

It's good to be ϕ : a solution to a problem of Gosper and Knuth*

We present the solution to a problem presented by Knuth, attributed to Gosper [2].

Proposition 1. *Let ϕ denote the golden ratio. Then,*

$$\phi = \frac{2^{2/5} \sqrt{5} \Gamma(\frac{1}{5})^4}{\Gamma(\frac{1}{10})^2 \Gamma(\frac{3}{10})^2}.$$

Proof. The proof relies on two equalities below. These equalities are listed on the *MathWorld* entry for the “Gamma Function” [3]; they are attributed to techniques within [1] and generated by M. Trott [3].

$$\Gamma\left(\frac{1}{10}\right) = \frac{\sqrt[4]{5} \sqrt{1+\sqrt{5}} \Gamma\left(\frac{1}{5}\right) \Gamma\left(\frac{2}{5}\right)}{2^{7/10} \sqrt{\pi}} \quad (1)$$

$$\Gamma\left(\frac{3}{10}\right) = \frac{(\sqrt{5}-1) \sqrt{\pi} \Gamma\left(\frac{1}{5}\right)}{2^{3/5} \Gamma\left(\frac{2}{5}\right)} \quad (2)$$

By applying lines 1 and 2, we have:

$$\frac{2^{2/5} \sqrt{5} \Gamma\left(\frac{1}{5}\right)^4}{\Gamma\left(\frac{1}{10}\right)^2 \Gamma\left(\frac{3}{10}\right)^2} = \frac{2^{2/5} \sqrt{5} \Gamma\left(\frac{1}{5}\right)^4}{\left[\frac{\sqrt[4]{5} \sqrt{1+\sqrt{5}} \Gamma\left(\frac{1}{5}\right) \Gamma\left(\frac{2}{5}\right)}{2^{7/10} \sqrt{\pi}}\right]^2 \left[\frac{(\sqrt{5}-1) \sqrt{\pi} \Gamma\left(\frac{1}{5}\right)}{2^{3/5} \Gamma\left(\frac{2}{5}\right)}\right]^2} \quad (3)$$

$$= \frac{2^{2/5} \sqrt{5} \Gamma\left(\frac{1}{5}\right)^4}{\frac{\sqrt{5} (1+\sqrt{5}) \Gamma\left(\frac{1}{5}\right)^2 \Gamma\left(\frac{2}{5}\right)^2 \cdot (\sqrt{5}-1)^2 \pi \Gamma\left(\frac{1}{5}\right)^2}{2^{7/5} \pi \cdot 2^{6/5} \Gamma\left(\frac{2}{5}\right)^2}} \quad (4)$$

$$= \frac{8}{(1+\sqrt{5}) \cdot (\sqrt{5}-1)^2} \quad (5)$$

$$= \frac{2}{\sqrt{5}-1} = \phi \quad (6)$$
