I will make plan of building an awesome stadium for you.
question	<p>What is the seating capacity that you desire for the stadium?</p> <p>What is the budget that you have set for the construction of the stadium?</p> <p>What is the timeline that you have set for the construction of the stadium?</p> <p>What is the location that you have chosen for the construction of the stadium?</p> <p>What is the size of the land that you have chosen for the construction of the stadium?</p> <p>What are the facilities that you desire for the stadium?</p> <p>What is the design that you have chosen for the stadium?</p> <p>What is the material that you have chosen for the construction of the stadium?</p> <p>What is the type of roof that you desire for the stadium?</p> <p>What is the lighting system that you desire for the stadium?</p> <p>What is the sound system that you desire for the stadium?</p> <p>What is the security system that you desire for the stadium?</p> <p>What is the ventilation system that you desire for the stadium?</p> <p>What is the water supply system that you desire for the stadium?</p> <p>What is the power supply system that you desire for the stadium?</p> <p>What is the waste management system that you desire for the stadium?</p> <p>What is the communication system that you desire for the stadium?</p> <p>What is the signage system that you desire for the stadium?</p> <p>What is the advertising system that you desire for the stadium?</p> <p>What is the ticketing system that you desire for the stadium?</p> <p>What is the catering system that you desire for the stadium?</p> <p>What is the medical system that you desire for the stadium?</p> <p>What is the entertainment system that you desire for the stadium?</p> <p>What is the cleanup system that you desire for the stadium?</p> <p>What is the maintenance system that you desire for the stadium?</p> <p>What is the security system that you desire for the stadium?</p> <p>What is the insurance that you desire for the stadium?</p> <p>What is the licensing that you desire for the stadium?</p> <p>What is the zoning that you desire for the stadium?</p> <p>What are the hours of operation that you desire for the stadium?</p>

Table 16: Generated questions for additional task-4 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	scheduling cricket world cup
prompt	I am a famous cricket world cup schedule maker. I will ask clarifying question to collect information and then I will make schedule of the cricket world cup for you.
questions	How many teams are participating in the cricket world cup? When does the cricket world cup start? Where is the cricket world cup being held? Which teams are playing in the cricket world cup? How long does the cricket world cup last? What is the format of the cricket world cup?

Table 17: Generated questions for additional task-5 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	managing cricket team
prompt	I am a famous cricket team manager. I will ask clarifying question to collect information and then I will make schedule of the cricket team for you.
questions	What is the name of your cricket team? When does your cricket season start? How many matches do you play in a season? Where do you play your matches? Who are your opponents in the season? What is the format of the matches? How many players are in each team? What is the duration of each match? When do you practice? Where do you practice? What is the duration of each practice session? When is the break between each practice session? When do you have your meals? What do you eat during your meals? When do you rest? When do you sleep? What is the duration of your sleep? When do you wake up? What do you do after you wake up? What are your morning activities? When do you have your breakfast? What do you eat for breakfast? When do you go to the stadium?

Table 18: Generated questions for additional task-6 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	setting field in a cricket game
prompt	I am a famous cricket team captain. I will ask some questions to collect information and then I will set the field for you.
questions	How many wickets have fallen? What is the score? Which batsman is currently batting? What is the current run rate? What is the required run rate? How many overs are remaining? What is the current bowling attack? Who is the next batsman? Who is the next bowler? What is the field? What is the weather like? What is the pitch like? What is the light like? What is the outfield like?

Table 19: Generated questions for additional task-7 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	deciding delivery to bowl in a cricket match
prompt	I am a famous bowler. I will ask some questions to collect information about the match situation, pitch condition and the opponent batsman. Then I will decide what type of delivery should I bowl in my next over.
questions	What is the current score? What is the current run rate? What is the required run rate? How many overs are remaining? What is the pitch condition? Who is the batsman? What is the batsman's score? What is the batsman's strike rate? What is the batsman's average? What is the batsman's current form? What is the batsman's weaknesses? What is the batsman's strengths? What is the batsman's approach? What is the batsman's aggression level? What is the batsman's footwork like? What is the batsman's bat speed like? What is the batsman's timing like? What is the batsman's shot selection like? What is the batsman's placement like? What is the batsman's power like? What is the batsman's ability to clear the boundary like? What is the batsman's running between the wickets like? What is the batsman's ability to rotate the strike like? What is the batsman's ability to build an innings like?

Table 20: Generated questions for additional task-8 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	creating advertisement with cricketers
prompt	I am a famous brand manager with experience in creating advertisement with cricketers. I will ask some questions to collect information and then I will design an advertisement for you.
questions	What is the name of your company? What are the products that your company manufactures? Who is your target audience? What is your budget for this advertisement? What is the name of the cricketer that you would like to feature in the advertisement? What is the message that you would like to convey through the advertisement? What is the tone of the advertisement that you would like to create? What are some of the specific details that you would like to include in the advertisement? Do you have any preference as to how the advertisement is designed? Is there anything else that you would like to include in the advertisement?

Table 21: Generated questions for additional task-9 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	designing jersey for a cricket team
prompt	I am a famous clothing brand designer with experience in designing jersey for professional cricketers. I will ask some questions to collect information and then I will design an awesome jersey for your team.
questions	<p>What colors do you want your team's jersey to be?</p> <p>What colors do you NOT want your team's jersey to be?</p> <p>What design elements would you like to see on the jersey?</p> <p>What design elements would you NOT like to see on the jersey?</p> <p>What type of jersey do you want? (Polo, T-shirt, etc.)</p> <p>What do you want your team's jersey to say? (Team name, player names, etc.)</p> <p>Anything else you want to include?</p> <p>Do you have any specific requests?</p> <p>What is your budget?</p> <p>When do you need the jersey?</p> <p>How many jerseys do you need?</p> <p>What size jerseys do you need?</p> <p>Would you like me to design a mock-up of the jersey for you?</p> <p>Would you like me to send you a sample of the jersey?</p> <p>Would you like me to make any changes to the design before finalizing it?</p> <p>Would you like me to handle the printing and shipping of the jerseys?</p> <p>Would you like me to provide you with a digital file of the design?</p> <p>Would you like me to provide you with a physical copy of the design?</p> <p>Would you like me to sign a non-disclosure agreement?</p> <p>Would you like me to sign a contract?</p> <p>Would you like to pay in full upfront, or in installments?</p> <p>Would you like to pay by check, PayPal, or credit card?</p> <p>Would you like a refund if you are not satisfied with the final product?</p> <p>Would you like to leave a deposit?</p> <p>How did you hear about me?</p> <p>Have you worked with a clothing designer before?</p> <p>Do you have any questions for me?</p> <p>Is there anything else you would like to add?</p> <p>Would you like to schedule a consultation?</p> <p>Would you like to provide me with your contact information?</p> <p>Would you like me to provide you with my contact information?</p> <p>What is your name?</p> <p>What is your email address?</p> <p>What is your phone number?</p> <p>What is your mailing address?</p> <p>What is your team's name?</p> <p>What is your team's colors?</p> <p>What is your team's mascot?</p> <p>What is your team's home stadium?</p> <p>What is your team's home city?</p> <p>What is your team's home state?</p> <p>What is your team's home country?</p> <p>What is your team's division?</p> <p>What is your team's league?</p> <p>What is your team's website?</p> <p>What is your team's Facebook page?</p> <p>What is your team's Twitter handle?</p> <p>What is your team's Instagram handle?</p> <p>What is your team's YouTube channel?</p> <p>What is your favorite thing about your team?</p> <p>What is your least favorite thing about your team?</p> <p>What are your team's strengths?</p> <p>What are your team's weaknesses?</p> <p>What is your team's biggest accomplishment?</p>

Table 22: Generated questions for additional task-10 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	managing relocation
prompt	I am a famous manager in a packer's and mover's company. I will ask some questions to collect information and then I will design a relocation plan for you.
questions	What is the approximate size of your current home? What is the approximate size of your new home? What is the approximate distance between your current home and your new home? What is the approximate number of belongings that you need to move? Do you have any special items that require extra care during the move (e.g. pianos, antique furniture, etc)? What is your budget for the move? When do you need to be moved by? Do you have any pets that will need to be moved with you? Do you have any plants that will need to be moved with you? Do you have any other special requirements or requests for your move?

Table 23: Generated questions for additional task-11 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	booking flight
prompt	I am a famous flight booking agent. I will ask some questions to collect information and then I will book appropriate flights for you.
questions	What is your name? What is your travel destination? When do you plan to travel? How many people are traveling? What is your budget for this trip? What is your preferred airline? Do you have any preferred times for your flights? Do you have any preferences for your seat on the plane? Would you like to add any extra amenities to your flight? Do you have any special requests?

Table 24: Generated questions for additional task-12 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	verifying packing for a trip
prompt	I am here to check if you have packed every-thing for your upcoming trip. I will ask some questions to collect information and then I will tell you what else you need to pack.
questions	Have you packed your clothes? Have you packed your toothbrush and toothpaste? Have you packed your shampoo and conditioner? Have you packed your sunscreen? Have you packed your insect repellent? Have you packed your first-aid kit? Have you packed your camera? Have you packed your phone charger? Have you packed your sunglasses? Have you packed your hat? Have you packed your bathing suit? Have you packed your flip flops? Have you packed your books? Have you packed your laptop? Have you packed your chargers? Have you packed your snacks?

Table 25: Generated questions for additional task-13 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	booking hotel for a trip
prompt	I am a famous hotel booking agent. I will ask some questions to collect information and then I will book an awesome hotel for your trip.
questions	What is the name of the city you are traveling to? What is the name of the hotel you are interested in? What are the dates of your stay? What is your budget? What kind of room are you interested in? What are your preferred amenities? Do you have any special requests? What is your name? What is your contact information? Is there anything else you would like me to know?

Table 26: Generated questions for additional task-14 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	wedding planning
prompt	I am a famous wedding planner. I will ask some questions to collect information and then I will plan an awesome wedding for you.
questions	<p>What is the budget for the wedding?</p> <p>What is the date of the wedding?</p> <p>What is the venue for the wedding?</p> <p>What is the bride's vision for the wedding?</p> <p>What is the groom's vision for the wedding?</p> <p>What is the theme of the wedding?</p> <p>What is the color scheme of the wedding?</p> <p>What is the style of the wedding?</p> <p>What is the number of guests expected at the wedding?</p> <p>What is the menu for the wedding?</p> <p>What is the cake for the wedding?</p> <p>What is the entertainment for the wedding?</p> <p>What are the flowers for the wedding?</p> <p>What is the photographer for the wedding?</p> <p>What is the videographer for the wedding?</p> <p>What is the transportation for the wedding?</p> <p>What is the wedding dress?</p> <p>What is the groom's attire?</p> <p>What are the bridesmaids' dresses?</p> <p>What are the groomsmen's attire?</p> <p>What is the flower girl's dress?</p> <p>What is the ring bearer's attire?</p> <p>What is the rehearsal dinner?</p> <p>What is the honeymoon?</p> <p>What are the wedding favors?</p> <p>What is the wedding cake topper?</p> <p>What is the music for the wedding?</p> <p>What is the first dance?</p> <p>What is the father/daughter dance?</p> <p>What is the mother/son dance?</p> <p>Is there anything else you would like to include?</p>

Table 27: Generated questions for additional task-15 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	wedding invitation verification
prompt	I am here to check if you have invited everyone to your wedding. I will ask some questions to collect information and then I will tell you who else you need to invite.
questions	How many guests are you expecting? Have you invited your immediate family members? Have you invited your extended family members? Have you invited your friends? Have you invited your colleagues? Have you invited your neighbors? Is there anyone else you would like to invite? Do you have a final guest list?

Table 28: Generated questions for additional task-16 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	wedding dinner menu preparation
prompt	I am a famous chef who cooks at wedding dinners. I will ask some questions to collect information and then I will tell the menu for your wedding.
questions	What is the bride and groom's favorite food? What is the bride and groom's favorite drink? What type of wedding are you having? What is your budget for the catering? Are there any guests with dietary restrictions? What is the theme of the wedding? What is the date of the wedding? What is the time of the wedding? Where is the wedding taking place?

Table 29: Generated questions for additional task-17 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	wedding match maker
prompt	I am a famous wedding match maker. I will ask some questions to collect information and then I will find a perfect match for you.
questions	<p>How old are you?</p> <p>Do you want a traditional or modern wedding?</p> <p>What is your budget?</p> <p>What is your favorite color?</p> <p>What is your favorite flower?</p> <p>What is your favorite season?</p> <p>What is your favorite food?</p> <p>What is your favorite music genre?</p> <p>What is your dream wedding venue?</p> <p>Do you have any specific themes or ideas in mind?</p> <p>What is the most important thing to you on your wedding day?</p> <p>Do you have any allergies or dietary restrictions?</p> <p>What is your religion?</p> <p>Do you have any cultural or family traditions that you would like to incorporate into your wedding?</p> <p>Do you have any other special requirements or requests?</p> <p>Is there anything else you would like me to know?</p>

Table 30: Generated questions for additional task-18 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	bridge construction planning
prompt	I am a famous project planner of a construction company. I will ask some questions to collect information and then I will make a perfect plan for constructing a bridge.
questions	<p>What is the purpose of the bridge?</p> <p>How long does the bridge need to be?</p> <p>How many lanes does the bridge need to have?</p> <p>What is the maximum weight that the bridge can support?</p> <p>What is the expected lifespan of the bridge?</p> <p>What is the budget for the project?</p> <p>When does the project need to be completed?</p> <p>What are the dimensions of the bridge?</p> <p>What is the height of the bridge?</p> <p>What is the clearance under the bridge?</p> <p>What is the soil type in the area?</p> <p>What is the water depth in the area?</p> <p>What is the tide range in the area?</p> <p>What is the wind speed in the area?</p> <p>What is the temperature in the area?</p> <p>What is the weather like in the area?</p> <p>What is the traffic volume in the area?</p> <p>What is the terrain in the area?</p> <p>What is the geology in the area?</p> <p>What is the topography in the area?</p> <p>What is the vegetation in the area?</p> <p>What is the land use in the area?</p> <p>What are the restrictions in the area?</p> <p>Is the area accessible?</p> <p>What is the soil stability in the area?</p> <p>What is the rock quality in the area?</p> <p>What is the foundation depth in the area?</p> <p>What is the water table in the area?</p> <p>What is the water pressure in the area?</p> <p>What is the seismic activity in the area?</p> <p>What is the wind loading in the area?</p> <p>What is the snow load in the area?</p> <p>What is the ice load in the area?</p> <p>What are the construction materials available in the area?</p> <p>What is the construction method that will be used?</p> <p>What is the estimated cost of the project?</p> <p>When is the project scheduled to be completed?</p> <p>What are the risks associated with the project?</p> <p>What are the mitigation measures that will be taken?</p> <p>What are the benefits of the project?</p> <p>What are the drawbacks of the project?</p> <p>What is the expected traffic volume?</p> <p>What are the expected traffic patterns?</p>

Table 31: Generated questions for additional task-19 along with the prompt fed to GPT3.

element	taskname/input prompt/model predictions
task	hospital setup planning
prompt	I am a famous planner with a lot of experience in setting up hospitals. I will ask some questions to collect information and then I will make a perfect plan setting up a hospital in your area.
questions	<p>What is the current state of healthcare in your area?</p> <p>What are the biggest challenges that need to be addressed in terms of healthcare in your area?</p> <p>What is the population of your area?</p> <p>What is the average income of residents in your area?</p> <p>What is the land area of your area?</p> <p>Is there a need for a new hospital in your area?</p> <p>What type of hospital do you think would be most beneficial for your area?</p> <p>What services do you think should be offered at the new hospital?</p> <p>Do you have any ideas about where the new hospital should be located?</p> <p>Do you have any ideas about how the new hospital should be funded?</p> <p>Do you have any other ideas or suggestions about setting up a new hospital in your area?</p>
