ABSTRACT

Mom vloggers, stay-at-home moms streaming their daily life through short videos, suffer from both intensive motherhood and heavy digital work, yet receive little attention from researchers and designers. Toward understanding mom vloggers' motivations, practices, and challenges, we present exploratory results of an interview study (N=4) situated in China. Financial return, recording life and seeking agency/identity are found to be main motivators for mom vlogging. Revenues gained from advertising/selling products may make up for the decrease of income after leaving their paid employment, and together with the support and feedback from viewers, our participants' worth-based self-esteem is fulfilled. Typical challenges associated with mom vlogging include privacy leakage, invisibility of videos in early stage, and intensive digital work. Based on the findings, we propose design implications to accommodate the needs of mom vloggers.

Keywords Mom vlogging · Short video · Intensive motherhood

1 Introduction

Recently, there are increasingly more mom vloggers posting their home- and baby- caring experiences on Chinese social/streaming media such as Douyin² and Xiaohongshu³. They use videos to portray their daily lives in different aspects, such as cooking, cleaning house, childcare, and family issues. In this paper, we define "mom vlogging" as such streaming/video sharing practices around life-oriented content by stay-at-home mothers. Different from mom bloggers [1] in previous research, we focus on video platforms instead of text-based blogs and social media. Though video sharing platforms are prevalent nowadays, and there are a bunch of papers on short videos [2] and their practical value for life [3], little attention has been paid to mom vloggers.

Intensive motherhood is a common issue in China and around the world [4]. Women, instead of men, are always the ones to leave paid employment, head home, and take child-care responsibilities. The situation is more extreme in China, with many housewives and working moms doing all the housework and childcare and receiving little help from their partners [5, 6]. Such a phenomenon is often called "widowed parenting," and has led to heated discussion online, yet receives limited attention from the academic community. When we searched for mom vlogs on short video sharing platforms in the observation phase, we often noticed such intensive motherhood, with streamers doing housework and taking care of their children all day long without any help of their partners. Mom vlogging may thus serve as ideal lens to understand intensive motherhood in Chinese society.

*The first two authors contribute equally to this paper.

³<https://www.xiaohongshu.com/>

Further, given the heavy life burdens and overwhelming child-care responsibilities, moms hardly have time to make friends in real life, as revealed by some in their vlogs. Online self-disclosure and the follower community may serve as an alternative for them to obtain empathetic responses and fill their social vacuum. In 2020, 21.8% of Generation Z moms did not have paid employment [7]. While it is relatively hard for stay-at-home moms to return to work after “heading home,” by becoming an influencer with a relatively large fan base on social media platforms, they can have an income by advertising and selling certain products. By having an income, as well as providing practical suggestions and experience to other moms, their worth-based self-esteem may be satisfied [8] with attention and support from both family and viewers.

Toward understanding the motivations and practices of mom vlogging, and informing better designs to accommodate mom vloggers’ needs, we conducted semi-structured interviews (N=4) with mom vloggers on Douyin and Xiaohongshu. Specifically, we proposed two research questions:

- Why do mom vloggers post their daily life experiences online? [motivations]
- What challenges do they encounter during self-disclosure? [challenges]

Through the study, we found that main motivators for mom vlogging included making money, recording life, and avoiding being trapped in family life. While leaving paid employment inevitably leads to the decrease of family income, our participants with a relatively large fan base can earn money by advertising and selling products. While they all report the intensive labor required as a stay-at-home mom, being a mom vlogger enables them to realize their own value in addition to that of a mom and a wife. Housework, pregnancy, education, family life, and product recommendation are most common themes in their videos, which viewers, who are often also moms, find easy to identify with.

Though mom vlogging enriches the life of stay-at-home moms, various challenges are identified by our participants. They all strive to gaining more views, which is harder for novice vloggers. Intensive motherhood and digital work sometimes exhaust our participants. Other challenges include privacy concerns, platform issues (clickbaits and censorship), personal attacks, socialization, as well as live-streaming specific challenges.

The contributions of this paper are thus two-fold. Firstly, we present an empirical understanding of Chinese mom vloggers’ practices and challenges. Secondly, we propose design implications to address challenges uttered by mom vloggers, toward building more usable streaming services for them.

2 Related Works

2.1 Streaming: From Live Streaming to Short Videos

Early research on streaming was centered around game live streaming, which was a kind of real-time video social media that integrated traditional broadcasting and online gaming [9]. A study on Twitch⁴ viewers identified six motivations for live-stream engagement, namely, social interaction, sense of community, meeting new people, entertainment, information seeking, and a lack of external support in real life [10].

Live streaming has been especially popular in China [11]. People watched live streams for various purposes, including relaxing, being attracted by certain streamers, killing time, making friends, communicating with others, sharing point of view, finding a community, and gaining new knowledge. Favored content included sharing personal experiences, performance, knowledge sharing, video gaming, outdoor and travelling, and E-commerce.

Short Videos, like those shared on Douyin/TikTok and Kuaishou, were rapidly gaining attention in recent years [2]. They were particularly popular among the younger Millennials and Generation Z. TikTok was the most downloaded app in 2020, with global downloads of 850 million, considering both Apple and Android downloads [12]. Even the huge live streaming industry in China has been influenced by short video sharing mobile applications, with people being drawn away from watching live streams to watching short videos [13]. People were found to use Douyin for entertainment, keeping up with “fashion”, and informational and practical needs.

Everyday use of streaming services has been extensively studied. For example, people watched foodshow, i.e., food related short videos to serve their daily life needs, including eating, sleeping, and emotional adjustment [3]. Wadley et al. found that students actively and routinely used music streaming services to manage their emotional responses to the challenges of studying abroad [14]. Generally, people use streaming services for their own needs, which echoes well with the uses and gratifications theory (UGT), which is an audience-centered approach to understanding mass

⁴<https://www.twitch.tv/>. Twitch is an American video live streaming service that focuses on video game live streaming.

communication [15]. Instead of questioning “what does media do to people?”, UGT focuses on “what do people do with media?”

However, several issues and challenges are associated with streaming platforms. Exploitation of labor of Kuaishou streamers was reported in [16]: the app takes half of all the gifted money that a streamer receives, before transmitting the remainder to her. Thus these streaming apps simultaneously empower streamers with opportunities of money and social recognition, and dis-empower them with exploitation [17]. There has always been a compromise between self-disclosure and self-presentation when it comes to social media usage. While anonymity of the Internet encourages people to disclose their actual selves, other features of it, such as asynchronicity, multiple audiences, and published audience feedback, have discouraged disclosure [18]. On the one hand, people expect that disclosing more online leads to positive outcomes, such as the growth of close relationships [19]. On the other hand, social media users often tend to present an edited version of themselves that they believe will be best received by others [20].

2.2 Mom Blogging

While our investigation focuses on mom vlogging, a related notion is mom blogging [1]. Australian blogging mothers were found to negotiate their identities as mothers and move beyond their homes using social media. In this process, they could not only make some money, but more importantly, obtain a sense of belonging [1]. A survey study revealed five mothers’ motivations for blogging: developing connections with others, experiencing heightened levels of mental stimulation, achieving self-validation, contributing to the welfare of others, and extending skills and abilities [21].

Despite the many benefits mentioned above, there can be negative aspects to social media use for mothers of young children, e.g., addiction, depression, superficiality, and privacy concerns [22]. “Mumpreneur bloggers”, who earned a significant income from their personal brand and role as social media influencers, may use their families, particularly their young children, as characters in their story posts. These posts helped the audience identify with the bloggers, increasing their social capital and influence, though privacy concerns were inevitable [23].

With the prevalence of short videos, there are increasingly more mom vloggers on Chinese social media platforms which support short video sharing or livestreaming. Thus, it is worth studying the motivations and challenges of mom vloggers, and their differences to mom bloggers. While previous study on mom blogging has been situated in the Western context, we present an exploratory investigation of Chinese mom vloggers.

2.3 Gender, Motherhood and Feminist HCI

Intensive motherhood has long been a gender issue in China. Women need to seek a delicate balance between childrearing and their own work and life. They also have to face the conflict between their own perception of the ideal status of being a mother and motherhood expected by the family and the society. The gender division within family and the dominant motherhood ideology outside the family makes the conflict harder [24]. Hanser and Li argued that intensive, demanding forms of parenting extended into the earliest years of a child’s life, and suggested that the linkage between breastfeeding and motherhood represented a “gendered burden” for Chinese women [25]. There are further challenges faced by mothers, many of whom find themselves increasingly isolated and overwhelmed after giving birth to a new baby, leading to extreme stress, anxiety, and depression [22].

ICT has a long history of being used to help solve gender issues. While women have been historically disadvantaged in career compared to men, technology brought new jobs for them, e.g., web-girl. It not only opened door for self-presentation, but also enabled women to seek different roles as role makers [26]. The success of Xiaohongshu, a Chinese social media platform, has been known to stem from its emphasis on female consumption. Its culture concept, media convergence and marketing are highly connected with feminism [27]. We wonder whether the use of vlogging can serve mothers by relieving their mental burdens, providing them with socialization opportunities, etc.

3 Method

3.1 Recruitment

We recruited mom vloggers on Douyin and Xiaohongshu by direct messaging them, after searching with the keyword “mom vlogger” and watching many videos. By watching mom vlogging, we were able to familiarize ourselves with this specific genre of videos and ask more informed questions in later interviews.

Mom vloggers, especially those with a relatively large fan base, were naturally harder to recruit than viewers. We nevertheless strove to recruit 4 mom vloggers after sending nearly 100 messages.

Demographic information of these participants was summarized in Table 1. All but P1 had more than 10k followers, and their experience of mom vlogging ranged from 1 month to more than 1 year. P2 was a teacher on maternal leave, and other participants were stay-at-home moms at the time of this study.

<i>ID</i>	<i>Age</i>	<i>Platform</i>	<i>Education</i>	<i>Number of followers</i>	<i>Prior occupation(s)</i>	<i>Number of month(s)</i>
P1	30	Douyin	Bachelor	148	Taobao streamer, Chinese teacher, Content operation	1
P2	28	Douyin	Master	35k	Teacher	9
P3	33	Xiaohongshu	Master	12k	Yoga coach, Sport shop manager	15
P4	33	Douyin	Associate	33k	Business	5

Table 1: Demographic information of study participants (as of April 2022).

3.2 Interview

We started the semi-structured interviews by introducing the intention of this study and asking for participants’ consent. After asking background information such as family, education, profession, and life details, we went in-depth and asked about their mom vlogging experiences. Example questions included motivations and challenges of mom vlogging, attitude toward privacy leakage when presenting daily life, feedback from viewers, socialization, and income before and after mom vlogging.

One native Chinese speaker in the research team conducted the interviews via audio calls, except for one mom vlogger, who preferred to answer questions in text. The interviews were conducted between April and May 2022, and each lasted around 30 minutes. We recorded the interviews and used auto-transcribing tools provided by Sogou⁵ and Xunfei⁶ to produce rough transcripts. The research team then manually corrected errors.

3.3 Analysis

We analyzed the data using thematic analysis [28]. Two co-authors coded the interviews iteratively over the course of the project, and regularly discussed to reach a consensus. Example codes included making money (theme: motivation), privacy (theme: challenge), and reduced income (theme: housewife life). Mind-mapping tools were used to organize the codes and themes into a hierarchical structure. In the sections below, we will use anonymized quotes to illustrate our findings.

4 Findings

Through the analysis, we identified two main themes in the interviews, namely, heading home and mom vlogging. These two themes were highly related in nature: heading home was often the reason for mom vlogging for all our participants; or more precisely, had they not headed home, they would not start their mom vlogging careers. Thus, we will first report why they headed home, and what housewife/stay-at-home mom life was like, to contextualize later findings on mom vlogging practices.

4.1 Heading Home

Shani Orgad’s book “Heading Home: Motherhood, Work, and the Failed Promise of Equality” revealed the huge gap between the promise of gender equality and women’s experience of continued injustice. It turned out that even highly educated London women had to leave paid employment to take care of their children, while their husbands continued to work in high-powered jobs [4]. We hereby borrow the “heading home” notion, and examine why our participants choose to head home, as well as how their life is like after heading home.

4.1.1 Why Heading Home?

Our participants chose to head home and become “stay-at-home moms” for several reasons. They felt it hard to leave their children at home alone and wanted to provide more company for them at the early and important period of their life. Some supposed that they were better care givers than their husbands, and thus should be the ones to head home. Further, many noticed that they had no regret leaving paid employment.

⁵<https://rec.sogou.com/voice>

⁶<https://www.iflyrec.com/html/addMachineOrder.html>

Company for Babies. Some participants just wanted to accompany their children, possibly out of the human nature of mothers. P3 thought the first three years of her baby's life was very important, and she did not want to miss her baby's growth. The short maternity leave in China (128 days) was seen as too short for P3. She acknowledged that she may not quit her job if she had a longer maternity leave, say 1 year. Notably, P1 told the authors that her husband was allowed only 15 days for maternity leave. The difference in the duration of maternity leave between male and female employees revealed the social expectation of mothers as care givers.

Most of our participants wanted to raise children by themselves, instead of with the help of their parents. P1 held a different view of raising children than her mother-in-law, and she did not want to be absent when her child was growing up. She explained,

“Before, my mother-in-law was taking care of my kid. But I don't like her philosophy of raising children. Her behaviors are also not in a state that I'm satisfied with. So, I prefer to take care of my kid by myself... I hope to give him a good foundation of learning in kindergarten, and help him develop good study habits, which can save me a lot of worries after he goes to elementary school. Otherwise, I will spend more money and time to train and tutor him later. I don't think I can bear the loss of being absent in this stage of his growth, so I choose to become a stay-at-home mom.”

Similarly, P2 chose not to seek help from parents for raising her child. By becoming a mom vlogger, she was able to accompany her child and have an income at the same time, which was seen as an ideal situation for her:

“I'm able to accompany my child and earn some money as a vlogger at the same time. I major consideration is to accompany my child's growth. We don't want to ask our parents to take care of our child.”

“Women Are Better Caregivers.” We asked our participants why they were the ones heading home, instead of their husbands. Consistently, they perceived themselves as more qualified for home caring than their male partners. P3 acknowledged that her husband was ambitious in his career, while she was not, so she regarded their arrangement as natural:

“In my family, it's obvious that I like to take care of children more than my husband. He wants to achieve high in his career, but I'm never such an ambitious person. So, it's a natural choice for me [to head home].”

P1 believed she was the better choice to work-from-home and take care of her child than her “science geek” husband. In China, science geeks, who worked as engineers or scientists, were often described as poor at expressing emotion and caring for others. She said,

“My husband is a science geek. I can do short videos and take care of the baby at the same time. He doesn't know how to do vlogging, so it's hard for him to work from home and take care of the baby. So, I'm a better fit for this role. In addition, women are better at housework. So, I think we're making the right choice.”

Compared to the gender situation in England [4], media and policy depictions of women could only be more stereotypical in China. Women are repeatedly portrayed as good care givers. Though we cannot claim that our participants' self-recognition as good care givers are necessarily influenced by media and policy depictions, their opinions nevertheless have been interesting examples of stereotypical gender roles.

No Regret Quitting Jobs. Our participants seemed to have no regret for leaving the traditional workplace. For instance, P3 saw no mission and vision in her previous employment,

“I didn't expect much achievement in my job. I'm happy if I see a mission and a vision in my career, whether it be successful or not.”

Furthermore, their previous work experience was often relevant to their current mom vlogging career. For example, P1 had been an E-commerce streamer in Taobao before she headed home,

“I've been doing content-related jobs since I graduated... In June 2019, I became a Taobao e-commerce streamer, selling children's picture books. I'd do all the preparations from 8 or 9 in the morning, and then from 6pm, I officially start the streaming till midnight ... I did it for just a month, and I could earn more than 10,000. But I gave up because I thought it was not a sustainable way of development.”

Similarly, P2 was a teacher on maternity leave. Her expression ability was seen as a strength by her husband, a Douyin staff who encouraged her to be a mom vlogger at the beginning. She said,

“Because I’m a teacher, my expression ability is not bad. My husband feels that my expression is even better than average streamers on TikTok. Expressing myself is not so difficult for me, so he recommends me doing it.”

At the same time, P2 thought as a mom vlogger, she could earn more than as a teacher. She explained,

“I’ve just been a mom vlogger for a month, but my income has exceeded that of a teacher. To be honest, I think I’m underpaid as a teacher.”

4.1.2 What is Housewife Life Like?

Generally, our participants were satisfied with their current lifestyle as housewives, like P3 said,

“I prefer the current life. I have full control regarding what I do at a certain time. I’m also more relaxed emotionally. I don’t need to be responsible for the team I lead. I only need to be responsible for my baby.”

However, quitting jobs and becoming housewives or stay-at-home moms have inevitably brought changes/challenges to their life.

Reduced Income For those who just started their mom vlogging career, the income was hardly comparable to their previous paid employment. P1 acknowledged that her family income was sharply reduced since she quit her job, because she has not gained enough followers to have a profit out of advertising and selling products. The reduced income has changed her consumption behavior. She also felt more insecure about her family’s ability to face risks, and hoped to improve the financial situation by making progress in her mom vlogging career:

“When I’m not making money, I’d control my consumption, in a totally different manner than before... I’m worried that my family is more vulnerable to financial risks. If my husband is not doing well in his job, we may not be able to pay our house loan... But I’m doing a thing which I think is of great potential. If I persist, it may improve our family income one day.”

For other participants, given their large number of followers, they could have a good income by advertising and selling products, and thus had fewer financial concerns.

Intensive Labor. Our participants noted that housework was more labor-intensive than their previous jobs, without time for rest. What was worse, the labor was throughout the day. When we interviewed P1, she was interrupted by the crying of her baby several times.

P1 narrated a typical day to the author:

“I get up at 6 in the morning, make breakfast for my family, and send my kid to school. Then I do the housework, design, shoot and edit videos, and pick my kid from school. After playing with my kid outside, I make dinner, and edit videos.”

In the cases of all of them, we noticed the absence of husbands in housework or child raising.

Different Social Life. Social life could be quite different for moms after having a baby. Firstly, the frequency of social life may reduce, as in the case of P2 and P3,

“My social life was frequent before I had a baby, at least once a week. Now it’s more difficult for me to hang out with friends. I need to feed my baby all the time.” (P2)

“My friends are mostly my work partners in the previous job. I can’t see them now, so I have less of a social life.” (P3)

Moms also wanted to hang out with other moms, as P1 said,

“Since I had my baby, I would hang out with other moms, because we need to accompany our kids in weekends. We’d picnic and take a walk together.”

P3 also mentioned making more friends who were moms.

The decreasing opportunity for social life, as well as the need to meet more moms, may well motivate them to go on social media and identify a mom community to identify with.

4.2 Mom Vlogging

4.2.1 Overview

Thematically, our participants' mom vlogging was centered around housework (P1), pregnancy (P2), education (P3), family (P3, P4), and product recommendation (P2). They generally had good experience of mom vlogging, with a sense of identity and achievement for stay-at-home moms and mom vloggers. They were also supported by their family members, and a supportive follower community.

Sense of Identity and Achievement. Before P3 became a mom, she felt “stay-at-home mother” to be an awkward word, which she thought she would never identify with. This has changed after giving birth to her child,

“When I become a mom, I feel the huge responsibility of being a stay-at-home mom. Moms just should stay at home and accompany their kids. They should receive more respect. Now, when I introduce myself as a stay-at-home mom, I'm proud.”

All our participants saw mom vlogging as a job/career, as P3 said,

“I treated vlogging as a job, just like teaching. I take it very seriously.”

A sense of accomplishment was gained through sharing skills with novice moms (P2), and making followers feel encouraged and become less anxious and more peaceful in raising children (P3). P2 told the author that many new moms would consult her for experience.

Supportive Family and Followers. Our participants received much support from both their family and followers. P2's husband, who worked in Douyin, encouraged her to become a mom vlogger, and helped her by providing practical suggestions from an insider's perspective. In the case of P3, her parents were big fans of her, and were both in her chat group established for moms. Her husband also spoke highly of her career as a mom vlogger.

P1's family showed her support to some extent, though in a “have-to-support manner.” She said,

“My and my husband's parents are fine with me doing vlogging. My mother-in-law shows neither support nor objection... This is my own decision and I'll just do it, no matter what they think. Even if they support me, they can't buy me more visibility... My husband must support all my decisions.”

Given the relatively low degree of support received from her family, P1 told them that she would try vlogging for one year, as a challenge. If it did not turn out to be successful, she may consider returning to the workplace.

Followers showed support to mom vloggers by either directly uttering encouragement or providing suggestions regarding video content and duration. Mutual support was further demonstrated in fan groups, as in the case of P3. In her “mom group” of over 300 members, people would share experience, seek help, and do yoga together, both online and offline. Personal attacks and criticisms, though, were also found common in the interaction, which we will elaborate on in a later section.

4.2.2 Motivation

All the participants saw recording life as a main motivator for mom vlogging. For instance, the videos P2 shot featuring her baby's daily life were seen by her as a recording of growth. We also identified two more implicit motivations, namely, making money, and seeking a larger world.

Making Money. When a vlogger has reached a relatively large fan base (e.g., 1,000 in Douyin), s/he will be allowed to sell goods on streaming platforms. Businessmen would reach out to them via either acquaintances (P1) or direct messaging (P2) and collaborate with them to sell goods. By advertising and selling goods on their main pages and in vlogs, vloggers share 20% (P1) or 10%-35% (P2) of the profit. The platform would take 6% (P1) or 2% (P2) of the vloggers' income, which were perceived by them as acceptable. P4 would further use livestreaming to boost the selling. She did livestreaming for 2 hours each day and could earn from only several CNY to several hundred. P2 established a fan chat group to sell goods, particularly, to answer pre- and post- selling questions. P3 mentioned the

existence of some dishonest vloggers who advertised products which they have not tried by themselves and were of low quality.

In addition to product advertising/selling, P3 would organize online and offline yoga workshops to profit, given her relatively large fan base and personal interest in yoga.

Seeking a Larger World. Inevitably, stay-at-home moms can be cut off from the outside world and swamped by housework and family life. They often have the need to seek their identity other than that of a wife and a mom. In the process of becoming a mom vlogger, P4 has gained a sense of accomplishment and identity,

“I just want to realize my ideal and value other than that of a good wife and a good mom. I need a source of spiritual sustenance other than my husband and kid.”

It was a similar case for P3. She told the authors that moms would find and encourage each other,

By being a vlogger, I’m not trapped in family anymore. Before, it seemed the only things in my life have been my husband and kid, and my dog. My world became smaller. Moms would search such a circle or group and encourage each other.

4.2.3 Challenges

Our participants perceived no technical challenges when making or uploading videos, like P1 said,

“I don’t think there’re many technical stuffs. If you ask a movie director, he’ll also say that the most important thing is the content, instead of technical stuffs. So, I think it’s more important to think about engaging content.”

P2 shared this opinion,

“Most of the challenges aren’t about the platforms. It’s easy to edit videos. The challenges are mostly subjective, like how to increase the views.”

The various challenges faced by these mom vloggers included the difficulty of getting more views, achieving a balance between mom vlogging and housework, privacy concerns, platform issues, personal attacks from viewers, socializing, pandemic, and lack of gifting from followers. In this section, we will elaborate on these challenges, as well as counter measures of the participants if there are any.

Striving for More Views. Gaining more views was a common challenge for our participants. This was especially true for novice streamers like P1, who had relatively few followers compared to other mom vloggers,

“At first, there were only a few views for each video, and I would worry that my account wouldn’t survive. Later, I started to think about how to gain more followers, and I started to reflect on current drawbacks and learn how to make short videos.”

P4 was a more established vlogger with 33 thousand followers. She recalled how the low number of views upset her before her career took off,

“The process is not easy! In the first week there were only a few hundred views for my videos. I was excited by every new follower. It was especially upsetting to upload a delicate, time-consuming video clip, and receive few views.”

The number of views received by each video was not even unpredictable, due to the black-box nature of the recommendation system. P2 complained that, often, videos perceived as of high quality was not seen by many, which was frustrating to her. She compared the unpredictable nature of mom vlogging to her job as a teacher:

“As a teacher, my outcome is controllable. If I’m more responsible, I can directly see the improvement of my students’ grades, though the degree and speed may vary. But Douyin has so many factors, and you can hardly succeed on your own. You think your videos are good and heart-touching, but there’re just no likes or comments. So, it’s frustrating sometimes.”

Our participants showed different strategies of gaining more views. P2 did so by polishing up content quality. Relevance of content was seen as a key for attracting views, as told by P1,

“People may face these issues in daily life, but don’t know how to solve them. I can resolve their confusions with my videos. Familiar content can facilitate more interaction.”

For P4, the secret was content uniqueness from other vloggers,

“In addition to good luck and perseverance, another important thing is how your content is different from other vloggers’. You could get up early and make all kinds of food for breakfast. I can do that as well, but I don’t want to waste food. So, my breakfast videos enjoy fewer views.”

Controversial topics or negative experiences may also help expose videos to a broader audience but were not preferred strategies by our participants. For example, P4 explained,

“I just want to share the happiness and ‘positive energy’ in life. I don’t want to lose myself for some [financial] purpose.”

Intensive Motherhood and Digital Work. As illustrated before, these mom vloggers had to do housework and baby-care throughout the day. The work of being a vlogger was no easier. It took P4 two to three hours to make each video clip. P2 described how mom vlogging and interacting with followers/viewers stretched her too thin:

“I treat it as a job, and I feel obligated to be responsible. So, I gotta check viewers’ comments frequently. It took up much of my free time. I personally hate it, but I have no choice. One of the advantages of being a vlogger is actually being able to utilize your free time... I also need to keep my fan group active.”

It was hard for all our participants to balance the intensive motherhood and digital work. They shared several strategies managing to achieve the balance. All saw parenting as a priority, and only did mom vlogging in their free time. P1 said,

“If I don’t have time in a certain day, I won’t do mom vlogging.”

She further treated mom vlogging as a recreation, and with this perception of her current career, she felt less of a burden.

P3 tended to used text posts to substitute video clips, which were more time-consuming. She explained,

“I rarely posted videos because they take too much of my time. I’d prefer posting in text. I have a schedule for each day, and I won’t leave my child alone for a consecutive three hours.”

She also showed care for herself, instead of suffering from intensive motherhood,

“If I find myself not in a good state, I won’t force myself to have quality time with my kid. I’ll ask my husband or nanny to take care of him/her, so that I’ll have time to relax and recover. Then I can take care of him/her.”

Outsourcing part of the vlogging/housework was a strategy shared by P2 and P3, who were middle-class women and in relatively good socioeconomic status. P2 hired a part-time assistant to edit the videos after she shot them. P2 and P3 both hired a nanny to do the housework, and they only needed to take care of their children, make videos and record their lives.

Privacy. Our participants displayed varied attitudes toward privacy. P1 did not want her acquaintances in real life to find her vlogging account, at least “before her career was a success.” She elaborated,

“When I was not successful as a vlogger, they would doubt me. But after I make it, I won’t have this concern, though I don’t want them to envy me or something.”

She posted about her family life very selectively, and would not share negative content, such as quarrels with her husband. She thought it immoral to “solve family issue by posing the pressure of public opinion on family members.”

Other participants showed less concern about privacy violation or self-presentation in front of acquaintances. For example, P2 saw mom vlogging as a way of creating a “bigger and broader friend circle,” and for her, the financial gain outweighed privacy. P3 thought her online image was not different from what she was offline, so she did not worry about being seen by acquaintances. Her tolerance of privacy violation could be further attributed to her personal experience,

“I was not a popular person in school, so I find a sense of belonging on social networks. Since I studied abroad, I’ve started to share my life online, and I can find more connections here than in real life. I even meet many of my friends online. So I regard [online sharing] as a default, and don’t see it as a privacy violation.”

Platform Issues. Several platform issues were raised by P3. There were many clickbaits teaching mothers how to take care of their babies “easily,” which was not easy at all. Such content could lead to peer pressure and anxiety of novice moms, she noted.

Censorship was probably the most severe and annoying issue perceived by P3,

“One time, I posted a breast-feeding picture on Xiaohongshu. I didn’t show any part of my body, but I was warned of violating the community rule. I once wrote, I wanted my baby to ‘freely exercise,’ and it was censored, since it also means ‘liberty movement’ in Chinese, which is a sensitive word in China. I was also prohibited from posting my Wechat account in Xiaohongshu. I was hoping to establish a Wechat group for moms.”

Personal Attacks. Personal attacks were sometimes targeted toward mom vloggers, or their babies and family, which negatively affected their mood/feeling. For example, P2 shared her own experience,

“Most mom vloggers would receive kind comments and likes and following. But no one is perfect, and no one can be liked by everyone. Sometimes I receive personal attacks. I don’t think I’m powerful enough inner inside to neglect these comments. I’m hurt, but after a while, I’m fine. There are just all kinds of people online.”

Viewers may also doubt how the mom vloggers raised their children, as observed by P3 in her own case,

“I have a highly spread video clip featuring my son eating noodles. I thought it to be funny, so I shared it. My son ate by himself and put quite some noodles in his mouth. Those moms who were for letting kids eat by themselves also thought it to be funny. But those who weren’t would criticize me for letting such a little kid feed himself. ‘He would choke.’ ‘Why do you let him eat this?’ ‘The parent is irresponsible.’ Something like that.”

Some participants took a blunting approach [29] when being attacked, i.e., they preferred to look over the attacks than confronting the attackers. For instance, P2 said,

“We’re adults. I don’t think it necessary to be affected by strangers’ remarks.”

P1, on the other hand, directly replied to the Douyin user who criticized her for picking vegetables late at night:

“He was like, ‘why do you choose to be a night ghost instead of a human being?’ That’s strange. I told him that there’s not a set rule for everyone to behave well... You know, different people have different ideas and thoughts. Emotions can be amplified to a large extent through the screen.”

Socializing. Our participants found it difficult to socialize with other mom vloggers. P2 thought information asymmetry was seen as important by successful vloggers, and was one key barrier to socialization,

“It is relatively hard to make friends on this platform. I haven’t direct-messaged other mom vloggers. I personally feel they’re not willing to share how they succeed.”

Surprisingly, though our participants mentioned the decreased frequency of social life after becoming moms, most of them did not seek to make friends through mom vlogging.

Challenges Related to Live Streaming. P1 was once a Taobao live streamer before becoming a mom, but now she did not live stream, because she did not have enough time. P2 was thinking of starting livestreaming given her large fan base, but her plan was interrupted by the ongoing pandemic and inhuman lockdown policy in Shanghai [30],

“I haven’t started livestreaming because of the pandemic. No products can be delivered to me. The delivering service is completely stopped. I’ll start livestreaming once the situation is better in Shanghai.”

She speculated that she would not earn much money through gifting [31], a mechanism where viewers would send virtual gifts to streamers,

“Beauty-, humor- or skill- related livestreaming are more likely to benefit from gifting. Mom live streamers use live streams to sell products... The majority of audience are also moms. They spend all their money on babies. Who would give you gifts?”

5 Discussion

5.1 Summary of Findings

Our participants headed home and became stay-at-home moms to accompany their children. They perceived themselves to be better caregivers than their partners and felt no regret quitting their jobs. Several changes were noticed after heading home, including reduced income, intensive labor, and less socialization opportunities.

They became mom vloggers for three motivations: recording life, making money, and seeking a larger world. These benefits brought by mom vlogging well served the stay-at-home moms, who earned much less after leaving their paid employment, and were swamped by intensive housework and baby care. By mom vlogging, they were able to “realize their ideal and value other than that of a good wife and a good mom,” both financially and mentally.

They received much support from their family and viewers, which encouraged them to persist in their mom vlogging careers. The “mom group” established by P3 had over 300 members, who would share experience, seek help, and do yoga together, both online and offline, demonstrating a supportive online mom community.

A large abundance of challenges associated with mom vlogging, though, were reported by our participants, which we postpone to the next section.

5.2 Challenges and Design Implications

Visibility of videos is a major challenge for novice vloggers, and the black-box nature of recommendation systems further makes it impossible to predict how much people will view a certain vlog. In P2’s case, those videos perceived as of high quality for her were not viewed by many, which made her frustrated. Different strategies were shared by our participants, such as improving content quality, relevance, and uniqueness. As we can see, the topics covered in their videos include housework, pregnancy, education, family, and product recommendation, with which other moms can easily identify with.

Motherhood and digital Work both require intensive labor from our participants. Making high-quality videos and actively interacting with viewers, both of which take great effort, are necessary to establish a successful mom vlogging career. For example, those mom vloggers who want to have an income out of advertising/selling products have to answer pre- and post- sales questions in fan groups. Most of them see parenting as a priority and would save time/energy by using text to replace videos or outsource some part of the vlogging/housework.

Privacy perception varies among the participants. For some, sharing online is preferred compared to making offline friends. For others, sharing online is regarded as an activity which requires caution, and they selectively post about their life. They are intrinsically trying to present an edited version of themselves which they believe will be best received by others [20].

Clickbait and censorship are common issues of streaming platforms as reported by our participants. Clickbait emphasizing “easy steps of childcare” can bring anxiety and peer pressure to new moms. The prevalence of censorship is not surprising, because China has long been known to pose one of the strictest censorships on Internet speech in the world [32].

Our participants took either a blunting approach (ignoring) or a monitoring approach (confronting) to deal with personal attacks, criticism, and judgment from viewers. While there have been no rule-of-thumb methods to deal with toxic speech online, a previous study on effective strategies of handling harassment toward game live streamers suggests that ignorance of harassment could perpetuate stereotypes that led to harassment of more streamers, showing ineffectiveness of the blunting coping style [33]. Platforms thus should design and deploy mechanisms to, or help vloggers to, identify and remove personal attacks.

Socialization is found hard through mom vlogging. As our participants suggest, successful vloggers are seldom willing to talk to novice ones and share their experience. At the same time, socialization is also not a main motivator for them to do mom vlogging. Instead, they rely on mom vlogging to record life, make money, and fulfill their value.

5.3 Limitation and Future Work

There are two main limitations of the current exploratory study of mom vlogging practices in China.

Firstly, given the exploratory nature of this study and the relatively small sample size (N=4), we do not claim to generalize our findings to a broader mom vlogger population. Rather, we want to present an early observation of Chinese mom vloggers who have received little attention before and inspire future ethnographic study of and design for them.

Secondly, while we notice rich mutual-help dynamics among moms, our interview data cannot generate more empirical findings, and an observational study of the mom vlogging community is needed.

6 Conclusions

With an exploratory interview study of mom vloggers in China, we uncovered their motivations, practices, and challenges of mom vlogging. Our participants become mom vloggers to record life, to make money, and to seek a sense of achievement and identity. Despite the benefits, many challenges were identified by them, including the difficulty of getting more views which is unpredictable, achieving a balance between intensive mom vlogging and intensive housework, privacy concerns, personal attacks from viewers, etc. By proposing practical design implications and future research directions, we aim to provide a better environment for mom vloggers to express themselves and realize their personal values.
