Abstract

These are the guidelines for the application of SNACS (Semantic Network of Adposition and Case Supersenses; [Schneider et al. 2018](#)) to Modern Standard Hindi of Delhi. SNACS is an inventory of 50 supersenses (semantic labels) for labelling the use of adpositions and case markers with respect to both lexical-semantic function and relation to the underlying context. The English guidelines ([Schneider et al., 2020](#)) were used as a model for this document.

Besides the case system, Hindi has an extremely rich adpositional system built on the oblique genitive, with productive incorporation of loanwords even in present-day Hinglish.

This document is aligned with version 2.5 of the English guidelines.

1 Overview

This document is *supplementary* to the SNACS v2.5 guidelines for English (Schneider et al., 2020). It focusses on phenomena specific to Hindi–Urdu, while also attempting to give illustrative examples of the whole inventory of supersenses. We hope this will be useful in annotating typologically similar languages of South Asia, as well as a contribution to the literature on case in Hindi–Urdu.

Taking a page from the Korean guidelines (Hwang et al., 2021), we also cover a new top-level supersense group **CONTEXT**.

1.1 Hindi and Urdu

Hindi and Urdu are two Indo-Aryan-family lects that share a nearly identical grammar, and are best characterised as two diverging registers of one pluricentric language (Kachru, 2009). The combined language is generally called Hindi–Urdu or Hindustani in linguistic literature. While the corpus that was annotated during the creation of these guidelines was written in literary Hindi in the Devanagari script, this document aims to cover both Hindi and Urdu.

To that end, all examples are given in transliteration using a system inspired by the International Alphabet of Sanskrit Transliteration (IAST), similar to the rule-based transliteration algorithm used on the English Wiktionary.

Hindi and Urdu diverge lexically even in postposition choice, especially in formal or literary contexts. For example, for the **LOCUS** postposition meaning ‘around’, Hindi generally uses **kī_cārom_or** (‘on all four sides’; *or* ‘side’ < Sanskrit *avarā*) while Urdu uses **ke_ird-gird** (< Persian *gird* ‘round’). An attempt is made to give examples from both registers.

1.2 What counts as an adposition in Hindi–Urdu?

Following Masica (1993), we annotated the Layer II and III function markers in Hindi. These include all of the simple case markers¹ and all of the adpositions.² Our guidelines on the differentially-marked ergative and accusative cases are also applicable to unmarked verbal arguments, but these were not annotated in the first corpus.

We also decided to annotate the suffix *vālā* when used in an adjectival sense (e.g. *choṭā-vālā kamrā* ‘the room that is small’), the comparison terms *jaisā* and

¹ *ne* (ergative), *ko* (dative-accusative), *se* (instrumental-ablative-comitative), *kā/ke/k* (genitive), *meṃ* (locative-IN), *tak* (allative), *par* (locative-ON). Declined forms of the pronouns (including the reflexive *apnā*) were also included.

² An open class, given the productivity of the oblique genitive *ke* as a postposition former.

jaise, the extent and similarity particle *sā* (*choṭā-sā kamrā* ‘small-ish room’), and the emphatic particles *bh*, *hī*, *to* (Koul, 2008, 137–156). All of these modify the preceding token and mediate a semantic relation between their object and the object’s governor, just as conventionally-designated postpositions do.

1.3 Background

This section covers some of the literature and past work we broadly relied on in constructing these guidelines. The main Hindi grammar we referenced was Koul (2008).

SNACS. There has been a great deal of work on SNACS across many languages. Those there were generally relevant to this whole document are Schneider et al. (2018, 2020). For annotating verbal arguments, we started with Shalev et al. (2019) which established a baseline for dealing with subjects and objects. Archana Bhatia did some initial work on annotating *The Little Prince* in Hindi in a much earlier SNACS standard.

Comparisons with Korean (Hwang et al., 2021, 2020), German (Prange and Schneider, 2021), and Gujarati³ were especially useful in formulating these guidelines. Discussions with the CARMLS research group (particularly Jena Hwang and Vivek Srikumar) and reviewer comments on our work at SIGTYP and SCiL (Arora and Schneider, 2020; Arora et al., 2021) were also instrumental for this work.

Spatial expressions and motion. Making sense of the locative cases and their roles as verbal arguments has relied largely on Khan (2009) (to disentangle the various functions of locatives) and Narasimhan (2003) (to understand the framing of motion events).

Verbal arguments. Much of the guidelines on annotating PARTICIPANT-type roles deal with verbal argument structure. There is a great deal of work on this issue in both linguistics and computational linguistics for Hindi. In theoretical linguistics, there is Mohanan (1994), Butt (1993).

Work on case in Hindi includes general work on differential argument-marking (de Hoop and Narasimhan, 2005), dative subjects (Butt et al., 2006; Mohanan and Verma, 1990), and typology (Khan, 2009).

The Hindi–Urdu Treebank Project has dominated work on verbal argument structure in computational linguistic work on Hindi. It utilises two models of

³Personal communication with Maitrey Mehta.

Hindi syntax: a dependency grammar inspired by the traditional *kāraka* system (Vaidya et al., 2011), and a modern phrase-structure grammar (Palmer et al., 2009; Bhatt et al., 2013). Bhatt says that the two annotations are analogous to Lexical-Functional Grammar (LFG)’s f-structure and c-structure (when traces are removed from the PSG parse).

Other projects in this field are the Hindi–Urdu PropBank⁴ (Bhatia et al., 2013a; Vaidya et al., 2013), the separate Urdu PropBank (Anwar et al., 2016; Bhat et al., 2014), and Urdu/Hindi VerbNet⁵ (Hautli-Janisz et al., 2015).

Force dynamics. Some of the biggest issues in porting SNACS to Hindi have been in the realm of force dynamics. Constructions with modal auxiliaries, causatives (Begum and Sharma, 2010), and forced actors are still issues in the guidelines. These are common constructions in South Asian languages, so a resolution to these issues will be necessary as annotation work moves ahead on other languages (e.g. Gujarati).

1.4 Organisation

All examples are written in transliterated form using the International Alphabet of Sanskrit Transliteration (IAST), approximating the spoken pronunciation (i.e. schwa deletion is accounted for). We provide glosses and translations only for illustrative examples in an effort to keep the document concise.

The structure of **CIRCUMSTANCE** and **CONFIGURATION** is the same as the English guidelines. For **PARTICIPANT**, each subsection is a case marker or postposition (instead of a supersense) given the varied functions and scene roles taken on by each marker.

For reference, below is a supersense index for **PARTICIPANT**. Note that the genitive marker **kā** (§3.5) can nominalise many of these relations.

- **CAUSER**: **ne** (§3.1.1)
- **AGENT**: **ne** (§3.1.1), **ko** (§3.2.2), **se** (§3.4.4)
- **THEME**: **ko**, **kā**, **par** (§3.2.1)
- **TOPIC**: **ke_bāre_meṁ** etc. (§3.3)
- **ANCILLARY**: **se**, **ke_sāth** (§3.4.3), **ke_binā** (§3.8)
- **STIMULUS**: **ko**, **kā**, **par** (§3.2.1), **se** (§3.4.2, §3.4.3)
- **EXPERIENCER**: **ko** (§3.2.2), **ne** (§3.1.1)
- **ORIGINATOR**: **ne** (§3.1.1), **se** (§3.4.2)

⁴The frameset files are available at <http://verbs.colorado.edu/propbank/framesets-hindi/>.

⁵Urdu/Hindi VerbNet took a more SNACS-like approach to annotating lexical semantics of verbal arguments, but was not pursued to make a large resource for verb frames.

- **RECIPIENT:** **ko** (§3.2.2), **ne** (§3.1.1)
- **COST:** **ke_liye** (§3.6)
- **BENEFICIARY:** **ke_liye** (§3.6), **ke_xilāf**, **ke_viruddh** (§3.7), **ko** (§3.2.2)
- **INSTRUMENT:** **se** (§3.4.1)

2 CIRCUMSTANCE

	OBL	mem	par/pe	se	tak	ko	ke_lie
CIRCUMSTANCE		✓	✓				✓
LOCUS		✓	✓				
SOURCE				✓			
GOAL	✓				✓	✓	
EXTENT	✓				✓		✓
TIME	✓	✓	✓			✓	
STARTTIME				✓			
ENDTIME					✓		
DURATION	✓	✓					✓

Table 1: Functions for some of the basic spatio-temporal postpositions and case markers. Note that the **LOCUS** scene is permissible for **se** and **tak** in fictive motion, and that **mem** and **par/pe** can take a **GOAL** scene when licensed by a motion verb. **DIRECTION** and **INTERVAL** are spatio-temporal parallels, but are not in this table because they are marked by several idiosyncratic postpositions.

CIRCUMSTANCE is used directly as a scene role when some additional information is added to contextualize the main event. These tend to involve locative postpositions: **mem**, **par**, etc.

- (1) durghaṭnā **mem** do log ghāyal hue.
accident LOC two people injured be.PFV
'Two people were injured in the accident.'
- (2) Koronā kāl **ke_calte...** (**CIRCUMSTANCE**→**TIME**)
coronavirus epoch during
'As the Age of Coronavirus continued...'

It is used for **setting events**, often construed as a **LOCUS** and perhaps serving as an answer to a location-based question, but the postposition itself does not give an explicit location.

- (3) kām **par** (**CIRCUMSTANCE**→**LOCUS**)
work LOC
'at work'

It is also used for **occasions**, when the event is only the background for the action (rather than a cause).

- (4) janamdin **ke_lie** kyā kiyā?
 birthday for what do.PFV
 ‘What did you do for your birthday?’
- (5) āpne lañc **meñ** kyā khāyā?
 you.ERG lunch LOC what eat.PFV
 ‘What did you eat for lunch?’

2.1 TEMPORAL

Not used directly so far.

2.1.1 TIME

meñ indicates temporal placement in the context of some span of time (e.g. a day, a month, a century). **ko**, **par**, and **pe** are optionally used in a similar manner (Koul, 2008). Note that these fixed time postpositional markers are often optional.

- (6) a. ham jānvarī **meñ** mileñge.
 we January LOC meet.FUT
 ‘We will meet in January.’
- b. kam umr **meñ**
 less age LOC
 ‘at a young age’
- (7) kaun jāne kal **ko** kyā hogā?
 who know tomorrow DAT what be.FUT
 ‘Who knows what will happen in the future?’
- (8) 2012 kī ardhrātri **ke_samay** śahar ke logorñ ko ek dhamāke kī āvāz ne ÷arā
 diyā.

Relative time markers such as **ke_bād** “after” and **se_pahle** “before” are also included. However, if the difference in time is explicitly stated that the construal **TIME**→**INTERVAL** is used.

- (9) disambar **ke_bād**
 December after
 after December
- (10) disambar **ke_do** mahīne **_bad** (**TIME**→**INTERVAL**)
 December GEN two months after
 two months after December

Finally, adpositions that pick out an arbitrary point in time from a duration such as **ke_daurān** “during”, **kī_avdhi_mem** “in the interval of” also take this as scene role and function.

Discussion. This is the only context in which **ko** would create an adverb. It doesn’t fit under any other function very well. **TIME~GOAL** was considered at some point but the grammatical functions are entirely different.

It was elected to not mix time and location in construals, following the precedent of [Schneider et al. \(2020\)](#).

STARTTIME The prototypical postposition is **se**.

- (11) mujhe kal **se** ṭhanḍ lag rahī hai.
 I.DAT yesterday ABL coldness feel CONT be.PRS
 ‘I have been feeling cold since yesterday.’

Unlike the equivalent English *since*, **se** can also be used to delineate the beginning of an interval of time.⁶ In this sense, it was decided the construal **STARTTIME~INTERVAL** is appropriate; the interval is not specified to have an endpoint so it does not fit the definition of **DURATION**.⁷

- (12) barsom **se** yuddh ho rahī hai
 years ABL war be CONT be.PRS
 ‘The war has been raging since years ago.’

ENDTIME The prototypical postposition is **tak**. **STARTTIME** is an exact counterpart of this, and the **ENDTIME~INTERVAL** construal applies for a durative use.

- (13) kal se kal **tak**
 yesterday ABL tomorrow ALL
 ‘from yesterday until tomorrow’

Discussion. For the durative uses of **se** and **tak** it was difficult to come to a consensus on the label; the alternative option (e.g. for **se**) was **DURATION~STARTTIME**. We felt that the difference between durative and non-durative was morphosyntactic rather than semantic.

⁶This difference is especially apparent in Indian English, where even the formal register permits constructions like *since two years* for standard *since two years ago*.

⁷[Goel et al. \(2020\)](#), in Hindi TimeBank, classify this as a **DURATION**, on the basis that an interval of time is referred to (regardless of whether the **ENDTIME** is known).

2.1.2 FREQUENCY

The prototypical examples for **FREQUENCY** are expressed through reduplication (e.g. *kabhī-kabhī* ‘sometimes’) rather than a postposition.

For iterations marked ordinally with **ke_lie**, **FREQUENCY** is used:

- (14) *tīsrī bār ke_lie*
third time for
for the third time

2.1.3 DURATION

DURATION covers two types of postpositions that are distinct in Hindi. **mem** focuses on the duration involved in achieving some outcome.

- (15) a. *kitne din mem likh pāoge?*
how.many days LOC write be.able.FUT
‘In how many days will you be able to write it?’
b. *do sāl mem do bār kiyā.*
two years LOC two times do.PFV
‘I did it twice in two years.’

ke_lie focuses on the duration over which an action occurs. The action occurs continuously over that span.

- (16) a. *kitne din ke_lie likh pāoge?*
how.many days for write be.able.FUT
‘For how many days will you be able to write? [e.g. said to a journalist]’

2.1.4 INTERVAL

This role is fulfilled by plain **pahle** ‘ago’ and **bād** ‘later’ when they are attached to a unit of time. Note that by themselves they are adverbs meaning ‘earlier’ and ‘later’.

- (17) *do sāl pahle*
two years ago
‘two years ago’

2.2 LOCUS

LOCUS is prototypically used to indicate a static location, whether literal or abstract (e.g. location on the Internet).

For **meṁ** ‘in’, this is within some enclosing entity (e.g. a geographical area, a container, a building). It cannot be a point location. **ke_andar** ‘inside of’ functions similarly.

- (18) a. mair̄ṁ mumbaī **meṁ** rahtā hūṁ.
1SG Mumbai LOC stay.PRS.HAB be.PRS
‘I live in Mumbai.’
b. us bakse **meṁ** kyā hai?
that box LOC what be.PRS
‘What is in that box?’
- (19) baṛe-baṛe deśor̄ṁ **meṁ** aisī choṭī-choṭī bāteṁ hotī rahtī hair̄ṁ, Senyoritā!
(20) bakse **ke_andar**

For **par** and **pe**, on the other hand, the location may be a point, but it has to be an entity on top of or over which something can be placed.

- (21) a. ghar **pe**
home at
‘at home’
b. bakse **par**

All the other various relative static location adpositions are treated as **LOCUS** as well.

- (22) zamīn **ke_ūpar**
(23) āsmān **ke_nīce**
(24) gāṛī **ke_pās** do log khaṛe hair̄ṁ
(25) uskī **cāror̄ṁ_or** pānī thā
3SG.GEN.around water be.PST
‘There was water all around her.’

Hindi also can express static locations using dynamic postpositions, a phenomenon called **fictive motion**.

- (26) chat **se** pūrā śahar dikhtā hai (LOCUS→SOURCE)
roof ABL full city be.seen.HAB be.PRS
‘The whole city is visible from the roof.’

(27) saṛak nadī **ta**k jāṭī hai. (LOCUS~GOAL)

Connection verbs. Various verbs that indicate connection and take an argument in the comitative, when dealing with static events, are labelled LOCUS~ANCILLARY.

(28) nāv peṛ **se** bandhī hai.
boat tree COM be.tied.PFV COP.PRS
'The boat is tied to the tree.'

These also have motion equivalents when licensed by a non-stative verb. See under GOAL.

Discussion. It is unclear how to treat habitual tense verbs that can be ambiguously construed as static or dynamic.

(29) nadī samundar **ta**k bahtī hai.
river ocean ALL flow.HAB COP.PRS
The river flows till the ocean.

Is this a statement of fact about where the river ends (thus LOCUS~GOAL), or is it the present flowing of the river to that endpoint (thus GOAL)? We fall back on the most literal reading (so GOAL) in case of ambiguity. This is part of an open issue cross-lingually, see #120en.

2.2.1 SOURCE

The prototypical postposition for this is **se**, which often takes on the SOURCE function even in other roles. In this function it is comparable to English *from*.

(30) vah kal hī dillī **se** niklī.
3SG yesterday EMPH Delhi ABL leave.PFV
'She left Delhi just yesterday.'

This scene also covers initial states before a transformation.

(31) mairṁne māṭī **se** banāyā.
1SG.ERG clay ABL make.PFV
'I made it out of clay.'

2.2.2 GOAL

GOAL indicates a final location or state. Many motion verbs do not explicitly mark the endpoint of motion, instead treating it as a direct object. The case markers **ko** and **tak** do have prototypical **GOAL** functions, and can be optionally used to mark those objects.

- (32) main dillī (**ko**) gayā.
1SG Delhi to go.PFV
'I went to Delhi.'

All of the locative postpositions and case markers can take on a **GOAL** scene role if licensed by a motion verb. Hindi syntactically patterns with verb-framed languages, but path is usually lexicalized in postpositions (Narasimhan, 2003).

Connection verbs. Various verbs that indicate connection and take an argument in the comitative, when dealing with dynamic events, are labelled **GOAL**→**ANCILLARY**.

- (33) nāv ko peṛ **se** bāndho.
boat ACC tree COM tie.IMP
'Tie the boat to the tree.'

These also have static senses. See under **LOCUS**.

2.3 PATH

This is traditionally called the perlocative case, which is expressed with the ubiquitous **se**. Unlike English, there is not much variety in **PATH** adpositions (*over*, *across*, *through*, as well as uses of static location markers), but postposition stacking is permissible with **se**.

- (34) railī dillī **se** guzrī thī.
rally Delhi PERL pass.PFV COP.PST
'The rally passed through Delhi.'
- (35) a. havāi-jahāz mere_ūpar_{LOCUS} **se** gayā.
airplane 1SG.above via go.PFV
'The plane flew over me.'
- b. vo śaitān mere_pīche_{LOCUS} **se** bhāg gayā!

se_hokar also marks a **PATH** (Narasimhan, 2003, p. 150).

Discussion. There is a **PATH**→**INSTRUMENT** construal in English for e.g. “escape **by** tunnel”, but there does not seem to be anything instrumental about the equivalent Hindi construction, so we just treat it as a **PATH**.

2.3.1 **DIRECTION**

DIRECTION is the static or dynamic orientation of something. The prototypical markers for this are **kī_taraf**, **kī_or**, and **kī_diśā**, all grammaticalised from the literal meaning ‘in the direction of’.

- (36) mair̄ darvāze **kī_taraf** cal rahā thā.
 1SG door.OBL in.direction.of walk CONT COP.PST
 ‘I was walking towards the door.’

Like in English, some motion adverbs⁸ satisfy the definition of **DIRECTION** and thus are fair game for annotation. A list of these is in table 2.

- (37) mair̄ **bāhar** jāne kā soc rahā thā.
 1SG outside go.INF.OBL GEN think CONT COP.PST
 ‘I was thinking of going outside.’
- (38) vo **sīdhe** calā.
dāyer̄
bāyer̄
vāpas

Distance. Static distance uses the construal **LOCUS**→**DIRECTION**, since it refers to a fixed point in space but in a way as to emphasise the distance is movement away from another point. **se_dūr** and **ke_dūr** are used in this way.

- (39) dillī hamāre gāmv̄ **se_bīs** kilomīṭar **_dūr** hai.
 Delhi 1PL.GEN town ABL twenty kilometres far COP.PRS
 ‘Delhi is ten kilometres away from our town.’

⁸Unlike in English, where words like *behind*, *up*, etc. can also be analysed as intransitive prepositions or particles, there is generally no disagreement in Hindi grammar on the status of motion adverbs as adverbs. They are formed from the oblique case of nouns, like many other non-motion adverbs.

āge	ahead	piche	behind
sāmne	in front	bāhar	outside
ūpar	up	nīce	down
dāyem, dāhine, sīdhe	right	bāyem, ulṭe	left
sīdhe	straight	ulṭe	backwards
dūr	far	pās, qarīb, nazdīk	near

Table 2: Some motion adverbs in Hindi.

2.3.2 EXTENT

When referring to scalar values or changes on a scale, **tak** has the role of **EXTENT**. **kā** can function similarly, but take a construal **EXTENT**→**IDENTITY** since it equates two things.

- (40) hamem mīlom **tak** bhāgnā paṛā.
 1 PL.DAT miles.OBL ALL run.INF have.to.PFV
 ‘We had to run for miles.’
- (41) sau rupaye **kā** munāfā (**EXTENT**→**IDENTITY**)
 hundred rupees GEN profit
 ‘a profit of 100 rupees’

Often, this kind of semantic relation is not marked by an adposition or case marker, and is instead a core argument of the verb.

- (42) dām [das pratiśat]**EXTENT** baṛhā.
 price ten percent increase.PFV
 ‘The price increased by 10%.’

jitnā ... utnā Hindi’s **jitnā ... utnā** construction functions exactly the same as the English *as ... as* (except reversed) and is annotated on the same semantics.

- (43) vo **jitnā**_{COMPARISONREF} kar saktā thā **utnā**_{EXTENT} usne kiyā.
 3SG as.much do can.HAB COP.PST that.much 3SG.ERG do.PFV
 (S)he did as much as (s)he could.
- (44) jagah **jitnī**_{COMPARISONREF} sundar hai **utnī**_{CHARACTERISTIC}→**EXTENT** xatarnāk hai.

sā The postposition **sā** is difficult to translate succinctly into English, but in that sense that it means ‘rather’ or ‘pretty’ (when modifying an adjective) it is best labelled by **EXTENT**. The other sense of it is covered under **COMPARISONREF**.

- (45) acchā **sā** ādmī
 good rather man
 ‘a rather good man’

2.4 **MEANS**

MEANS describes a secondary action or event utilised towards performing the verb at hand. A gerund (or other nominal that refers to an action) as an instrumental argument marked with **se** to a verb is **MEANS**.

- (46) unhoṛne golibārī **se** badlā liyā.
 3PL.ERG shooting INS revenge take.PFV.
 ‘They retaliated with shootings.’
- (47) zyādā tez bhāgne **se** ṭāng toṛ dī.

2.5 **MANNER**

The *how* of a situation, usually an adverbial phrase.

- (48) a. merī bāt dhyān **se** suno.
 1SG.GEN talk care INS list.IMP
 ‘Listen to me carefully.’
- b. gāltī **se**
 zor
 pyār
- (49) a. usne ḡusse **meṁ** kah diyā.
 3SG.ERG anger LOC say give.PFV
 ‘He rashly said it in anger.’
- b. ham gujarātī **meṁ** bāt kar rahe haiṁ.
- (50) agar āp **binā**_ ovan **_ke** kek banā rahī hai
 if 2PL without oven GEN cake make CONT COP.PRS
 ‘if you are making a cake without an oven’

When a comparison postposition is used adverbially (e.g. **jaise**) it also gets the scene role of **MANNER**.

(51) **MANNER**→**COMPARISONREF**:

- a. tū jānvar **kī_tarah** khātā hai.
2SG animal like eat.HAB COP.PRS.
'You eat like an animal.'

2.6 **EXPLANATION**

The *why* of a situation. The instigating event of another event is an **EXPLANATION**.

- (52) a. merī **vajah_se** sab garbaḥ huā.
1SG.because everything messed.up COP.PFV
'Everything went wrong because of me.'
b. uske na jāne **ke_kāraṅ** maiṁ ghar pe rahā.
- (53) ḡusse **se** rūṭhnā (**EXPLANATION**→**SOURCE**)
- (54) aur dambh **se** phūlā rahtā hai. (**EXPLANATION**→**SOURCE**)
and pride ABL swell.PFV CONT.HAB COP.PRS
'And he is always swelled with pride.'

Fossilised uses of liye The postposition **liye** 'because' by itself is very uncommon in modern Hindi, but its more common derivatives **isliye** 'for this reason' and **kisliye** 'why?' are still labelled **EXPLANATION** or **PURPOSE**.

2.6.1 **PURPOSE**

PURPOSE is the motivation behind an action performed (or intended to be performed) by an animate entity. **ke_liye** is the prototypical adposition that takes this label. The intended outcome of an action is a **PURPOSE**.

- (55) vo bhāṣaṅ dene **ke_liye** uṭhī.
3SG speech give.INF.OBL for rise.PFV.
'She rose to deliver a speech.'

Intended use of something.

- (56) a. pīne **ke_liye** kyā cāhiye?
drink.INF.OBL for what want
'What do you want to drink?'
b. pīne **ko** kyā cāhiye?

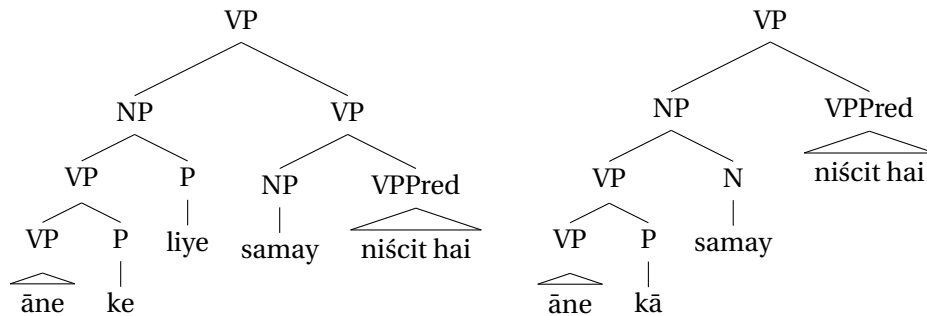

Something on which an action is contingent.

- (57) a. sone **ke_liye** koī jagah hai?
 sleep.INF.OBL for any place COP.PRS
 'Is there any space to sleep?'
 b. film dekhne **ke_liye** paise nahīn hai.

Alternations between *kā* and *ke_liye*. There are many cases where *ke_liye* and *kā* are interchangeable. In such cases, it is important to check if syntactic differences arise by the exchange: *kā* can form a genitive PP that is a constituent of an NP, but *ke_liye* obligatorily marks an adjunct. Compare:

- (58) pīne **kā** pāni (CHARACTERISTIC; cf. (56))
 drink.INF.OBL GEN water
 'drinking water'
- (59) a. [āne **ke_liye**] [samay niścīt hai]. (PURPOSE)
 come.INF.OBL for time fixed COP.PRS
 'For arriving, the time is fixed.'
 b. [āne **kā** samay] niścīt hai. (GESTALT)
 come.INF.OBL GEN time fixed COP.PRS
 'The arrival time is fixed.'

Or analysed using [Bhatt et al. \(2013\)](#)'s phrase-structure grammar:

3 PARTICIPANT

Verb type	Agent
Intransitive	NOM
Transitive	NOM, ne
Experiencer	ko
[Passive]	se
[Modal]	ko
[Nominalised]	kā

Table 3: The various markers used for the proto-Agent argument to a verb in Hindi. The verb “classes” in brackets are grammatical alternants of any of the verbs.

3.1 Case marker: **ne**

As Hindi is a split-ergative language, showing both nominative–accusative and ergative–absolutive alignment, there are two primary ways to mark a canonical subject: the ergative marker **ne** (when the verb is in perfective aspect) or the unmarked nominative (in all other instances).

3.1.1 Ergative

CAUSER is an inanimate instigator or force. Only ergative case marker **ne** really applies this supersense, since the kinds of entities that act as **CAUSERS** are generally not subject to obligation, necessity, or any other modal framings that cause differential subject marking in Hindi.

- (60) āg **ne** ghar ko naṣṭ kiyā. (**CAUSER**)
fire ERG house ACC destroyed do.PFV
‘The fire destroyed the home.’

AGENT is the animate (or construed as such) performer of an action. The **AGENT** argument to a verb can be expressed with a variety of case markers depending on how the scene is to be framed.

- (61) us**ne** kapre dhoye.
3SG.ERG clothes.PL wash.PFV
‘(S)he washed clothes.’

- (62) a. mair̄ne usko bahut mārā.
 1 SG.ERG 3 SG.ACC much hit.PFV
 'I hit him a lot.'
- b. mair̄ne usko bahut thappaṛ māre.

Verbs involving producing or creation of something (*banānā* 'to make'), communication (*batānā* 'to tell', *kahnā* 'to say'), and the giving of a possession (*denā* 'to give') take the role **ORIGINATOR**~**AGENT** for their ergative argument.

Verbs that involve a volitional experience (*dekhnā* 'to see', *mahsūs karnā* 'to feel') take the ergative. Note that these often have dative equivalent that take **EXPERIENCER**~**RECIPIENT** as their proto-Agents, e.g. *dikhāi denā* 'to see'.

Verbs in which the ergative subject ends up with possession of an item (*lenā* 'to take', *xarīdnā* 'to buy') take this role.

- (63) **ORIGINATOR**~**AGENT**:
- a. mair̄ne patra likhā.
 1 SG.ERG letter write.PFV
 'I wrote a letter.'
- b. kisne sansār ko_{THEME} banāyā?
- c. mair̄ne āpko_{RECIPIENT} tohfā diyā.
- (64) **EXPERIENCER**~**AGENT**:
- a. hamne khelte hue bacchoṁ ko dekhā.
 1 PL.ERG play.HAB COP.PFV children.OBL ACC see.PFV
 'We saw children playing.'
- b. mair̄ne dhyān se_{MANNER} sunā.
- (65) **RECIPIENT**~**AGENT**:
- a. Rām ne mujhse_{ORIGINATOR}~_{SOURCE} kitāb le lī.
 Ram ERG 1 SG.ABL book take take.PFV
 'Ram took the book from me.'
- (66) **SOCIALREL**~**AGENT**:
- a. mair̄ne tumse śādī karnī hai.

Bodily emission verbs. There is a set of ‘bodily emission’ verbs (de Hoop and Narasimhan, 2005), such as *chīrṅknā* ‘to sneeze’, *khāṁsnā* ‘to cough’, *mūtnā* ‘to urinate’, that can optionally take the ergative marker (sometimes with light verb constructions) for their subject. The presence of the marker indicates greater agency, so we treat it as AGENT (the lack of the marker would make it a THEME). Note that this alternation is not permissible for every speaker.⁹

- (67) a. usne_{AGENT} chīṁkā
 3SG.OBL.ERG sneeze.PFV
 ‘He sneezed [on purpose].’
 b. vo_{THEME} chīṁkā
 3SG sneeze.PFV
 ‘He sneezed [involuntarily].’

Non-agentive ergatives. There is also a set of verbs that obligatorily take the ergative (as well as the usual modal alternations) even when forming inherently non-agentive compound verbs. Noun-verb concatenations with *khānā* ‘to eat’ behave this way, apparently with a figurative extension of ‘eat’ to ‘receive’ or ‘bear’.

- (68) maimne usse_{ORIGINATOR~>SOURCE} mār khāyī.
 1SG.ERG 3SG.OBL.ABL beating eat.PFV
 I took a beating from him.

Since we annotate source domain of metaphors, the subject should be annotated RECIPIENT~>AGENT here.¹⁰

Discussion. In the differentially-marked subjects for obligation, necessity, and ability, the AGENTS do not have volition, so that scene role for them is uncertain. This is part of the broader problem of SNACS’s treatment of force dynamics cross-lingually, and will not be easily resolved with the current hierarchy.

⁹This specific example doesn’t work for Aryaman, but e.g. *cīkhnā* ‘to yell’ does.

¹⁰This is an open issue, #1.

3.2 Case marker: **ko**

Like in most Indo-Aryan languages, **ko** is a dative–accusative marker. Both senses seem to constitute a single entry in the lexicon; the difference between a dative **ko** and an accusative **ko** is not readily known to a non-linguistically-informed native speaker.

Syntactic tests for ascertaining function. The dative **ko** is obligatory while the accusative **ko** marks animacy, definiteness, and/or salience. Thus, one can use an indefinite (e.g. a plural) and/or inanimate substitution to test if the **ko** can be dropped; if it can be, then it is an accusative.

- (69) Accusative:
- a. [mez **ko**]_{THEME} sāf karo.
 - b. [bīs mez]_{THEME} sāf karo.
- (70) Dative (dropping **ko** changes the role):
- a. us**ko**_{RECIPIENT} dikhāo.
 - b. vah_{STIMULUS~THEME} dikhāo.

See also [Bhatt et al. \(2013, 72–76\)](#).

3.2.1 Accusative (and **kā**, **par**)

The various accusative markers are all annotated **THEME**. A **THEME** undergoes an action, nonagentive motion, a change of state, or transfer. It is a broad category, best signified by the differentially marked (generally on animate or specific objects) accusative **ko**. Some compound verbs favour **kā** or **par** as their object markers.

The pronouns have special accusative forms suffixed with *-e(m)* (*mujhe*, *tujhe*, *hamerī*, *use*, etc.), which are all treated the same as **ko**.

- (71) a. mez **ko** sāf karo.
table ACC clean do.IMP
'Clean the table.'
- b. mez **kī** safāi karo.
table GEN cleaning do.IMP
'Do the cleaning of the table.'
- (72) usne bacce **ko** sulāyā.
3SG.ERG child.OBL ACC sleep.CAUS.PFV
'(S)he made the child sleep.'

(73) arjun ne mahābhārat meṃ kaṛṇ **ko** parājit kiyā.

(74) usne kitāb **ko** becā.
3SG.ERG book ACC sell.PFV
'(S)he sold the book.'

(75) mairṇne **use** ḍākghar bhejā.

(76) uskī piṭāī

Some verbs use **par**.

(77) hamne tum **par** hamlā kiyā.
1PL.ERG 2PL on attack do.PFV
'We attacked you.'

(78) mairṇne is deś **par** rāj kiyā.

Other examples of **ko** marking verbal arguments are below. **STIMULUS**→**THEME** marks the source of a volitional experience, such as *dekhnā* 'to see', *sunnā* 'to hear'. Some verbs (*samajhnā* 'to understand', *mānnā* 'to accept', etc.) license a **TOPIC**→**THEME** for their objects (#3). This includes the adjective–verb compound use of *samajhnā*.

(79) **STIMULUS**→**THEME**:

a. mairṇ baccorṇ **ko** dekh rahā thā.
1SG child.PL.OBL ACC see CONT COP.PST
'I was watching a movie.'

(80) **TOPIC**→**THEME**:

a. jīvan **ko** samajhnā muśkil hai.
life ACC understand.INF difficult be.PRS
'Understanding life is difficult.'

b. kyā tum mujhe ullū samajhte ho?
what 2PL 1SG.ACC owl understand.HAB COP.PRS
'Do you think I'm stupid?'

(81) **POSSESSION**→**THEME**:

a. is gande kele **ko** nahīm xarīdūmgā!

Spray-load alternation. Like English (and many other languages), Hindi exhibits a *spray-load alternation* that allows **ko** to take the construal **GOAL**→**THEME**.¹¹

- (82) a. *gilās ko pāni se*_{THEME→INSTRUMENT} *bharo.* (**GOAL**→**THEME**)
 glass ACC water INS fill.IMP
 ‘Fill the glass with water.’
- b. *gilās meṁ*_{GOAL→LOCUS} *pāni bharo.*
 glass ACC water INS fill.IMP
 ‘Fill the water in the glass.’
- c. *pāni ko gilās meṁ*_{GOAL→LOCUS} *bharo.* (**THEME**)
 water ACC glass LOC fill.IMP
 ‘Fill the water in the glass.’

Discussion. **THEME**-type markers are often used to mark the object of a verb (such as a causative) with force-dynamic properties.

- (83) *aurat ne bacce ko sulāyā.*
 woman ERG child.OBL ACC sleep.CAUS.PFV.
 ‘The woman made the child sleep.’

THEME is perhaps not the best label for this, but since there is no special handling of force dynamics, this is the best option in the current hierarchy.

3.2.2 Dative

The function for this case is **RECIPIENT**. The canonical example of the dative is an indirect object to which the direct object (**THEME**) is transferred by the subject (**ORIGINATOR**).¹²

- (84) *mairṁne apne dost ko kitāb dī.*
 1 SG.ERG REFL.GEN friend DAT book give.PFV
 ‘I gave my friend the book.’
- (85) *mujhe ek bāt batāo.*
 1 SG.DAT one talk tell.IMP
 ‘Tell me one thing.’

¹¹This [informal Twitter poll](#) ($n = 45$) finds that 29% of respondents think the alternation means different things, with the form marking the container with the accusative implying ‘filling to the top’. The form marking the liquid with the accusative is greatly preferred (62%).

¹²In Universal Dependencies (Nivre et al., 2020), the **RECIPIENT** is the argument to the verb that has an *iobj* relation.

- (86) Suṣmitā **ko** kitne pāṭh paṛhāoge?
 Sushmita DAT how.many lessons teach.FUT
 ‘How many lessons will you teach to Sushmita?’
- (87) tum**ko** ek ciz dikhānā cāhtā hūm. (EXPERIENCER~>RECIPIENT)

Dative subject. The dative subject (sometimes narrowly called the experiencer subject) is a common construction with some verbs in Hindi. Besides EXPERIENCERS, it also marks some idiosyncratic verbs.

- (88) EXPERIENCER~>RECIPIENT:
- Sunītā **ko** buxār hai.
 Sunita DAT fever COP.PRS
 ‘Sunita has a fever.’
 - muj**ko** Hindī nahīm ātī.
 I SG.DAT Hindi NEG come.HAB
 ‘I don’t know Hindi.’
 - rājā **ko** duḥkh huā.
 - muj**ko** tum pasand ho.
 - ek ām **ko** dūsre ām se^{STIMULUS~>ANCILLARY} pyār huā.
 - us**ko** acānak se^{MANNER} āvāz sunāī dī.
 - muj**he** dūsarī kitāb cāhiye.
 - Amerikā **ko** koī aitrāz nahīm hai.
- (89) BENEFICIARY~>RECIPIENT:
- muj**he** koī fāyḍā nahīm huā.
 I SG.DAT any benefit NEG COP.PFV
 ‘I got no benefit.’
 - kampanī **ko** munāfā hogā.
 - māṅg **ko** Kāṅgres kā samarthan hai.
- (90) GESTALT~>RECIPIENT:
- ām ādmī **ko** haq hai.
 common man DAT right COP.PRS.
 ‘The common man has the right.’
 - muj**ko** bahut kām hai.
- (91) SOCIALREL~>RECIPIENT:

- a. Rām **ko** do beṭiyāñ huī.
 Ram DAT two daughter.PL be.PFV.
 ‘Two daughters were born to Ram.’

Modal subject. In conjunction with some modal light verbs, the dative case marker **ko** marks the **AGENT**. These, however, have force dynamic issues.

- (92) usko pānī pīnā cāhiye. (**AGENT**→**RECIPIENT**)
 3SG.OBL.DAT water drink.INF should
 ‘He should drink water.’
- (93) rām **ko** kitāb band karnī paṛī. (**AGENT**→**RECIPIENT**)
 Ram DAT book close do.INF be.obliged.PFV
 ‘Ram had to close the book.’

3.3 **TOPIC: ke_bāre_mem, etc.**

TOPIC primarily refers to information content (especially in cognition event) or communication. The prototypical adposition for this is **ke_bāre_mem**, but the locative markers **mem**, **par** and genitive **kā** mark **TOPICS** as well.

- (94) tumhāre_bāre_mem bāt kar rahe the.
 2PL.about talk do CONT COP.PST
 ‘We were talking about you.’
- (95) uskī tasvīr dikhāo.
 3SG.GEN picture show.IMP
 ‘Show the picture of him.’
- (96) terā kyā hogā?
 2SG.GEN what COP.FUT?
 ‘What will become of you?’
- (97) is bāt **par** carcā huī.

3.4 **Case marker: se**

3.4.1 **Instrumental (and ke_zariye etc.)**

The instrumental case (INS) of **se** takes the function **INSTRUMENT**.

- (98) mairñne cāqū **se** sabzī ko kātā.
 1SG.ERG knife INS vegetable ACC cut.PFV
 ‘I cut the vegetables with a knife.’

- (99) gārī **se** ghar jāūṅgā.
 car INS home go.FUT
 ‘I’ll go home by car.’
- (100) tohfe ko ḍāk **se** bhejo.
- (101) us rāste **se** jāo. (PATH~>INSTRUMENT)
- (102) gilās ko pāni **se** bharo. (THEME~>INSTRUMENT, from (82a))

The postpositions **ke_zariye** ‘via, through’ and **ke_mādhyam_se** ‘by means of’ (in Sanskritised Hindi) also mark INSTRUMENTS.

- (103) Gūgal **ke_zariye** khoj lo.
- (104) Hindī bhāṣā **ke_mādhyam_se** ham logorū tak pahūnc sakte hairū.

Animate instruments. Indirect causative verbs in Hindi (e.g. *khulvānā* ‘to make X open Y’) can take an animate instrument which exhibits AGENT-like properties (Ramchand, 2011). Currently we annotate these as their predicate-licensed scene role construed as INSTRUMENT.

- (105) mairūne bāi **se** bacce ko sulvāyā.
 1SG.ERG maid INS child.OBL ACC sleep.CAUS2.PFV
 (AGENT~>INSTRUMENT)

‘I made the maid put the child to sleep.’

- (106) tumne mujh**se** khānā banvāyā (ORIGINATOR~>INSTRUMENT)

Discussion. One possible change to this is to create a new function for animate instruments: AIDER. Animate instruments can control adverbial phrases while inanimate instruments cannot, animate instruments can control instruments of their own, and a similar distinction already exists between inanimate CAUSER and animate AGENT in the hierarchy (Bhatia, 2016; Begum and Sharma, 2010), thus it seems strange to say these are still morphosyntactic INSTRUMENTS.

An alternative is to treat this as an AGENT and make a new supersense for the initiator of the action (which is a volition entity but not an actor itself). This approach is taken by Bill Croft.^a

^aPersonal communication.

3.4.2 Ablative

The ablative sense of **se** (ABL) takes the function **SOURCE**. (For the literal meaning of motion away, see that section.)

Some of the literal ablative uses to mark verbal arguments get the scene role **THEME**; refer to the English guidelines (Schneider et al., 2020) for more on this.

- (107) adhyāpak ne laṛkoṁ ko_{THEME} laṛkiyoṁ **se** alag kiyā.
teacher ERG boy.PL.OBL ACC girl.PL.OBL ABL separate do.PFV
(**THEME**→**SOURCE**)

‘The teacher separated the boys from the girls.’

Here are some of the more grammaticalised uses of ablative **se** to mark verbal arguments, classified as such based on typological considerations given in (Khan, 2009). The counter-intuitive **RECIPIENT**→**SOURCE** frames the **RECIPIENT** of a ‘request’-type verb as the **SOURCE** of a response.

- (108) **STIMULUS**→**SOURCE**:
- tum**se** ḍar lagtā hai.
2PL.ABL fear feel.HAB COP.PRS
‘I feel scared of you.’
 - tumhāre bartāv **se** mair̄ṁ ḡussā hūṁ.
 - mair̄ṁne āp**se** ummīd rakhī.
 - pyār huā, iqrār huā hai, pyār **se** phir kyom̄ ḍartā hai dil?
- (109) **RECIPIENT**→**SOURCE**:
- mair̄ṁ āp**se** bhīk māṁgtā hūṁ.
1SG 2PL.ABL alms ask.for.HAB COP.PRS
‘I beg of you.’
 - usne mujh**se** praśn pūchā.
- (110) **ORIGINATOR**→**SOURCE**:
- kyā tumher̄ṁ us**se** kuch milā?
what 2PL.DAT 3SG.ABL anything receive.PFV
‘Did you get anything from them?’
 - dost **se** patā calā.¹³

- (111) **CAUSER**→**SOURCE**:

¹³But note that an inanimate provider of information (like a book) is just **SOURCE**. See issue #20.

- a. vah zukām **se** pīrit hai.
 3SG cold ABL suffering COP.PRS
 ‘He is suffering from the cold.’

3.4.3 Comitative (and **ke_sāth**, **ke_binā**)

The comitative sense of **se** (COM) takes the function **ANCILLARY** and usually a non-matching scene role falling under **PARTICIPANT**. Verbs, pertaining to social relations (*śādī karnā*) and emotional stimuli (*pyār/nafrat karnā*), as well as more literal verbs involving association or joining, license the comitative **se** for the secondary participant:

- (112) vah tum**se** pyār kartī hai. (**STIMULUS**→**ANCILLARY**)
 3SG 2PL.COM love do.HAB COP.PRS
 ‘She loves you.’
- (113) ham un**se** ṭakrāye. (**THEME**→**ANCILLARY**)
 1PL 3PL.COM collide.PFV
 ‘We collided with them.’
- (114) kyā tum mujh**se** śādī karogī begam? (**SOCIALREL**→**ANCILLARY**)

Just like English has a distinction between accompaniers (*together with*) and secondary participants in a scene (*with*), Hindi distinguishes **ke_sāth** and the comitative sense of **se**. For example:

- (115) a. maiṁ tum**se** laṛūṅgā. (**AGENT**→**ANCILLARY**)
 1SG 2PL.COM fight.FUT
 ‘I will fight you.’
- b. maiṁ tum**hāre_sāth** laṛūṅgā. (**ANCILLARY**)
 1SG 2PL.with fight.FUT
 ‘I will fight with you.’

Behaviour. The postposition **ke_sāth** can be used with certain predicates to indicate the target of behaviour. Following the main guidelines, we label this **BENEFICIARY**→**ANCILLARY** (see #9).

- (116) tumne **mere_sāth** burā bartāv kiyā.
 2PL.ERG 1SG.with bad behaviour do.PFV
 ‘You behaved poorly with me.’

Discussion. There are some cases where **ke_sāth** and **se** are interchangeable, probably given the relatively recent grammaticalisation of **ke_sāth** as a comitative. One instance is the second argument to *khelnā* ‘to play’, which can take either case if the argument is inanimate:

- (117) a. mair̄ gur̄iyā **se** khel rahā hūm̄.
 b. mair̄ gur̄iyā **ke_sāth** khel rahā hūm̄.
 1SG doll with play CONT COP.PRS
 ‘I am playing with a doll.’
- (118) a. *mair̄ dost **se** khel rahā hūm̄.
 b. mair̄ dost **ke_sāth** khel rahā hūm̄.
 1SG friend with play CONT COP.PRS
 ‘I am playing with a friend.’

Only **ke_sāth** is grammatical for an animate.^a For an inanimate participant, arguably the scene role **AGENT** is impossible (and there is no personification at play), so we label **ke_sāth** as **ANCILLARY** and **se** as **INSTRUMENT**.

^aBased on native speaker judgement. See [this Twitter poll](#): $n = 48$, **ke_sāth** is preferred by 92% for an animate, but only 52% for an inanimate.

3.4.4 Passive subject (and **dvārā**)

A verb in a passive construction (with the light verb *jānā* ‘to go’) marks the **AGENT** (with appropriate predicate-licensed scene role) with the instrumental case marker **se**. This can also be a debilitating construction when negated.

The postposition **dvārā** also marks a passive subject in some dialects and literary Hindi.

- (119) bacce **se** śīsā ṭuṭ gayā. (**AGENT**)
 child.OBL INS mirror break go.PFV
 ‘The mirror was broken by the child.’
- (120) Rām **dvārā** likhit (**AGENT**)
 Ram by written
 ‘written by Ram’
- (121) mujh**se** nā kiyā jāyegā. (**AGENT**)
 ho pāyegā

Discussion. Given that the passive is thoroughly grammaticalised into Hindi, it is not apparent which canonical case it belongs under. The most likely candidates are the ablative (**SOURCE**) or the instrumental (**INSTRUMENT**); compare the Sanskrit

instrumental and genitive being used in a similar way with participles historically. Given these facts, we elected to make **AGENT** a valid function for **se**.

3.5 Case marker: **kā**

The main use of **kā** to mark a **PARTICIPANT** is in nominalisations of verb phrases, in which it marks arguments to the verb.

- (122) Sacin Tendulkar **kā** 200 ran **kā**_{IDENTITY} rikarḍ (**AGENT**→**GESTALT**)
 Sachin Tendulkar GEN 200 run GEN record
 ‘Sachin Tendulkar’s 200 run record’
- (123) **tumhārā** usko_{THEME} mārṇā (**AGENT**→**GESTALT**)
- (124) **merī** samajh merī āyā (**EXPERIENCER**→**GESTALT**)
 1SG.GEN understanding LOC come.PFV
 ‘I understood.’
- (125) **tumhārā** yah likhnā ṭhīk nahīrṁ thā. (**ORIGINATOR**→**GESTALT**)
 2PL.GEN 3SG write.INF proper NEG COP.PST
 ‘You writing this was not okay.’
- (126) Sītā **kī** hāmī (**ORIGINATOR**→**GESTALT**)
 Sita GEN assent
 ‘Sita’s assent.’

3.6 Postposition: **ke_liye**

ke_liye when marking something animate it indicates a **BENEFICIARY**.

- (127) mairṁne **tumhāre_liye** kiyā.
 1SG.ERG 2PL.for do.PFV
 ‘I did it for you.’

It is similar to English *for*; it can also indicate purposes (see **PURPOSE**), sufficiency/excess comparisons (see **COMPARISONREF**), and costs.

- (128) **iske_liye** do rupaye lageṅge. (**COST**)
 3SG.for two rupee.PL apply.FUT
 ‘This will cost two rupees.’

It is also used in a manner similar to the English *from the perspective of*, where it licenses **EXPERIENCER**→**BENEFICIARY**.

- (129) **mere_liye** bahut āsān kām hai. (**EXPERIENCER**→**BENEFICIARY**)

3.7 Postposition: ke_xilāf, ke_viruddh

The postpositions **ke_xilāf** and **ke_viruddh** (in Sanskritised Hindi) indicates a maleficiary, which is classified as a type of **BENEFICIARY** in SNACS. They are similar to English *against*.

(130) paramparā **ke_viruddh**

(131) kis deś **ke_xilāf** yuddh hogi? (**AGENT**~**BENEFICIARY**)
which country against war be.FUT
'Against which country will the war be fought?'

(132) faisle **ke_xilāf** honā (**CHARACTERISTIC**~**BENEFICIARY**)

3.8 Postposition: ke_binā

When marking an animate NP and as an adjunct to a verb, **ke_binā** 'without' is labelled **ANCILLARY** (i.e. it is the negation of **ke_sāth**). It also has a unique syntactic variant that is circumpositional: **binā_ _ke**, which is generally utilised with inanimates. See #23 for some corpus examples.

(133) kyā tum **mere_binā** dukān jā sakte ho?
what 2PL 1SG.without store go be.able.HAB COP.PRS
'Can you go to the store without me?'

For inanimates, it is labelled **POSSESSION**~**ANCILLARY**. To check for this, you may test if the opposite meaning with the conjunctive verb *lekar* is valid (e.g. *āp vīzā lekar...*).

(134) āp **binā_ vīzā_ ke** nahīn jā sakte.
2PL without vise GEN NEG go be.able.HAB
'You cannot go without a visa.'

When the object is an action (whether nominal or verbal), then **ke_binā** could be labelled either **CIRCUMSTANCE** or **MANNER**. If it can answer a *kaise?* question then it is the latter.

(135) tum **binā** batāye cal gaye? (**CIRCUMSTANCE**)
2PL without tell.PFV walk go.PFV
'You left without telling?'

(136) **binā_ kisī kī madad_ ke** (**MANNER**)

(137) **binā_ ghaṭnā_ ke** (**MANNER**)

4 CONFIGURATION

4.1 IDENTITY

kā (GEN) can be used to categorise or equate, thus being labelled **IDENTITY**.

(138) use maut **kī** sazā milegī.
3SG.DAT death GEN punishment receive.FUT
'(S)he will be sentenced to death.'

(139) cār sāl **kī** umr

(140) ānand telefon ōpreṭar **kā** kām kartā hai.
Anand telephone operator GEN work do.HAB COP.PRS
'Anand works as a telephone operator.'

ke_rūp_merṁ, analogous to the English construction *as*, takes an object (core argument) of a predicate and categorises it with a label that bears the postposition.

(141) Yuvaraj acchī krikeṭar **ke_rūp_merṁ** pari-pakvā ho cuke hai.
Yuvaraj good cricketer as mature complete.PFV COP.PRS
'Yuvaraj has matured as a good cricketer.'

(142) 14 sitambar kā din 'hindi-divas' **ke_rūp_merṁ** manāyā jātā hai.

4.2 SPECIES

SPECIES is rare in Hindi. The main instance of this is when the governor of the **kā**-marked NP is a word like *misāl* or *udāhraṇ* 'example'.

(143) Bhārātīy kalā **kā** udāhraṇ
Indian art GEN example
'an example of Indian art'

Confusion with CHARACTERISTIC. Semantically, the usual translation equivalent of English *type of X* into Hindi is *tarah kā X*. Note, however, that the head of this NP is opposite in Hindi: it is *X* rather than *type*. That construction with **kā** is labelled **CHARACTERISTIC**.

(a) A representation of English *that kind of friend* in \bar{X} theory.

(b) A representation of Hindi *us tarah kā dost* per Bhatt et al. (2013).

4.3 GESTALT

GESTALT is the prototypical function of **kā**, and the genitive forms of pronouns (e.g. *merā* '1 SG.GEN'). Note that the genitives are declined for the gender of their governor.

- (144) **merā** nām Rām hai.
 1 SG.GEN name Ram COP.PRS
 'My name is Ram.'
- (145) ām **kā** dām
- (146) kām karne **kā** nayā tariqā
- (147) ve TV ke_sāth **apnā** samay bitāte hain
 3PL TV with REFL.GEN time spend.HAB COP.PRS
 'They spend their time with the TV.'
- (148) dūdh **kī** miṭhās acchī hai
 milk GEN sweetness good COP.PRS
 'The milk is sweet.' [lit. 'The milk's sweetness is good.']

For **GESTALT**, possession is typically complex or abstract, and usually not alienable (otherwise **POSSessor** is used).

As a function, it is also used for nominalisations of verb phrases.

Possessive ke_pās. Like in many Indo-Aryan languages, the postposition for ‘near’ (**ke_pās**) has come to have a possessive sense. This is labelled **GESTALT**→**LOCUS** (or with a subtype scene role). It was elected not to give the function **GESTALT** to this since it often implies physical on-person possession when contrasted with the genitive **kā**.

- (149) paṛhai ke kāraṅ uske_pās samay nahin hai (GESTALT→LOCUS)
 studies CAUS 3SG.LOC time NEG COP.SG
 ‘He has no time on account of (his) studies.’

Locative subject alternation. The locative case marker **meṁ**, when applied to a subject of a verb, can indicate a **GESTALT**→**LOCUS**, the possessor of a property (Kachru, 1970).

- (150) a. laṛke kā sāhas (GESTALT)
 boy.OBL GEN courage
 ‘the courage of the boy’
 b. laṛke meṁ sāhas hai (GESTALT→LOCUS)
 boy.OBL LOC courage COP.PRS
 ‘The boy is courageous.’
- (151) merīAGENT→GESTALT harkatoṁ meṁ pyār hai. (GESTALT→LOCUS)
- (152) mere_pās māṁ hai. (SOCIALREL→LOCUS)

4.3.1 POSSESSOR

The **POSSESSOR** label is again associated with genitive **kā**. This is only for alienable possessions of property (generally physical item, but also less tangible property like data or Bitcoins).

Like in English, this includes possessions implying but not explicitly stating previous transfer events.

- (153) yah kiskā paisā hai
 3SG who.GEN money COP.PRS
 ‘Whose money is this?’
- (154) kal tumhārī chitṭhī āyī thī
 yesterday you.OBL.GEN.SG letter come.PERF.PST COP.PST
 ‘Your letter had arrived yesterday.’
- (155) laṛke ke_pās paisa nahīṁ hai. (POSSESSOR→LOCUS)
 boy.OBL near money NEG COP.PRS
 ‘The boy does not have money.’

(156) **merā** dīngā ām bahut acchā hai.

4.3.2 **WHOLE**

WHOLE largely follows the English guidelines (Schneider et al. 2020) in its definitions for Hindi, associated chiefly with the genitive **kā** and the locative **merī** in constructions with the copula (Kachru, 1970).

The possessed entity is well-defined on its own, yet not alienable in the sense of being unable to exist by its own self:

(157) ādmi ghar **ke** chat par baiṭhā hai (WHOLE)
man house GEN roof LOC sit.PFV COP.PRS
‘The man is seated on the roof of the house.’

(158) **merī** āṅkherī (WHOLE)

(159) āṅkh **ke** kone se_{LOCUS→SOURCE} (WHOLE)
eye GEN corner.OBL INS
‘from the corner of my eye’

(160) a. kamre **ke** darvāze (WHOLE)
room.OBL GEN doors
‘the room’s doors’

b. kamre **merī** darvāze haiṅ. (WHOLE→LOCUS)

Sets. Both **merī_se** (lit. ‘LOC ABL’) and **merī** (LOC) are used to denote sets that form a **WHOLE**. **merī_se** is construed as **WHOLE→SOURCE** since it is more literally locative in nature, while **merī** is **WHOLE→LOCUS**.

(161) in donoṅ **merī_se** pehle kaun bolegā? (WHOLE→SOURCE)
3PL.OBL both.OBL LOC.ABL first who speak.FUT
‘Who will speak first out of them both?’

(162) sāre bacchoṅ **merī** sirf tumhāre bāl lāl haiṅ. (WHOLE→LOCUS)
all child.PL.OBL LOC only 2PL.GEN hair red COP.PRS
‘Out of all the kids only you have red hair.’

‘Between’. The **ke_bīc** ‘between, among’ postposition combines two or more entities into one argument to a verb (Schneider et al. 2020):

- (163) laṛāī in donom̄ **ke_bīc** hai (AGENT~>WHOLE)
 fight 3SG.OBL both.OBL between COP.PRS
 ‘(The) fight is between these two.’

4.3.3 **ORG**

ORG is not associated in the capacity of a lexical function with any marker, and is indicated by a variety of postpositions and case markers.

- (164) amerikā ke saṁyukt rājya **ke** rāṣṭrāpati (ORG~>GESTALT)
 America GEN United States GEN President
 ‘the President of the United States of America’
- (165) vah choṭe axbār **meṁ** kām kartā hai (ORG~>LOCUS)
 3SG small newspaper LOC work do.HAB COP.PRS
 ‘He works at a small newspaper.’
- (166) Gūgal **ke_dvāra_se** āpko pradat koī salāh ya jānkārī koī
 Google by 2.DAT provide.PP any advice or information any
 vārantī nahin ut-pann karegī (ORG~>AGENT)
 warranty NEG create.FUT.SG
 ‘Any advice or information provided to you by Google will not create any warranty.’
- (167) Gūgal **ke_sāth** āpkā sambandh ṣṭeṭ āf Kailiforniyā ke qānūn dvāra saṁcālīt
 hogā. (ORG~>ANCILLARY)
- (168) main̄ sarkār **ke_liye** kām kartā hūm̄ (ORG~>BENEFICIARY)

4.3.4 **QUANTITYITEM**

Measure and count words (including numerals, ordinals, ordinal + measure, and numeral + measure word combinations) in Hindi largely modify the noun phrase directly, without an intervening postposition (Koul, 2008). The usual marker for **QUANTITYITEM** is **kā**, but it is uncommon.

- (169) davāom̄ **kī** kamī
 medicine.PL.OBL GEN lack
 ‘a lack of medicines’

- (170) ām **kā** ek kilo
 mango GEN one kilogram
 ‘one kilogram of mangoes’
- (171) seb **kā** ādhā (QUANTITYITEM~>WHOLE)
 apple GEN half
 ‘one-half of the apple’

Collective nouns. The treatment of collective noun governors and their governees, follows that of Schneider et al. (2020) and is labeled QUANTITYITEM~>STUFF:

- (172) tāṛ ke vīḱsom̄ **kā** jhūṇḍ
 palm GEN tree.PL GEN grove
 ‘a grove of palm trees’
- (173) pilāzā par logom̄ **kī** bhīṛ ikaṭṭhī huī thī
 plaza LOC person.PL.OBL GEN crowd assembled COP.PFV COP.PST
 ‘A crowd of people had assembled at the plaza.’

4.4 CHARACTERISTIC

CHARACTERISTIC is expressed through **kā** and **vālā**. The difference between the two is the **vālā** tends to emphasise that its object is only one property (of many) of the governor. While **vālā** is not a standard postposition, it mediates between nouns and noun-phrases, assigning one as a CHARACTERISTIC of the other.

- (174) us tarah **kā** kām
 3SG.OBL type GEN work
 ‘that kind of work’
- (175) ājkal **kī** duniyā meṁ log aise hote hain
 today GEN world LOC people COMP.PL exist.HAB.PL COP.PL
 (TIME~>CHARACTERISTIC)
 ‘People are like that in today’s world.’
- (176) a. Jāpān duniyā ke tīsrā sabse baṛā tel khapat **vālā** deś
 Japan world GEN third largest oil consumption ADJ country
 hai
 COP.SG
 ‘Japan is the third largest oil-consuming country of the world.’

- b. nīlā **vālā** ghar
blue ADJ house
'a house that is blue'
- c. do sāl kī_{IDENTITY} umr **vālā** kuttā
- d. ūpar **vālā** kamrā (LOCUS~>CHARACTERISTIC)
- e. pīne **vālā** sāf pāni (PURPOSE~>CHARACTERISTIC)
- (177) rāy **meṁ** fark
opinion LOC difference
'a difference in opinion'
- (178) umr hogī gyārah sāl lekin lambāi **meṁ** zyādā baṛā lagtā hai.
- (179) khilārī vazan **ke_hisāb_se** cune gaye.

Containers. Like in English, CHARACTERISTIC construed as STUFF described containers that are filled with something.

- (180) pānī kī botal 20 rūpye kī hai. (CHARACTERISTIC~>STUFF)
water GEN bottle 20 rupees GEN COP.SG
'The bottle of water costs 20 rupees.'
- (181) tumhāre gahne aur kapṛom **kā** baksā (CHARACTERISTIC~>STUFF)

Examining for an attribute. **ke_liye** is used in transitive verb contexts where the attribute of the THEME is being examined.

- (182) bacce ne rākṣasom **ke_liye** kamre kī_{THEME} jāmc kī.
child.OBL ERG demon.PL.OBL for room GEN checking do.PFV
'The child checked the room for monsters.'

States. The state or condition that an entity is in is CHARACTERISTIC~>LOCUS.

- (183) kitāb Pañjābī **meṁ** hai.
book Punjabi LOC COP.PRS
'The book is in Punjabi.'
- (184) vah kis hālat **meṁ** hai?
- (185) acambhe **meṁ**
- (186) trikoṅ **ke_rūp_meṁ**

4.4.1 POSSESSION

The genitive **kā** and adjectival **vālā** indicate a **POSSESSION** when its object is the item being possessed and the governor is a possessor (i.e. the reverse of the genitive **POSSESSOR**).

(187) vah ghar **kā** mālik hai.
3SG house GEN owner COP.PRS
'He is the owner of the house.'

(188) vah kāfī paise **vālā** thā. (**POSSESSION**~>**CHARACTERISTIC**)
3SG quite money ADJ COP.PST
'He was quite rich.'

(189) binā paise **kā** ādmī
without money GEN man
'a man without money'

Verbal arguments. The morphosyntactic **THEME** argument to a verb (marked with an accusative-type postposition or **ko**) dealing with change of possession or transfer of goods and services is labelled **POSSESSION**~>**THEME**.

(190) unhone pākṣāstrā kī kitāboṃ **par** khūb xarc kiyā hai
3PL.ERG cooking GEN book.PL.OBL LOC lot spend do.PFV COP.PRS
'He has spent a lot on cookbooks.'

(191) main us khilaune **ko** xarīdnā cāhtā hūm!

4.4.2 PARTPORTION

(192) naī injan **vālī** gārī (**PARTPORTION**~>**CHARACTERISTIC**)
new engine ADJ car
'a car with a new engine'

(193) do darvāzoṃ **vālā** kamrā (**PARTPORTION**~>**CHARACTERISTIC**)
two door.PL.OBL ADJ room
'a room with two doors'

binā* and *kā/vālā*.** As a postposition, ***ke_binā can mark an NP as **PARTPORTION**, indicating an obl argument to a verb.

(194) masālā ***ke_binā*** pūrī-masālā kyā hai?
 spices without puri-spices what COP.SG
 ‘What is puri-spices without the spices?’

(195) rāhul drāvid ***ke_binā*** kyā hotā hai bhāratīya ballebāzī kā hāl?
 Rahul Dravid without what be.PRS COP.SG indian batting GEN state
 ‘What is the state of Indian batting without Rahul Dravid?’

As a noun modifier, *binā* is often coordinated with the postpositions ***kā*** or ***vālā***. In these cases, we do not label *binā*, but we label the coordinating postposition **PARTPORTION**. The reasoning is that when ***binā*** is dropped, the coordinating postpositions still provide the same semantics (e.g. *cīnī vālī cāy* ‘tea with sugar’).

(196) binā cīnī ***vālī***_{PARTPORTION~CHARACTERISTIC} cāy
 without sugar ADJ tea
 ‘tea without sugar’

(197) binā cīnī ***kā***_{PARTPORTION} dūdh

Sets. Non-members and members of a set can be marked **PARTPORTION** by ***ke_alāvā*** ‘besides, other than’ and ***ke_atirikt*** (‘in addition to’).

(198) śahr ***ke_alāvā*** gāvom̄ meṁ bhī gas kanekśan baḥh rahe
 city other.than village.PL.OBL LOC too gas connection increase CONT
 hai
 COP.PRS

‘Other than in the city, gas installations are increasing in the villages too.’

(199) Smith aur Kailis ***ke_alāvā***

(200) Latā Mangeśkar, Āśā Bhosle to niyamit āvāze thīm hī, ***inke_atirikt*** He-
 mant Kumār, Talat Mahmūd bhī

jaisā ‘such as’ can also mark set members.

(201) Dīwālī aur Holī ***jaise*** bhāratīya tyauhār manātīm hair̄m
 diwali and holi like indian festival celebrate.HAB COP.PRS
 ‘They celebrate Indian festivals like diwali and holi.’

(202) hōkī, fuṭbōl, aur krikeṭ ***jaise*** pāramparik khel

STUFF **STUFF** is marked by the genitive **kā**, and it is not different from how the English guidelines treat it.

- (203) sone **kī** thālī (**STUFF**)
gold.OBL GEN platter
'a platter made of gold'
- (204) bīyar **kī** botal (**CHARACTERISTIC**→**STUFF**)
beer GEN bottle
'bottle of beer'
- (205) vṛkṣoṃ **kā** jhund (**QUANTITYITEM**→**STUFF**)
- (206) logoṃ **kī** bhīṛ (**QUANTITYITEM**→**STUFF**)
- (207) chātroṃ **kī** kākṣā (**ORGMEMBER**→**STUFF**)
- (208) cricket vāloṃ **kī** tīm (**ORGMEMBER**→**STUFF**)

4.4.3 **ORGMEMBER**

ORGMEMBER is largely marked by the the genitive **kā**.

- (209) mere beṭe **kā** parivār (**ORGMEMBER**→**GESTALT**)
1SG.GEN child.OBL GEN family
'My child's family.'
- (210) coroṃ **kī** dhār (**ORGMEMBER**→**STUFF**)
thief.PL.OBL GEN gang
'gang of thieves'
- (211) **merī** kampanī (**ORGMEMBER**→**POSSESSOR**)
1SG.GEN company
'My company.'

4.4.4 **QUANTITYVALUE**

QUANTITYVALUE is uncommon, but is indicated by genitive **kā**.

- (212) ek kilo **kā** ām
one kilogram GEN mango
'a one-kilogram mango'

APPROXIMATOR **APPROXIMATOR** is indicated by a number of targets, all dealing with scalar comparisons.

(213) **lagbhag** ‘around, approximately’:

- a. unkī kampanī Dillī ke **lagbhag** ek karor garībom tak
3SG.GEN company Delhi GEN around one crore pauper.PL.OBL to
bijlī pahunchātī hai
electricity deliver.PRS COP.SG
‘His company provides electricity to around 10 million of Delhi’s poor’
- b. gāv ke **lagbhag** chār sau log

(214) **qarīb** ‘nearly, almost’:

- a. Eyar Inḍiyā ke **qarīb** ādhe pāyḷaṭom kī haṭtāl
Air India GEN nearly half pilot.PL.OBL GEN strike
‘the strike of nearly half of Air India’s pilots’
- b. uṛān bharne ke **qarīb** 20 minat bād

(215) **ke_adhik / se_adhik, se_zyādā** ‘over, greater than’:

- a. 70 fīsadī **ke_adhik**
70 percent greater.than
‘greater than 70 percent’
- b. jodhpūr ke 1200 **se_adhik** dāktar haṭtal par the
jodhpur GEN 1200 more than doctor strike LOC COP.PST
‘More than 1200 doctors from Jodhpur were on strike’
- c. Inglaīnd ne vah ṭeṣṭ 300 **ke_adhik** antar se jītā

(216) **ke_bīc** ‘between’:

- a. ummīd hai ki hum pānc se chaḷ hazār **ke_bīc** nayī
hope COP.SG COMP 3.PL five COM six thousand between new
logom kī bhartī kareṅge
person.PL GEN recruit do.PL.FUT
‘The hope is that we will recruit between five to six thousand new recruits’

(217) **ke_āspās** ‘close to, near’:

- a. dālar ke mukābale rūpyā 52 rūpye **ke_āspās** pahunchā
dollar compared to rupee 52 rupees close to reach.PFV
‘The Rupee reached close to 52 rupees (compared) to the Dollar’
- b. gyārah baje **ke_āspās** vah dillī pahunchī
eleven time close to 3.SG Delhi reach.PFV

‘He reached Delhi close to eleven o’clock’

Confusion with COMPARISONREF \rightsquigarrow LOCUS. The difference between APPROXIMATOR and the more literal COMPARISONREF \rightsquigarrow LOCUS can be clearly defined by syntax, although it does have a semantic element.

When the number marked by the approximating postposition is a predicate with the copula, then it is COMPARISONREF \rightsquigarrow LOCUS (since it is comparing an unknown value to a point or points on a scale). If it is modifying an NP, then it is APPROXIMATOR.

Some examples of COMPARISONREF \rightsquigarrow LOCUS follow.

(218) *iskī qīmat pāñc se sāt lākh ke_bīc hai*
3SG.GEN cost five ABL seven lakh between COP.SG
‘The cost of this is between five to seven lakhs (five to seven hundred thousand).’

(219) *ūñchāī 5 mīṭar se_kam nahīm honī cāhiye*
height 5 metre less.than NEG COP.INF ought
‘(The) height should not be less than five metres.’

4.5 ENSEMBLE

ENSEMBLE by itself is rare in Hindi, rather expressed through compounding (two adjacent words in one NP) or a conjunction such as *aur* ‘and’.

Verb arguments that are inanimate and marked with a postposition or case marker similar to English *with* are ENSEMBLE \rightsquigarrow ANCILLARY.

(220) *mujhe cāval ke_sāth dāl cāhiye.* (ENSEMBLE \rightsquigarrow ANCILLARY)

If, however, these can be better interpreted as one whole NP (with the postposition-marked term being a UD *nmod* to the head), then plain ENSEMBLE applies.

4.6 COMPARISONREF

COMPARISONREF is typically marked by *se* (ABL) ‘than’, *jaisā / ke_jaisā* (‘like’, comparing NPs), and *jaise / ke_jaise* (‘like’, adverbial). The latter two are also equivalent to *kī_tarah* and *kī_bhāñti*.

(221) *dahī cāval se acchā koī khānā nahīm hai.*
curd rice ABL good any food NEG COP.PRS
‘There is no food as good as curd–rice.’

- (222) ek citra hazār śabdōñ **se** bahtar hai.
 one picture thousand word.PL.OBL ABL beter COP.SG
 ‘A picture is better than a thousand words.’
- (223) mujh **jaisā** admī
- (224) **mere_jaisā** admī
- (225) **uskī_jagah** yah cāhiye.
 3SG.in.place.of 3SG wanted
 ‘I want this instead of that.’

Sufficiency/excess. **ke_liye** handles sufficiency/excess comparisons, and is labelled **COMPARISONREF**→**PURPOSE** in such a usage (Fortuin, 2013, 60).

- (226) skūl jāne **ke_liye** vah kāfi barā hai (**COMPARISONREF**→**PURPOSE**)

Adverbial. The adverbial **jaise** / **ke_jaise** can be read as either indicating an analogy (**MANNER**→**COMPARISONREF**) or a conclusion (**THEME**→**COMPARISONREF**). The latter reading is especially likely for experiencer verbs (e.g. *lagnā* ‘to seem’), in which case one can try paraphrasing with a complementiser: *lagtā hai ki...* If the paraphrase works, then the conclusion reading is more salient.

- (227) **THEME**→**COMPARISONREF**:

- a. aisā lagā **jaise** vah jhūṭh bol rahā hai.
 like.this feel.PFV like 3SG lie say CONT COP.PRS
 ‘It seemed like he was lying.’
- b. lagā ki vah jhūṭh bol rahā hai.

- (228) **MANNER**→**COMPARISONREF**:

- a. aisā lagā **jaise** pūre deś kā khānā khā liyā
 like.this feel.PFV like whole.OBL country GEN food eat take.PFV
 hai.
 COP.PRS
 ‘It felt like I ate the whole country’s food supply.’
- b. #lagā ki pūre deś kā khānā khā liyā hai.

Implicit comparison. Implicit comparison (instead of a direct comparison of an attribute) is also indicated **COMPARISONREF** (Bhatia et al., 2013b).

- (229) us nibandh **ke_muqāble** ye nibandh lambā hai.
3SG essay against 3SG essay long COP.PRS
'In comparison to that essay, this essay is longer'
- (230) zindagi **ke_banisbat** gulāmī pyārī hai?

4.7 **RATEUNIT**

This is rare in Hindi, and is only directly expressed by the high-register **prati** (in Hindi, a Sanskrit borrowing) and **fi** (in Urdu, a Perso-Arabic borrowing).

- (231) **prati** vyakti
(232) **fi** šaxs

4.8 **SOCIALREL**

The genitive **kā** marks **SOCIALREL**~**GESTALT**. Note also that some verbs (e.g. *dostī karnā* 'to befriend') license their arguments as **SOCIALREL**.

- (233) ā gayā **terā** bhāī
come go.PFV 2SG.GEN brother
'Your brother has come.'
- (234) pikcar abhī bākī hai **mere** dost!
- (235) **merī** jān sabse pyārī hai.

5 **CONTEXT**

5.1 **FOCUS**

The traditional emphatic particles (**hī** 'only', **bhī** 'also', **to** contrastive, and some uses of **tak** 'even') are all labelled **FOCUS**. They are postposition-like, in that they place emphasis on the preceding element in relation to its governor.

- (236) mair̄ **hī** ghar jāūngā.
(237) tū **to** ghar nahīr̄ jāegā.
(238) Rāhul, nām **to** sunā hī hogā.

6 Special labels

6.1 DISCOURSE (`d)

When uses quotatively, **ko** and **ke_liye** are labelled `d. These are equivalent to the English infinitival *to*, hence we agree with the labelling of [Schneider et al. \(2020\)](#).

(239) usne jāne **ko** kahā.
3SG.ERG go.INF.OBL DAT say.PFV
'He said to go.'

(240) vah tumse bāt karne **ke_liye** bolā.
